Wiles, 1996 Describes the common complications associated with trauma and critical care and specific information about their management Organized in readily accessible sections with thorough reference citations and pertinent illustrations Major sections include systemic complications head neck and neurotrauma complications cardiovascular and thoracic injury complications abdomen and alimentary tract complications complications of orthopaedic trauma the burn victim and the pregnant and pediatric trauma victims Chest Trauma W. Glinz, 2012-12-06 Expanded knowledge about the pathophysiologic effects of severe injuries advancements in the intensive care of victims of multiple injuries and the treatment made possible by modern cardiovascular surgery make it appear sensible to combine the assessment and therapy of thoracic injuries into a synthesis of various branches of medicine This monograph therefore is intended not only for the specialist in thoracic or cardiac surgery but also primarily for the person who is the first to be confronted by thoracic injuries namely the general surgeon or the traumatologist It reflects my own personal experience as chief surgeon of an emergency surgery ward of a university hospital and as head of an intensive care unit for the severely wounded which treats well over 100 patients with severe thoracic injuries annually and is based on an analysis of these cases My experience as a military surgeon in Vietnam was also taken into consideration Many wounds in the area of the thorax can be successfully treated with simple conservative procedures though by conservative I do not mean to imply inactive An aggressive conservatism is needed which must pay attention to small details In given cases however it requires the quick decision making capability of the competent surgeon For this reason considerable space is devoted to questions of evaluation and practical procedures **Color Atlas of Emergency Trauma** Demetrios Demetriades, Edward Newton, 2011-10-06 The new edition of this full color atlas presents nearly 900 images from one of the largest and busiest trauma centers in North America The images bring the reader to the bedside of patients with the full spectrum of common and uncommon traumatic injuries including motor vehicle accidents falls lacerations burns impalements stabbings and gunshot wounds The clinical operative and autopsy photographs x ray ultrasound magnetic resonance imaging and

Radiologic Diagnosis of Chest Disease Miriam Sperber,2012-12-06 Prior to the virtual atomic explosion of medical knowledge at a time when communication was very much slower a medical book to be authoritative and believable had to be written by a very knowledgeable and per force usually quite senior person The choice of texts was limited and tended to be dominated by a few classic a phrase not quite synonymous with dogma Following the information explosion the scenario is quite different Not only is there a geometric progression in the quantity and speed of development of new medical knowledge but also this development is occurring at very different rates in different countries This is particularly true in medical imaging The result is that it is now virtually impossible to produce a single author book that can cover the field or even a subdivision of it This absolute requirement for multiple authors has in turn created the need for a new type of editor author who must be multinational in approach have a uniquely informed appreciation of what is going on in medical imaging research throughout the entire world and possess the depth of personal knowledge and experience to judge correctly what work is the most rigorous and likely to have the greatest impact
