Cronk,Janice L. Fuller,2014-04-08 A practical guide to the protection and management of ecosystems against invasions by non indigenous plant species The authors seek to offer an accessible account of the subject and how to protect natural habitats The majority of countries suffer from invasive plants and there are case studies from North America Europe Australia South and South East Asia and the Pacific and Atlantic islands There is also a list of invasive species with their countries of origin and regions of introduction

A Handbook of Global Freshwater Invasive Species Robert A. Francis,2012-03-12 Invasive non native species are a major threat to global biodiversity Often introduced accidentally through international travel or trade they invade and colonize new habitats often with devastating consequences for the local flora and fauna Their environmental impacts can range from damage to resource production e g agriculture and forestry and infrastructure e g buildings road and water supply to human health They consequently can have major economic impacts It is a priority to prevent their introduction and spread as well as to control them Freshwater ecosystems are particularly at risk from invasions and are landscape corridors that facilitate the spread of invasives This book reviews the current state of knowledge of the most notable global invasive freshwater species or groups based on their severity of economic impact geographic distribution outside of their native range extent of research and recognition of the ecological severity of the impact of the species by the IUCN As well as some of the very well known species the book also covers some invasives that are emerging as serious threats Examples covered include a range of aquatic and riparian plants insects molluscs crustacea fish amphibians reptiles and mammals as well as some major pathogens of aquatic organisms The book also includes overview chapters synthesizing the ecological impact of invasive species in fresh water and summarizing practical implications for the management of rivers and other freshwater habitats **Life Out of Bounds** Chris Bright,1998 Bright a research assistant at the environmental educational non profit organization Worldwatch Institute describes and evaluates the spread of alien or exotic organisms that are destroying ecosystems around the world Annotation copyrighted by Book News Inc Portland OR *The Dictionary of Physical Geography* David S. Genetics, Evolution, and Biological Control Lester E. Ehler, R. Sforza, T. Mateille, 2003-12-03 Annotation This book has been developed from the keynote addresses delivered at the third IOBC International Symposium co organized with CILBA that was held in Montpellier in October 2002 to address recent developments in genetics and evolutionary biology as applied to biological control Chapters are organized around the following themes Genetic structure of pest and natural enemy populations Molecular diagnostic tools in biological control Tracing the origin of pests and natural enemies Predicting evolutionary change in pests and natural enemies Compatibility of transgenic crops and natural enemies Genetic manipulation of natural enemies The authors identify new issues for each of the major approaches in applied biological control These include the 1 use of molecular genetics to trace the origin of target pests in classical biological control 2 potential of mass reared transgenic agents in augmentative biological control and 3 compatibility of transgenic crops and natural enemies in conservational biological control
