House,2015-05-31 Health care spending in the United States today is approaching 20 percent of GDP yet levels of U S population health have been declining for decades relative to other wealthy and even some developing nations How is it possible that the United States which spends more than any other nation on health care and insurance now has a population markedly less healthy than those of many other nations Sociologist and public health expert James S House analyzes this paradoxical crisis offering surprising new explanations for how and why the United States has fallen into this trap In Beyond Obamacare House shows that health care reforms including the Affordable Care Act cannot resolve this crisis because they do not focus on the underlying causes for the nation s poor health outcomes which are largely social economic environmental psychological and behavioral House demonstrates that the problems of our broken health care and insurance system are interconnected with our large and growing social disparities in education income and other conditions of life and work and calls for a complete reorientation of how we think about health He concludes that we need to move away from our misguided and almost exclusive focus on biomedical determinants of health and to place more emphasis on addressing social economic and other inequalities House s review of the evidence suggests that the landmark Affordable Care Act of 2010 and even universal access to health care are likely to yield only marginal improvements in population health or in reducing health care expenditures In order to rein in spending and improve population health we need to refocus health policy from the supply side which makes more and presumably better health care available to more citizens to the demand side which would improve population health though means other than health care and insurance thereby reducing need and spending for health care House shows how policies that provide expanded educational opportunities more and better jobs and income reduced racial ethnic discrimination and segregation and improved neighborhood quality enhance population health and quality of life as well as help curb health spending He recommends redirecting funds from inefficient supply side health care measures toward broader social initiatives focused on education income support civil rights housing and neighborhoods and other reforms which can be paid for from savings in expenditures for health care and insurance A provocative reconceptualization of health in America Beyond Obamacare looks past partisan debates to show how cost efficient and effective health policies begin with more comprehensive social policy reforms **Multicultural Psychology** Gordon C.

The Economic Status of the Hispanic Population Marie T. Mora,Alberto Dávila,2013-03-01 In 2010 Hispanics represented one out of every six people in the U S up from one out of eight in 2000 such that the economic status of this population has become increasingly important for the economic direction of the nation This volume brings together a group of scholars who analyze a variety of socioeconomic issues particularly those related to education poverty and health to assess how Hispanics have been faring relative to other Americans A common theme across the chapters is that Hispanics tend to lag behind non Hispanics with respect to their economic outcomes Despite this lag however some of the studies indicate that Hispanics have been making progress in terms of improving their relative economic position in recent years Several of the chapters also discuss policy implications The intended audience includes social scientists students policymakers and anyone interested in learning more about the economic conditions of Hispanic Americans Many of the authors employed rigorous statistical methods to analyze the economic status of Hispanics but the chapters were written to be accessible to a broad audience instead of one comprised mainly of quantitatively oriented academics **Culture, Brain, and Analgesia** Mario Incayawar,Knox H.
