**The Size Cue to Visually Perceived Distance** Walter Charles Gogel, 1964 *Geographies of Globalization* Andrew Herod, 2009-02-02 Exploring a wide range of issues from the integration of the world economy to how contemporary processes are shaping and shaped by nation states and how workers are organizing transnationally in response to transformations in the planet's economic geography *Geographies of Globalization* is a critical examination of what has become the leitmotif of our contemporary world Challenges neoliberal assumptions on the nature of globalization Provides a conceptual overview of how globalization is a spatial process and of its relation to capitalism Explores whether we are in fact living in a more globalized world or only in a more internationalized one Considers arguments concerning whether globalization is a new phenomenon or simply the latest manifestation of processes many hundreds of years in the making Focuses on how nation states have shaped and been shaped by contemporary processes of globalization how globalization has been imagined discursively and how workers are responding to such processes Explores how workers are creating new organizing strategies in response to globalization The Extragalactic Distance Scale Space Telescope Science Institute (U.S.). Symposium, 1997-06-28 One of the hottest debates in astronomy and cosmology today concerns the value of the Hubble constant This constant is of paramount importance since it fixes the size and age of the Universe At a symposium at the Space Telescope Science Institute experts from around the world presented the latest results from a plethora of techniques for determining the Hubble constant The value has always been controversial but at this meeting experts results agreed for the first time to within about 20% Based on the meeting this book presents twenty three specially written review articles They provide a comprehensive account of the Hubble constant debate with the latest results from gravitational lensing supernovae and novae the Tully Fisher relation the Sunyaev Zeldovich effect globular clusters planetary nebulae light echoes and the Hubble Space Telescope Key Project This timely volume provides a standard reference for graduate students and researchers in astronomy and cosmology

perceive the sizes and shapes of objects as they move or rotate in depth is followed by a chapter on the ways in which depth cues interact The next chapter reviews sources of information such as changing disparity image looming and vergence eye movements used in the perception of objects moving in depth Various pathologies of depth perception including visual neglect stereoanomalies and albanism are reviewed Visual depth perception mechanisms through the animal kingdom are described starting with insects and progressing through crustaceans fish amphibians reptiles birds and mammals The chapter includes a discussion of how stereoscopic vision may have evolved The next chapter describes how visual depth perception is used to guide reaching movements of the hand avoiding obstacles and walking to a distant object The next three chapters review non visual mechanisms of depth perception Auditory mechanisms include auditory localization echolocation in bats and marine mammals and the lateral line system of fish Some fish emit electric discharges and then use electric sense organs to detect distortions of the electric field produced by nearby objects Some beetles and snakes use heat sensitive sense organs to detect sources of heat The volume ends with a discussion of mechanisms used by animals to navigate to a distant site Ants find their way back to the nest by using landmarks and by integrating their walking movements Several animals navigate by the stars or by polarized sunlight It seems that animals in several phyla navigate by detecting the Earth's magnetic field

**The Construction of Cognitive Maps** Juval Portugali, 2007-08-23 and processes which are exclusive to humans in their encoding storing decoding and retrieving spatial knowledge for various tasks The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations As is well known Gibson's 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view perception and thus cognition is direct immediate and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment The chapter by Harry Heft introduces J J Gibson's ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular According to Heft main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin's theory of evolution Gibson in his ecological approach has tried to do exactly this The author introduces the basic terminology of the ecological approach and relates its various notions in particular optic flow nested hierarchy and affordances to navigation and the way routes and places in the environment are learned

Neural Machines: A Defense of Non-Representationalism in Cognitive Neuroscience Matej Kohár, 2023-03-09 In this book Matej Kohar demonstrates how the new mechanistic account of explanation can be used to support a non-representationalist view of explanations in cognitive neuroscience and therefore can bring new conceptual tools to the non-representationalist arsenal Kohar focuses on the explanatory relevance of representational content in constitutive mechanistic explanations typical in cognitive neuroscience The work significantly contributes to two areas of literature 1 the

debate between representationalism and non representationalism and 2 the literature on mechanistic explanation Kohar begins with an introduction to the mechanistic theory of explanation focusing on the analysis of mechanistic constitution as the basis of explanatory relevance in constitutive mechanistic explanation He argues that any viable analysis of representational contents implies that content is not constitutively relevant to cognitive phenomena The author also addresses objections against his argument and concludes with an examination of the consequences of his account for both traditional cognitive neuroscience and non representationalist alternatives This book is of interest to readers in philosophy of mind cognitive science and neuroscience

*The Oxford Handbook of Vowel Harmony* Nancy A. Ritter, Harry van der Hulst, 2024-09-17 This handbook provides a detailed account of the phenomenon of vowel harmony a pattern according to which all vowels within a word must agree for some phonological property or properties Vowel harmony has been central in the development of phonological theories thanks to its cluster of remarkable properties notably its typically unbounded character and its non locality and because it forms part of the phonology of most world languages The five parts of this volume cover all aspects of vowel harmony from a range of theoretical and methodological perspectives Part I outlines the types of vowel harmony and some unusual cases before Part II explores structural issues such as vowel inventories the interaction of vowel harmony and morphological structure and locality The chapters in Part III provide an overview of the various theoretical accounts of the phenomenon as well as bringing in insights from language acquisition and psycholinguistics while Part IV focuses on the historical life cycle of vowel harmony looking at topics such as phonetic factors and the effect of language contact The final part contains 31 chapters that present data and analysis of vowel harmony across all major language families as well as several isolates constituting the broadest coverage of the phenomenon to date
