Life Strategies, Human Evolution, Environmental Design V. Geist, 2013-11-11 Consider that you were asked how to ensure human survival Where would you begin Conservation of resources jumps to mind We need to conserve resources in order that economic activities may continue Alas this is a false start Resources are always defined by a given economic system and only it determines what is and what is not a resource Therefore conserving resources implies only the perpetuation of the appropriate economic system Conservation of resources as we know them has nothing to do with the survival of mankind but it has very much to do with the survival of the industrial system and society we live in today We have to start therefore at a more basic level This level some may argue is addressed by ensuring for human beings clean genes Again this is a mistaken beginning It is thoroughly mistaken for reasons of science It is a false start because malfunctioning organs and morphological structures are not only due to deleterious hereditary factors but particularly due to unfavorable environments during early growth and development Moreover eugenics is not acceptable to any but a small fraction of society Eugenics may not be irrelevant to our future but is premature and should be of little concern until we understand how human genes and environment interact
