The Neuroimmunological Basis of Behavior and Mental Disorders Allan Siegel, Steven S. Zalcman, 2008-11-09. For many years the immune and central nervous systems were thought to function independently with little or no interaction between the two. This view has undergone dramatic changes over the past three decades. Indeed we now know that there exists various feedback loops between the brain and immune systems that impact significantly upon different behavioral processes including normal behavior and mental disorders. Pioneering efforts in generating this change were initiated by a number of early investigators. Included were those whose efforts were directed at establishing neuroimmune connections as well as others whose research focused upon the relationship between immunity, cytokines and behavior. This book brings together outstanding scientists and clinicians who have made major contributions to the rapidly developing field investigating the relationship between immunity and behavior. The book is divided into three parts. The first part describes pathways by which the brain and immune systems communicate and interact with each other. In the chapter Cytokines and the Blood Brain Barrier provides insight into interactions between the blood brain barrier and cytokines. Such interactions underlie basic communication between the

immune system and brain that are present in normal as well as in disease conditions In the chapter Neu chemical and Endocrine Responses to Immune Activation The Role of Cytokines the neurochemical and endocrine consequences of immune challenge and cytokine administration on central neurotransmitter activity are discussed *Stories Rabbits Tell* Susan E.
