Max Wade, 1998 Rehabilitation of Rivers Principles and Implementation Edited by Louise C de Waal Division of Environmental and Analytical Sciences University of Wolverhampton UK Andrew R G Large Department of Geography University of Newcastle UK and P Max Wade Department of Environmental Sciences University of Hertfordshire UK River rehabilitation has become an issue at the top of the agenda for water authorities and river managers in many countries throughout the world This challenging topic involves a wide range of themes many of which are brought together in this volume They concern planning strategy implementation and project appraisal for a number of different types of river systems including upland lowland and urban rivers Topic areas addressed include hydrology geomorphology ecology and economics as to be successful rehabilitation of freshwaters must incorporate all of these subjects within a holistic framework This volume covers a wide range of countries provides comprehensive and integrated coverage of factors concerning river rehabilitation and encompasses policy planning and implementation As such the text will have a lasting reference value and practical application Rehabilitation of Rivers combines prescriptive analytical and reviewing contributions covering a wide range of case studies from Britain continental Europe the USA Australia and Japan It also examines strategic issues such as catchment planning and integrated application of ecology and engineering in river rehabilitation This book will be an important text for all water authorities and river managers as well as hydrologists geomorphologists ecologists and nature conservationists

Restoration of Puget Sound Rivers David R. Montgomery, Susan Bolton, Derek B. Booth, Leslie Wall, 2015-12-31 The recent listing of Pacific salmon under the Endangered Species Act has led to substantial interest in the scientific basis for river restoration in the Pacific Northwest Millions of dollars in state and federal funding have been programmed for habitat restoration efforts to stem the decline of salmon populations in the region This volume addresses the need for a solid understanding of fluvial processes and aquatic ecology in order to predict both river and salmonid response to restoration projects In the Pacific Northwest as in most regions of the United States we are still learning about the processes that create habitat and river structure how those processes influence aquatic ecosystems and how to gauge the response of river systems to both land use changes and restoration efforts River systems are still responding to historic changes and degraded habitat may not be restored successfully if natural conditions are not well understood particularly if massive changes in watershed hydrology or other processes are the root cause These issues faced in the development of regional river restoration programs are by no means unique to the Northwest and so the initiation of a regional program of river restoration provides an opportunity to evaluate the state of river restoration in general The eighteen chapters of Restoration of Puget Sound Rivers presented by the region's experts at a symposium of the Society for Ecological Restoration examine geological and geomorphological controls on river and stream characteristics and dynamics biological aspects of river systems in the region and the application of fluvial

Contaminated Rivers Jerry R. Miller, Suzanne M. Orbock Miller, 2007-05-06 This book provides an introductory understanding of fluvial geomorphic principles and how these principles can be integrated with geochemical data to cost effectively characterize assess and remediate contaminated rivers The book stresses the importance of needing to understand both geomorphic and geochemical processes Thus the overall presentation is first an analysis of physical and chemical processes and second a discussion of how an understanding of these processes can be applied to specific aspects of site assessment and remediation Such analyses provide the basis for a realistic prediction of the kinds of environmental responses that might be expected for example during future changes in climate or land use

Encyclopedia of Geomorphology Andrew Goudie, 2013-04-15 Geomorphology the discipline which analyzes the history and nature of the earth s surface deals with the landforms produced by erosion weathering deposition transport and tectonic processes In recent decades there have been major developments in the discipline and these are reflected in this major Encyclopedia the first such reference work in the field to be published for thirty five years Encyclopedia of Geomorphology has been produced in association with the International Association of Geomorphologists IAG and has a truly global perspective The entries have been written by an international editorial team of contributors drawn from over thirty countries who are all among the leading experts in the discipline In two lavishly illustrated volumes Encyclopedia contains nearly 700 alphabetically organized entries to provide a comprehensive guide both to specific landforms and to the major types of geomorphological processes that create them The Encyclopedia also demonstrates the major developments that have taken place in recent years in our knowledge of tectonic and climatic changes and in the use of new techniques such as modelling remote sensing and process measurement Older concepts however are not forgotten and provide an historical perspective on the

Likens, 2010-03-29 A derivative of the Encyclopedia of Inland Waters *River Ecosystem Ecology* reviews the function of rivers and streams as ecosystems as well as the varied activities and interactions that occur among their abiotic and biotic components Because the articles are drawn from an encyclopedia the articles are easily accessible to interested members of the public such as conservationists and environmental decision makers Includes an up to date summary of global aquatic ecosystems and issues Covers current environmental problems and management solutions Features full color figures and tables to support the text and aid in understanding **Restoring Floodplains in Europe** Timothy Moss, Jochen Monstadt, 2008-02-15 This book addresses the complex institutional dimensions to restoring floodplains Despite the recent surge of interest in restoring floodplains among policy and research circles as well as in the public domain very few schemes for restoring functional floodplains have been put into practice in Europe to date The book explores the reasons behind this discrepancy between interest and applications with an original comparative analysis of the institutional drivers and constraints of floodplain restoration in Europe It explains why so few projects have been successfully implemented how recent policy shifts are creating new opportunities for floodplain restoration and what lessons for policy

development and project management can be drawn from in depth analysis of past and present schemes At a time of rapidly growing interest in restoring floodplains as an important component of efforts to improve flood protection enhance riparian habitats strengthen catchment management raise water quality and pursue integrated rural development the book critically appraises the relationship between macro level policy development and enforcement and micro level project design and implementation The book begins with two chapters setting out the case for floodplain restoration and assessing the relevant drivers and constraints of EU policy The next three chapters analyse the policy contexts of floodplain restoration in France Germany and Britain addressing the principal drivers and constraints in the fields of water management flood protection nature conservation spatial planning and agriculture This is followed by six case studies of schemes to restore floodplains divided between early schemes of the mid 1990s Rheinvorland Sud on the Upper Rhine Bourret on the Garonne and the Long Eau project in England and ongoing schemes of today Lenzen on the Elbe La Basse on the Seine and the Parrett Catchment Project The book concludes by drawing lessons from the principal findings and providing recommendations for ways of developing policy and designing projects for restoring floodplains in the future

Ecological Restoration of Aquatic and Semi-Aquatic Ecosystems in the Netherlands (NW Europe) P.H. Nienhuis, Ramesh D. Gulati, 2013-03-14 This work presents the state of the art of aquatic and semi aquatic ecological restoration projects in The Netherlands Starting from the conceptual basis of restoration ecology the successes and failures of hundreds of restoration projects are described Numerous successful projects are mentioned In general ecological restoration endeavours greatly benefit from the progressive experience achieved in the course of the years Failures mainly occur through insufficient application of physical chemical or ecological principles Spontaneous colonization by plants and animals following habitat reconstruction is preferred However sometimes the re introduction of keystone species e g eelgrass salmon beaver is necessary in case the potential habitats are isolated or fragmented or if a seed bank is lacking thus not allowing viable populations to develop Re introducing traditional management techniques e g mowing without fertilization low intensity grazing is important to rehabilitate the semi natural and cultural landscapes that are so characteristic for The Netherlands
