Concept Maps

A concept map is a visual organizer that can enrich students' understanding of a new concept. Using a graphic organizer, students think about the concept in several ways. Most concept map organizers engage students in answering questions such as, "What is it? What is it like? What are some examples?" Concept maps deepen understanding and comprehension.

Why use a concept map?

- It helps children organize new information.
- It helps students to make meaningful connections between the main idea and other information.
- They're easy to construct and can be used within any content area.

How to use a concept map

Note: It is important that teachers spend time introducing younger students to charts and diagrams prior to using this strategy.

There are several ways to construct concept maps. Most include the following steps:

1. Model how to identify the major ideas or concepts presented in a selection of text as you read.
2. Organize the ideas into categories. Remind students that your organization may change as you continue to read and add more information.
3. Use lines or arrows on the map to represent how ideas are connected to one another, a particular category, and/or the main concept. Limit the amount of information on the map to avoid frustration.
4. After students have finished the map, encourage them to share and reflect on how they each made the connections between concepts.
5. Encourage students to use the concept map to summarize what was read.

Trends and Prospects in Metacognition Research Anastasia Efklides, Plousia Misailidi, 2010-09-08 Trends and Prospects in Metacognition presents a collection of chapters dealing principally with independent areas of empirical Metacognition research. These research foci such as animal metacognition, neuropsychology of metacognition, implicit learning, metacognitive experiences, metamemory, young children's Metacognition, theory of mind, metacognitive knowledge, decision making, and interventions for the enhancement of metacognition have all emerged as trends in the field of metacognition. Yet the resulting research has not converged, precluding an integration of concepts and findings. Presenting a new theoretical framework, Trends and Prospects in Metacognition extends the classical definitions offered by Flavell and Nelson to carry the prospect of more integrated work into the future. By opening the possibility to cross the boundaries posed by traditionally independent research areas, this volume provides a foundation for the integration of research paradigms and concepts and builds on the relationship between metacognition and consciousness while integrating basic with applied research.

Developing More Curious Minds John Barell, 2003-02-15 After the September 11 attacks on the World Trade Center and Pentagon, many people questioned why no one had anticipated the terrorists' acts even when events and intelligence seemed to point toward them. John Barell wonders if the attacks speak to a greater societal problem of complacency. He believes many students have become too passive in their learning, accepting information and facts as presented in textbooks, classes, and the media. Drawing on anecdotes from educators and his own life, Barell describes practical strategies to spur students' ability and willingness to pose and answer their own questions. Antarctica expeditions, outer space discoveries, dinosaur fossils, literature, and more help define the importance of developing an inquisitive mind using such practices as Maintaining journals on field trips, Using questioning frames and models when reading texts, Engaging in critical thinking and problem-based learning, and Integrating inquiry into curriculum development and the classroom culture. To become habits of mind, students daily
