Radar Cross Section Measurements Eugene F. Knott, 2012-12-06 The original campus of the University of Michigan was nearly a perfect square about a half mile along a side A street sized walk appropriately called the Diag runs diagonally across this square connecting its southeast and northwest corners In 1904 a new engineering building was either started or finished I do not remember which to house classrooms When another engineering building was built on the expanded campus across the street from it many years later the old building came to be known as West Engine to distinguish it from the new East Engine Old West Engine is or maybe by now was a four story L shaped structure that stood at the southeast corner of the original campus It was built with an arch in it to straddle the Diag at the apex of the L You walked over the Engineering Arch to get from one leg of the L to the other if you were inside the building and you walked under it when you entered the campus from the southeast corner Affixed to the masonry wall of the arch was a plaque I often noted in passing It bore a quote attributed to Horace Greeley 1811 1872 who I did not know at the time was the founder editor and publisher of the New York Tribune It said simply Young man when theory and practice differ use your horse sense The suggestion seems worthy of an exclamation point instead of a period but I do not remember if it had one Radar Cross Section Eugene F. Knott, John F. Schaeffer, Michael T. Tulley, 2004-06-30 The leading text and reference on radar cross section RCS theory and applications this work presents a comparison of two radar signal strengths One is the strength of the radar beam sweeping over a target the other is the strength of the reflected echo sensed by the receiver This book shows how the RCS gauge can be predicted for theoretical objects Radar Cross Section Handbook George T. serves as a starting point for the graduate and research students scientists and engineers working in the area of low observables and stealth technology High Resolution Radar Cross-section Imaging Dean L. Mensa, 1991 With this book practitioners responsible for analyzing specifying or evaluating RCS imaging systems will be able to define performance limits using basic physical and mathematical principles Information on instrumentation systems for acquiring data and two new chapters on applications of new techniques are included The emphasis of the book is on imaging as applied to radar cross section measurements With it the reader will learn how to use the latest techniques to perform RCS imaging in laboratory or outdoor test ranges This book is suitable for self study or for use in a short course for practising engineers
