Reshaping The Built Environment Ecology Ethics And Economics:

Reshaping the Built Environment Charles J. Kibert, 1999 Because of the profound effects of the built environment on the availability of natural resources for future generations those involved with designing creating operating renovating and demolishing human structures have a vital role to play in working to put society on a path toward sustainability This volume presents the thinking of leading academics and professionals in planning civil engineering economics ecology architecture landscape architecture construction and related fields who are seeking to discover ways of creating a more sustainable built environment Contributors address the broad range of issues involved offering both insights and practical examples In the book Stephen Kellert describes the scope of the looming ecological crisis Herman Daly explains the unsustainability of the world's economic system and the dangers inherent in the current movement toward globalization John Todd describes the evolution of wastewater processing systems inspired by natural systems John Tillman Lyle discusses the importance of landscape in the creation of the human environment Randall Arendt argues for a fundamental shift in land development patterns that would not only provide for more green space in new developments but would also increase the profitability of developers and the quality of life for new home owners Thomas E Graedel proposes the application of lessons learned from the emerging science of industrial ecology to the creation of green building While the transition to sustainability will not be easy natural systems provide abundant models of architecture engineering production and waste conversion that can be used in rethinking the human habitat and its interconnections This volume provides insights that can light the way to a new era in which a reshaped built environment will not only provide improved human living conditions but will also protect and respect the earth's essential natural life support systems and resources The Built Environment Wendy R. McClure, Tom J.

Bartuska, 2011-09-09 This book takes a sweeping view of the ways we build things beginning at the scale of products and interiors to that of regions and global systems In doing so it answers questions on how we effect and are affected by our environment and explores how components of what we make from products buildings and cities are interrelated and why designers and planners must consider these connections Reshaping the Built Environment Charles J. Kibert, 1999-05 This volume presents the thinking of leading academics and professionals in planning civil engineering economics architecture construction and a host of other fields who are seeking to discover ways of creating a more sustainable built environment

Construction Ecology Charles J. Kibert, Jan Sendzimir, G. Bradley Guy, 2003-08-27 Industrial ecology provides a sound means of systematising the various ideas which come under the banner of sustainable construction and provides a model for the design operation and ultimate disposal of buildings **Doing Environmental Ethics (Large Print 16pt)** Robert Traer, 2010-08 Doing Environmental Ethics offers a way to face our ecological crisis that draws on environmental science economic theory international law and religious teachings as well as philosophical arguments It engages students in constructing ethical presumptions based on our duty to other persons and species and also to ecosystems our character

Building the Ecological City R R White, 2002-02-22 If the modern city is a monument to anything it is a monument to man's inefficiency. Our cities are plagued by problems of congestion, waste, and pollution that deplete natural resources, damage the environment, and reduce the quality of life of citizens. The irony is as this fascinating new study shows that it doesn't have to be like this. Building the ecological city describes the problems we face and puts forward solutions to the question: how can we build cities that provide an acceptable standard of living for their inhabitants without depleting the ecosystems and biogeochemical cycles on which they depend? The book suggests and examines the concept of urban metabolism in which the city is characterized as a set of interlinked systems of physical flows linking air, land, and water. A series of chapters looks at the production and management of waste, energy use and air emissions, water supply and management, urban land use, and air quality issues. Within the broader context of climate change, the book then considers a range of practical strategies for restoring the health of urban ecosystems, from the restoration of brownfield land to productive use through to improving air quality and making better use of water resources. Building the ecological city is a major contribution to better urban management and planning for both citizens and the environment and is an invaluable sourcebook for urban and national planners, architects, and environmental agencies. Authoritative review of the environmental impact of modern cities. Seeks to identify a viable model for urban living in relation to all the resources—land, air, and water—upon which cities depend but currently tend to deplete or destroy. Essential reading for urban planners, architects, local and national government officers, environmental agencies worldwide, and students of ecology and environmental sciences. **The Economics of Everglades**

Restoration Richard Weisskoff, 2005-01-01 The book provides valuable contributions on three related fronts. It places past and current debates on ecosystem restoration of the Everglades in a clear systems context that acknowledges feedback between ecosystem quality and economic growth. Shows for the case of the Everglades that good intentions of providing generous financial support for restoration may lead to undesired effects that actually run counter to the original goal and demonstrates the use of regional modeling tools to develop consistent baseline forecasts and alternative scenarios. Matthias Ruth, University of Maryland, College Park, US. The restoration of the Florida Everglades, the largest ecosystem restoration project in the world, is now underway. Missing from the original plan, however, is a study of the region's cities and farms and the economic impact their growth will make on this already endangered ecosystem. This book provides that analysis.

