**Fairness and Competence in Citizen Participation** Ortwin Renn, Thomas Wehler, Peter Wiedemann, 2013-12-01 Ortwin Renn Thomas Wehler Peter Wiedemann In late July of 1992 the small and remote mountain resort of Morschach in the Swiss Alps became a lively place of discussion debate and discourse Over a three day period twenty two analysts and practitioners of public participation from the United States and Europe came together to address

one of the most pressing issues in contemporary environmental politics How can environmental policies be designed in a way that achieves both effective protection of nature and an adequate representation of public values In other words how can we make the environmental decision process competent and fair All the invited scholars from academia international research institutes and governmental agencies agreed on one fundamental principle For environmental policies to be effective and legitimate we need to involve the people who are or will be affected by the outcomes of these policies There is no technocratic solution to this problem Without public involvement environmental policies are doomed to fail The workshop was preceded by a joint effort by the three editors to develop a framework for evaluating different models of public participation in the environmental policy arena During a preliminary review of the literature we made four major observations These came to serve as the primary motivation for this book First the last decade has witnessed only a fair amount of interest within the sociological or political science communities in issues of public participation **The**

Michael Gerrard, Sheila R. Foster, 2008 Environmental justice is the concept that minority and low income individuals communities and populations should not be disproportionately exposed to environmental hazards and that they should share fully in making the decisions that affect their environment This volume examines the sources of environmental justice law and how evolving regulations and court decisions impact projects around the country Controlling Technocracy Gregory E. McAvoy, 1999-11-01 Disputes over hazardous waste sites usually are resolved by giving greater weight to expert opinion over public not in my back yard reactions Challenging the assumption that policy experts are better able to discern the general welfare Gregory E McAvoy here proposes that citizen opinion and democratic dissent occupy a vital constructive place in environmental policymaking McAvoy explores the issues of citizen rationality the tension between democracy and technocracy and the link between public opinion and policy in the case of an unsuccessful attempt to site a hazardous waste facility in Minnesota He shows how the site was defeated by citizens who had reasonable doubts over the need for the facility Offering a comprehensive look at the policymaking process McAvoy examines the motivations of public officials the resources they have for shaping opinion the influence of interest groups and the evolution of waste reduction programs in Minnesota and other states Integrating archival material interviews and quantitative survey data he argues that NIMBY movements can bring miscalculations to light and provide an essential check on policy experts often partisan views This book will be of value to those who work or study in the fields of hazardous waste policy facility siting environmental policy public policy public administration and political science *Environmental Policy Analysis and Practice* Michael R Greenberg, 2008-03-13 Pressing environmental challenges are frequently surrounded with stakeholders on all sides of the issues Opinions expressed by government agencies the private sector special interests nonprofit communities and the media among others can quickly cloud the dialogue leaving one to wonder how policy decisions actually come about In *Environmental Policy Analysis and Practice* Michael R Greenberg cuts through the complicated layers of bureaucracy science and the public interest to show how all policy considerations can be broken down according to six specific factors 1 the reaction of elected government officials 2 the reactions of the public and special interests 3 knowledge developed by scientists and engineers 4 economics 5 ethical imperatives and 6 time pressure to make a decision The book is organized into two parts with the first part defining and illustrating each one of these criteria Greenberg draws on examples such as nuclear power pesticides brownfield redevelopment gasoline additives and environmental cancer but focuses on how these subjects can be analyzed rather than exclusively on the issues themselves Part two goes on to describe a set of over twenty tools that are used widely in policy analysis including risk assessment environmental impact analysis public opinion surveys cost benefit analysis and others These tools are described and then illustrated with examples from part one Weaving together an impressive combination of practical advice and engaging first person accounts from government officials administrators and leaders in the fields of public health and medicine this clearly written volume is poised to become a leading text in environmental policy **The**

**Impact of Public Policy on Environmental Quality and Health** Amer El-Ahraf, Ron Dowd, Mohammad

Qayoumi, 1999-06-30 Until now an approach to land use management planning that not only addresses economic issues but also environmental concerns and health issues of land use has been lacking. These issues are vital for public policy makers, decision makers throughout the private sector as well as all businesses and industries that share space with the communities they serve and draw from. This volume covers the legal and regulatory aspects of land use management, the process of land use planning and all of the related environmental health and societal impacts that land use planning entails. This book provides a clear multidisciplinary approach to a very complex set of issues. An essential resource not only for public administrators, policymakers and planners but for people with corresponding responsibilities in business and industry, their attorneys and other advisors and for their colleagues with similar concerns. Because of their inestimable importance, land use decisions require thorough study and evaluation before project implementation, but what makes this a challenge is the uncommon breadth of knowledge and familiarity with a wide range of disciplines that decision makers must process and yet few have the necessary background and training. El Ahraf, Qayoumi and Dowd have thus had to attack their topic from a variety of viewpoints and disciplines such as urban planning, environmental science, energy use, public health as well as from the viewpoints of people whose concerns are primarily socioeconomic and legal. They take these disparate and often conflicting viewpoints and integrate them, giving readers a systematic way to acquire a holistic appreciation of the topic. Although the book focuses primarily on land use in the United States, it borrows relevant examples from international data. It is therefore useful not only as a text for college courses in the area of public health and urban planning but as a reference for professionals in many different fields with related concerns.

*Impact Assessment and Sustainable Resource Management* L. Graham Smith, 2014-09-11 Firmly places impact assessment in the broader context of environmental planning, developing a much needed integrative approach. The topics covered include decision making and dispute resolution, the role of environmental law, public policy, administration and participation, the nature of planning, impact assessment methodology, the application of impact assessment to frontier developments, linear facilities and waste management. **Site Unseen**

Gerald Jacob, 2010-11-23 Gerald Jacob views the history of public policy regarding nuclear waste, culminating in the 1982 Nuclear Waste Policy Act and its aftermath. The 1982 Act promised a solution but Jacob believes it deferred to the interests of the nuclear utilities and the U.S. Department of Energy. He describes how the nuclear establishment used science and geography to protect its interests and dominate nuclear waste policy making. He examines the federal promotion of nuclear power and asserts that federal policies, strong armed public opposition and locked the country into a single but flawed waste disposal solution.

**Environmental Justice Through Research-Based Decision-Making** William M. Bowen, 2002-05-03 This book discusses whether and to what extent there are widespread injustices and inequities caused by the distribution of environmental hazards in America today.

**The View From the Center of the Universe** Joel R. Primack, Nancy Ellen
