artificial intelligence      **The Restoration of Dialogue** Ronald B. Miller, 1992-01-01 This book is intended as a remedy a bibliotherapy of sorts for a serious malady that afflicts the mental health professions themselves but that remains largely undiagnosed The disorder requiring urgent treatment is the splitting of clinical theory from its historical and logical foundation in Western philosophy the resulting inability to speak effectively about theoretical differences and the fragmentation into rival professions and theoretically isolated schools of treatment What is required as an antidote to this tendency toward a dogmatic schismatic and often cultist approach to clinical theory is the recognition of the philosophical nature of these theoretical disputes and the restoration of philosophical methods of analysis and dialogue to a central role in the development of clinical theory In this manner the energies that currently are invested in the protection of professional turf and ideological diatribe may be devoted instead to collaborative discourse research and action This is what will be required to make genuine headway in understanding that particular form of human misery and suffering that is variously called behavior disorders emotional disturbance problems in living or mental illness PsycINFO Database Record c 2004 APA all rights reserved      Moral Psychology Thomas Nadelhoffer, Eddy Nahmias, Shaun Nichols, 2010-10-18 Moral Psychology Historical and Contemporary Readings is the first book to bring together the most significant contemporary and historical works on the topic from both philosophy and psychology Provides a comprehensive introduction to moral psychology which is the study of psychological mechanisms and processes underlying ethics and morality Unique in bringing together contemporary texts by philosophers psychologists and other cognitive scientists with foundational works from both philosophy and psychology Approaches moral psychology from an empirically informed perspective Explores a wide range of topics from passion and altruism to virtue and responsibility Editorial introductions to each section explain the background of and connections between the selections      *Mind* John R. Searle, 2004-11-01 The philosophy of mind is unique among contemporary philosophical subjects writes John Searle in that all of the most famous and influential theories are false In *Mind* Searle dismantles these famous and influential theories as he presents a vividly written comprehensive introduction to the mind Here readers will find one of the world's most eminent thinkers shedding light on the central concern of modern philosophy Searle begins with a look at the twelve problems of philosophy of mind which he calls Descartes and Other Disasters problems which he returns to throughout the volume as he illuminates such topics as the freedom of the will the actual operation of mental causation the nature and functioning of the unconscious the analysis of perception and the concept of the self One of the key chapters is on the mind body problem which Searle analyzes brilliantly He argues that all forms of consciousness from feeling thirsty to wondering how to translate Mallarmé are caused by the behavior of neurons and are realized in the brain system which is itself composed of neurons But this does not mean that consciousness is nothing but neuronal behavior The main point of having the concept of consciousness Searle points out is to capture the first person subjective features of the phenomenon and this point is lost if we redefine consciousness in third person objective terms

Described as a dragonslayer by temperament John Searle offers here a refreshingly direct and open discussion of philosophy one that skewers accepted wisdom even as it offers striking new insights into the nature of consciousness and the mind

Robert G. Burton, 1993-08-10 This book describes and explores six current approaches to the study of mind the neuroscientific the behavioral the competence approach the ecological the phenomenological and the computational No other book in cognitive science covers such a broad range of research programs and topics in such a balanced fashion The first chapter is a mini history and philosophy of psychology which reviews some of the scientific developments and philosophical arguments behind these six different approaches Each subsequent chapter presents work that is on the frontiers of research in its field      **Internal Perception** Sara Dellantonio, Luigi Pastore, 2017-09-19 This book investigates how bodily information contributes to categorization processes for at least some conceptual classes and thus to the individual mastery of meanings for at least some word classes The bodily information considered is mainly that provided by the so called proprioceptive and interoceptive systems introduced by Sherrington The authors reconsider this in a new Gibsonian fashion calling it more generally proprioception which indicates the complex of all the bodily signals we are aware of and the qualitative experiences these give rise to The book shows that proprioceptive information understood in this sense is essential for explaining among others how we develop broad categories such as animate vs inanimate concepts denoting bodily experiences such as hunger or pain as well as emotions and abstract concepts such as friendship and freedom and in accounting for how we master the meanings of the corresponding words in our language      Cognitive Science José Luis Bermúdez, 2010-08-05 Cognitive science is at last treated as a unified subject in this exciting textbook Students are introduced to the techniques and main theoretical models of the cognitive scientist s toolkit and shown how this vibrant science is applied to unlock the mysteries of the human mind      Mental Representation and Consciousness E. Marbach, 2013-03-14 conditions of the possibility of Experience must mean nothing else than all that which lies immanently in the essence of Experience and therefore belongs to it indispensably The essence of Experience that phenomenological analysis of Experience elucidates is the same as the possibility of Experience and all that which is determined in the essence in the possibility of Experience is eo ipso 1 condition of the possibility of Experience Through acquaintance with Husserl s work then I developed my way of understanding what according to their very possibility lies in conscious activities of mentally representing something for example by imagining or remembering it or by viewing it in a picture all these understood as forms of modified perception As Husserl himself made clear such reflective and descriptive analyses of the mental activities according to their very possibility are carried out regardless of the way they have actually come to be However I was also interested in developmental questions especially with regard to the activity of imagining Hence I turned to cognitive developmental psychology in order to get acquainted with the necessary empirical material Moreover I