Sustainable Construction Charles J. Kibert, 2016-03-29 The leading green building reference, updated with the latest advances in the field. Sustainable Construction is the leading reference for the design, construction, and operation of high-performance green buildings. With broad coverage including architecture, engineering, and construction, this book nevertheless delivers detailed information on all aspects of the green building process, from materials selection to building systems and more. This new fourth edition has been updated to reflect the latest codes and standards, including LEED v4, and includes new coverage of carbon accounting. The discussion has been updated to align with the current thinking on

economics climate change net zero buildings and more with contributions by leaders in the field that illustrate the most recent shifts in thinking and practice Ancillary materials including an instructor s manual and PowerPoint presentations for each chapter help bring this clear and up to date information into the classroom making this book a valuable reference for working construction professionals Also Interactive graphics found throughout the course help activate the content and highlight key concepts for students Sustainable construction has gone mainstream and will one day be the industry norm This book provides a comprehensive reference to all aspects of a project to show you how green building concepts and principles apply throughout the design and construction process Get up to date on the latest green building codes and standards Learn about the newest technology in green building materials Adopt the best practices in procurement and delivery systems Apply sustainability concepts to all aspects of construction and design Green buildings operate at a very high level of efficiency which is made possible only by careful consideration every step of the way Appropriate land use landscaping construction materials siting water use and more all play a role in a structure s ultimate carbon footprint Sustainable Construction provides clear guidance for all aspects of green building including the most recent advances and the latest technology

Greening Governance Ellen van Bueren, 2009 After twenty years of sustainable building policies the issue of environmental impact of buildings and urban environments remains Policy makers still have difficulties addressing the ambiguous contested and dynamic goals encapsulated in the term sustainable development How to decide between using zinc or PVC gutters when knowledge and valuation of environmental risks of both keep changing How can we accommodate urban growth now that compact cities turn out to be urban heat islands Greening governance identifies how policy makers can deal with these contested questions The book draws on policy network theories that consider stakeholder interaction negotiation and learning as conditions for policy success By understanding these conditions from an evolutionary viewpoint it provides a new perspective for governance The concepts of generative variety selective retention and regeneration will help policy makers to prioritize and select contested alternatives while also focusing on more long term and ambitious policy goals The book is of interest to policy makers and scientists concerned with both the practical and theoretical issues of sustainable built environments Book Jacket

Mazhar Hussain,2017-03-02 Comparative aesthetics is the branch of philosophy which compares the aesthetic concepts and practices of different cultures The way in which cultures conceive of the aesthetic dimension of life in general and art in particular is revelatory of profound attitudes and beliefs which themselves make up an important part of the culture in question This anthology of essays by internationally recognised scholars in this field brings into one volume some of the most important research in comparative aesthetics from classic early essays to previously unpublished contemporary pieces Ranging across cultures and time periods as diverse as ancient Greece India and China and the modern West and Japan the essays reveal both similarities and deep differences between the aesthetic traditions concerned In the course of these expositions and comparisons there emerges the general conclusion that no culture can be fully grasped if its aesthetic ideas are not understood

Nature-First Cities Cam Brewer,Herb Hammond,Sean Markey,2024-09-03 Nature belongs in cities but how do we put nature first without pushing people aside Nature First Cities reveals the false dichotomy of that question by recognizing that people and nature are indivisible Western urbanization has meant the ongoing expulsion of nature which is engendering biodiversity loss and inequality thwarting economic potential and affecting health This volume instead applies the science and practice of nature directed stewardship to cities Tested through case studies this methodology for urban ecosystem restoration is uniquely effective at revitalizing our strained cities Nature is woven into networks distributed equitably across neighbourhoods and partnered with the urban density that is essential for addressing the climate crisis Nature First Cities offers a practical framework for urban planning that reinforces our place in nature both physically by ensuring that cities are replete with biodiversity and intact ecosystems and conceptually by rebalancing our relationships with the planet and with one another

Post-Growth Planning Federico Savini,António Ferreira,Kim von Schönfeld,2022-05-18 This book draws on a wide range of conceptual and empirical materials to identify and examine planning and policy approaches that move beyond the imperative of perpetual economic growth It sketches out a path towards planning theories and practices that can break the cyclical process of urban expansion crises and recovery that negatively affect ecosystems and human lives To reduce the dramatic social and environmental impact of urbanization this book offers both a critique of growth led urban development and a prefiguration of ecologically regenerative and socially just ways of organizing cities and regions It uncovers emerging possibilities for post growth planning in the fields of collective housing mobility urban commoning ecological land use urban rural symbiosis and alternative planning worldviews It provides a toolkit of concepts and real life examples for urban scholars urbanists activists architects and designers seeking to make cities prosper within planetary boundaries This book speaks to both experts and beginners in post growth thinking It concludes with a manifesto and glossary of key terms for urban scholars students and practitioners

Greening the Industrial Facility Thomas Graedel,Jennifer Howard-Grenville,2006-04-09 This textbook and reference fills a critical gap in

literature on the comprehensive environmental impacts of industrial organizations Nineteen chapters examine individual industrial sectors inherent potential to pollute The text goes on to analyze new technologies and practices for transforming environmentally degrading effects of industry and shows how managers can navigate these changes and move their organizations towards long term environmental sustainability
