## **Radar And Sonar:**

**Radar, Sonar, and Holography** Winston E. Kock, 2013-10-22 Radar Sonar and Holography An Introduction provides an introduction to the technology of radar and sonar Because the new science of holography is affecting both these fields quite strongly the book includes an explanation of the fundamental principles underlying this new art including the subjects of wave coherence interference and diffraction and of the hologram process itself Finally numerous examples are discussed which show how holography is providing new horizons to radar and sonar systems The book thus also provides a simple approach to the new technology of holography The discussions clarify the basic difference that exist between photography and holography on the one hand and between standard sonar and radar on the other and the hologram versions of these two technologies The book should be useful as a supplementary reading assignment to early college students in science and engineering and also to senior high students having a bent for science and engineering *Blip, Ping, and Buzz* Mark

Denny, 2007-10-16 Have you ever wondered how stealth planes achieve invisibility how sunken ships are found or how fishermen track schools of fish in vast expanses of ocean Radar and sonar echolocation a simple matter of sending receiving and processing signals Weaving history with simple science Mark Denny deftly reveals the world of radar and sonar to the curious reader technology buff and expert alike He begins with an early history of the Chain Home radar system used during World War II and then provides accessible and engaging explanations of the physics that make signal processing possible Basic diagrams and formulas show how electromagnetic and sound waves are transmitted received and converted into images allowing you to literally see in the dark A section on bioacoustic echolocation with a focus on the superior sonar systems of bats and whales and a discussion of the advanced technology of next generation airborne signal processors opens the imagination to fascinating possibilities for the future **Radar and Sonar Imaging and Processing** Andrzej

Stateczny, Krzysztof Kulpa, Witold Kazimierski, 2021-01-22 The Special Issue Radar and Sonar Imaging Processing is a collection of 21 articles exploring many topics related to remote sensing with radar and sonar sensors In this editorial we present short introductions of the published articles The series of articles in this SI deal with a broad profile of aspects of the use of radar and sonar images in line with the latest scientific trends while making use of the latest developments in science including artificial intelligence It can be said that both radar and sonar imaging and processing still remain a hot topic and much research in this area is being conducted worldwide New techniques and methods for extracting information from radar and sonar sensors and data have been proposed and verified Some of these will stimulate further research while others have reached maturity and can be considered for industrial implementation and development **Radar and Sonar** F. book discusses the concepts and techniques in the radar context but they are equally essential to sonar and to a wide range of signaling and data processing applications including seismology radio astronomy and band spread communications Organized into 15 chapters this volume begins with an overview of the principal developments sought in pulse radar This text then provides a discussion and analysis of a wide range of various modulation systems Other chapters consider the intrinsic Doppler resolving power of a radar system This book discusses as well the power illuminating a radar or sonar target that may be comprised of one or more discrete pulses The final chapter deals with the transmitter modulator circuits and valves This book is a valuable resource for electronic engineers and scientists

**Theory of Remote Image Formation** Richard E. Blahut, 2004-11-18 This book was first published in 2004 In many applications images such as ultrasonic or X ray signals are recorded and then analyzed with digital or optical processors in order to extract information Such processing requires the development of algorithms of great precision and sophistication This book presents a unified treatment of the mathematical methods that underpin the various algorithms used in remote image formation The author begins with a review of transform and filter theory He then discusses two and three dimensional Fourier transform theory the ambiguity function image construction and reconstruction tomography baseband surveillance systems and passive systems where the signal source might be an earthquake or a galaxy Information theoretic methods in image formation are also covered as are phase errors and phase noise Throughout the book practical applications illustrate theoretical concepts and there are many homework problems The book is aimed at graduate students of electrical engineering and computer science and practitioners in industry
