Resource Recovery And Recycling:

Resource Recovery and Recycling from Metallurgical Wastes S.R. Ramachandra Rao, 2011-08-29 Resource recovery and recycling from millions of tons of wastes produced from industrial activities is a continuing challenge for environmental engineers and researchers Demand for conservation of resources reduction in the quantity of waste and sustainable development with environmental control has been growing in every part of the world Resource Recovery and Recycling from Metallurgical Wastes brings together the currently used techniques of waste processing and recycling their applications with practical examples and economic potentials of the processes Emphasis is on resource recovery by appropriate treatment and techniques Material on the subject is scattered in waste management and environmental related journals conference volumes and government departmental technical reports This work serves as a source book of information and as an educational technical reference for practicing scientists and engineers as well as for students Describes the currently used and potential techniques for the recovery of valuable resources from mineral and metallurgical wastes Discusses the applications to specific kinds of wastes with examples from current practices as well as the economics of the processes Presents recent and emerging technologies of potentials in metal recycling and by product utilization *Resource Recovery and Recycling* Allan F. M. Barton, 1979 Factors influencing recycling feasibility Physical methods of separation and recovery Chemical separation and conversion processes Microbiology recycling Postconsumer waste Industrial and agricultural recycling processes Thermodynamics of recycling Resource Recovery and Recycling Allan F. Barton,

Materials and energy from municipal waste : resource recovery and recycling from municipal solid waste and beverage container deposit legislation. , *Resource Recovery and Recycling* Lower Mainland Refuse Project. Resource Recovery and Recycling Committee, Lower Mainland Refuse Project. Technical Committee, 1984 **Recycling and Resource Recovery Engineering** Richard I. Stessel, 2012-12-06 Solid waste is one of the newest fields to achieve recognition as a sub discipline in environmental engineering As such one is hard pressed to find thorough coverage of related topics in academic curricula Many graduate programs in environmental engineering have one introductory course in waste control A handful of texts some excellent exist to serve this need Recent purported crises in solid waste management have forced the understanding that something beyond the traditional control methods may be appropriate Resource recovery is the correct nomenclature for the longest standing alternative approach seeking to extract materials from the waste stream for eventual re use in one or another beneficial fashion Several books have evolved covering various approaches Design approaches therein have borrowed heavily from other disciplines ceasing where solid waste differs from the feeds to be processed These books were oriented towards knowledgeable practitioners This work attempts to present waste processing as a study in unit operations appropriate to university study at the graduate level The study of unit operations is typical in environmental engineering These unit operations are different A variety of student backgrounds are suitable However a familiarity with the basics of

waste control such as would be gained from one of the introductory courses mentioned above is assumed as is a sound quantitative background It is hoped that this work fills an empty niche
