The Pleasures of Statistics Frederick Mosteller, 2010-03-10 From his unique perspective renowned statistician and educator Frederick Mosteller describes many of the projects and events in his long career From humble beginnings in western Pennsylvania to becoming the founding chairman of Harvard University's Department of Statistics and beyond he inspired many statisticians scientists and students with his unabashed pragmatism creative thinking and zest for both learning and teaching This candid account offers fresh insights into the qualities that made Mosteller a superb teacher a prolific scholar a respected leader and a valued advisor A special feature of the book is its chapter length insider accounts of work on the pre election polls of 1948 statistical aspects of the Kinsey report on sexual behavior in the human male mathematical learning theory authorship of the disputed Federalist papers safety of anesthetics and a wide ranging examination of the Coleman report on equality of educational opportunity This volume is a companion to *Selected Papers of Frederick Mosteller* Springer 2006 and *A Statistical Model* Frederick Mosteller's Contributions to Statistics Science and Public Policy Springer Verlag 1990 Frederick Mosteller 1916-2006 was Roger I Lee Professor of Mathematical Statistics at Harvard University His manuscript was unfinished at his death and has been updated

Issues in Mathematical Linguistics Carlos Martín Vide, 1999 This brief collection of refereed papers approaches several technical as well as methodological aspects of the mathematical formalization of natural language particularly in syntax and in semantics Such kind of investigation is a prerequisite for the computational processing of language and is narrowly related to current developments in other disciplines namely theoretical computer science and mathematical logic The volume offers a coherent picture of recent research on the mathematics of language and may be of interest to a wide audience from linguists to mathematicians Detailed indexes of authors and topics provide an easy access to

the contents *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1968 Includes Part 1 Number 1 Books and Pamphlets Including Serials and Contributions to Periodicals January June *A Statistical Model* Stephen E. Fienberg, David C. Hoaglin, William H. Kruskal, Judith M. Tanur, 2012-12-06 A large number of Mosteller's friends, colleagues, collaborators, and former students have contributed to the preparation of this volume in honor of his 70th birthday. It provides a critical assessment of Mosteller's professional and research contributions to the field of statistics and its applications. *Selected Papers of Frederick Mosteller* Stephen E. Fienberg, David C. Hoaglin, 2007-02-01 One of the best known statisticians of the 20th century, Frederick Mosteller, has inspired numerous statisticians and other scientists by his creative approach to statistics and its applications. This volume collects 40 of his most original and influential papers, capturing the variety and depth of his writings. It is hoped that sharing these writings with a new generation of researchers will inspire them to build upon his insights and efforts. Forms and Degrees of Repetition in Texts Gabriel Altmann, Reinhard Köhler, 2015-03-10 The present volume presents objective methods to detect and analyse various forms of repetitions. Repetition of textual elements is more than a superficial phenomenon. It may even be considered as constitutive for units and relations in a text on a primary level when no other way exists to establish a unit, as in a musical composition a motif can be recognised as such only after at least one repetition and on a secondary artistic level where repetition is a consequence of the transfer of the equivalence principle from the paradigmatic axis to the syntagmatic one as showed by R. Jakobson. The analysis of repetitive elements and structures in texts with objective mathematical means can serve several practical and theoretical purposes among them: Characterisation of texts by means of parameters, measures, indicators as taken from established mathematical statistics or specifically constructed ones in individual cases; Comparison of texts on the basis of their quantitative characteristics and classification of the texts by the results; Research for the laws of text which control the mechanisms connected to text creation. As a remote aim, the construction of a theory of text consisting of a system of text laws. The final attempt of every possible quantitative text analysis is the construction of a text theory. The book illustrates this on examples of such laws and corresponding empirical tests. **Information and Inference** Jaakko Hintikka, Patrick Suppes, 2012-12-06 In the last 25 years the concept of information has played a crucial role in communication theory so much so that the terms information theory and communication theory are sometimes used almost interchangeably. It seems to us, however, that the notion of information is also destined to render valuable services to the student of induction and probability of learning and reinforcement of semantic meaning and deductive inference as well as of scientific method in general. The present volume is an attempt to illustrate some of these uses of information concepts. In *On Semantic Information* Hintikka summarizes some of his and his associates' recent work on information and induction and comments briefly on its philosophical suggestions. Jamison surveys from the subjectivistic point of view some recent results in Bayesian Information Usage. Rosenkrantz analyzes the information obtained by experimentation from the Bayesian and

Neyman Pearson standpoints and also from the standpoint of entropy and related concepts The much debated principle of total evidence prompts Hilpinen to examine the problem of measuring the information yield of observations in his paper On the Information Provided by Observations Pietarinen addresses himself to the more general task of evaluating the systematizing explanatory power of hypotheses and theories a task which quickly leads him to information concepts Domotor develops a qualitative theory of information and entropy His paper gives what is probably the first axiomatization of a general qualitative theory of information adequate to guarantee a numerical representation of the standard sort
