North African Cretaceous Carbonate Platform Systems:

North African Cretaceous Carbonate Platform Systems Eulàlia Gili, Mohamed El Hédi Negra, Peter W. Skelton, 2012-12-06
This volume arises from the NATO Advanced Research Workshop ARW on North African Cretaceous rudist and coral formations and their contributions to carbonate platform development which was held in Tunisia on 13-18 May 2002. It was convened by M. El Hedi Negra (Université 7 Novembre de Carthage, now Université de Tunis El Manar, Tunisia) and Eulalia Gili (Universitat Autònoma de Barcelona, Spain). The aims of the ARW were 1) to review and critically assess currently available data on rudist coral formations in North African Cretaceous carbonate platforms and their correlations and to integrate these data with other studies around the Mediterranean; 2) to place the findings in a global context, noting both similarities with other regions of platform development as well as local differences; and 3) exploring possible reasons for these and to help promote the creation of a vibrant peri-Mediterranean collaborative research community embracing researchers from the entire region to carry forward this ambitious research programme. Twenty-two presentations (oral and poster) provided both topical reviews covering rudist evolution and ecology, mineralogical changes, applications of strontium isotope and graphic correlation methods and platform typology as well as regional syntheses: Tunisian reservoirs, Moroccan platform history, Tunisian platforms and rudist coral facies, Algerian platforms and Egyptian platforms. Fifteen of these presentations are expanded here as papers. The workshop was attended by 24 academic staff, 4 geologists from the oil industry plus several observers and students.

Cretaceous Rudists and Carbonate Platforms Robert William Scott, 2007

Cretaceous Project 200, Volume 2: Regional Studies M.B. Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M.

Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers from an exceptionally wide geographical area that reflects the varied geological features of Cretaceous strata and the enclosed faunas and floras There are geological accounts of areas from the Arctic to the Antarctic Peninsula onshore and offshore environments as well as some terrestrial environments with newly described floras and faunas The application of stable isotope geochemistry to stratigraphical problems and the identification of cyclostratigraphy features quite prominently in many of the areas described Controls on Carbonate Platform and Reef Development Jeff Lukasik, Juan Antonio

Simo, 2008 Carbonate platforms and reefs emerge grow and die in response to intrinsic and extrinsic mechanisms forced primarily by tectonics oceanography climate ecology and eustasy These mechanisms or controls create the physical biological and chemical signals accountable for the myriad of carbonate depositional responses that together form the complex depositional systems present in the modern and ancient settings If we are to fully comprehend these systems it is critical to ascertain which controls ultimately govern the life cycle of carbonate platforms and reefs and understand how these signals are recorded and preserved Deciphering which signals produce a dominant sedimentological response from the plethora of physical and biological information generated from superimposed regional to global scale controls is critical to achieving this goal With this understanding it may be possible to extract common time and space independent depositional responses to specific mechanisms that may ultimately be used in a productive sense Extensive research on a wide variety of carbonate platform and reefal systems in the past few decades has provided the foundation and understanding necessary to take carbonate research to a new level With assistance from rapidly advancing computer software and an increasing use of cross disciplinary integration carbonate research is shifting from description and morphological analysis towards a science that is more focused on the assessment of process and genetic relationships The aim of this special publication is to present a cross section of recent research that shows this evolution from a variety of perspectives and scales using examples distributed throughout the Phanerozoic **Tectonics of the Western Mediterranean and North Africa** G. Moratti, A. Chalouan, 2006

This book provides an updated insight into the overall tectonic evolution of the Western Mediterranean region and North Africa The tectonic setting of the region reflects a long lived and complex evolution mainly related to the Alpine Orogeny This inheritance is expressed by an intricate pattern of arc shaped mountain chains the Alps the Betic Rif Cordilleras and the Apennine Maghrebian belt whose southern branches mark the present limit between the African and Eurasian plates The volume covers the Maghrebian chains in North Africa from Tunisia to Morocco and the Western and Central Mediterranean

contains over 2500 references Evolution Of Global Crustal Uplift And Depression, The: Changes Of Sea And Land Yuzhu Kang,Zhihong Kang,Zhijiang Kang,Jiwei Wang,2024-03-14 The dynamic mechanism of plate tectonics remains a reasonable theory but one with shortcomings such as insufficient bases for plate division unclear plate boundaries and unclear geological characteristics This book proposes that the world's continents should not be divided by plates and that their formation is not due to plate tectonics but rather due to global crustal uplift evolution and sea land evolution This proposal is based on the authors broad theoretical foundation and comprehensive professional knowledge built up over more than ten years of in depth research by many scholars on the evolution of the Earth's continents In this book many case studies are better explained by global crustal uplift and sea land evolution Namely that the entire continents of the world are indivisible and the changes of each land block over geological periods resulted from the sea land changes The book further develops the original geomechanics theory created by the famous geologist Li Siguang As a vibrant and highly rigorous work Prof Li's book offered important theoretical guidance that enriched the global geological community and led to a re development within geological science The strong response highlights the significance of geomechanics theory and our theories that build upon it in this book **Inorganic Geochemistry** A. G. Robinson,2009-07-10 Petroleum is not as easy to find as it used to be In order to locate and develop reserves efficiently it's vital that geologists and geophysicists understand the geological processes that affect a reservoir rock and the oil that is trapped within it This book is about how and to what extent these processes may be understood The theme of the book is the characterization of fluids in sedimentary basins understanding their interaction with each other and with rocks and the application of this information to finding developing and producing oil and gas The first part of the book describes the techniques and the second part relates real life case histories covering a wide range of applications Petroleum geology particularly exploration involves making the best of incomplete results It is essentially an optimistic exercise This book will remove some of the guesswork Brings together the most important geochemical methods in a single volume Authored by two well respected researchers in the oil industry Real life international case histories **Regional Geology and Tectonics: Phanerozoic Rift Systems and Sedimentary Basins** David G. Roberts,2012-04-23 Expert petroleum geologists David Roberts and Albert Bally bring you Regional Geology and Tectonics Phanerozoic Rift Systems and Sedimentary Basins volume two in a three volume series covering Phanerozoic regional geology and tectonics Experience in analyzing and assessing rifts locations where the Earth's outer shell and crust have been stretched over time by seismic activity is critical for you as an exploration geologist in identifying Earth's most lucrative hydrocarbon locations in which extraction is both efficient and safe Vast compilations of related industry data present regional seismic lines and cross sections and summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings Named a 2013 Outstanding Academic Title by the American Library Association's Choice publication A practical reference for petroleum geologists that discusses the

importance of rift systems and the structural evolution of the Earth Analyses of active rifts in East Africa China Siberia the Gulf of Suez and the Russian Arctic provide immediately implementable petroleum exploration applications in regions heavily targeted by oil gas companies Presents overviews of sequence stratigraphy in rifts and structural controls on clastic and carbonate sedimentation critical to the exact mapping of the most lucrative hydrocarbon locations by exploration geologists

The Geology of the Arab World---An Overview Abderrahmane Bendaoud,Zakaria Hamimi,Mohamed Hamoudi,Safouane Djemai,Basem Zoheir,2018-09-21 This book is the result of the work of the first international congress of the ArabGU Arabian Geosciences Union which took place in Algiers Algeria in February 2016 It presents research articles and review papers on geology of the North Africa and Arabian Middle East It provides information to the public on various fields of earth sciences and encourages further research in this field in order to attract an international audience
