Charles Frederick Cross, 1906 *Researches on Cellulose* Cross Cross, 2018-03-06 Excerpt from Researches on Cellulose II 1900 1905 During the period 1900 05 there have appeared some valuable contributions to the science of the subject the more important of which we have reviewed in this work We have ventured to add some critical notes which we hope will rank as a criticism of appreciation the intention being to point the particular contributions to the issues contained in the central question on which the authors themselves are for the most part silent About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Researches on Cellulose Charles F. Cross, Cross Bevan, Edward John Bevan, 1906 **Researches on Cellulose** Cross, 2015-06-17 Excerpt from Researches on Cellulose II 1900 1905 Chemists of previous generations have paid relatively little attention to the amorphous or colloidal state of matter and the appearance of uncrystallisable products of reaction in investigations of carbon compounds usually evoked the epithet of Schmiere applied rather as an epitaph This procedure was perhaps the expression of a constitutional preference for bodies

of certain typical physical characteristics but actually we think it implied the recognition partly reasoned partly instinctive that in the colloidal state we lose touch of the organic relationships which obtain in the great groups of carbon compounds defined and represented by constitutional formulae If cellulose had been thus met with as an amorphous product of reaction that is in its alternative structureless forms it might very well have been included in the heterogeneous class of Schmier compounds it certainly would not have attracted the attention of investigators to the degree of devotion of which it has been the object It might be held that the attractiveness of cellulose as a subject of investigation lies in considerations of utility and that only its disproportionate technical importance could have supplied the motive for researches which lack the clear direction and control of the leading antecedent generalisations of the science About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
