Health Technology Assessment Policy and Methods Review: Frequently Asked Questions

What is HTA?

Health Technology Assessment (HTA) involves a range of processes to assess the quality, safety, efficacy, effectiveness, and cost effectiveness of health technologies. These processes are used to support Government decisions about health technologies.

Why do we do HTAs?

The purpose of HTA is to provide policymakers, funders, health professionals and health consumers with the necessary information to understand the benefits and risks of health technologies and procedures and how different health technologies compare with one another. This information is then used to inform policy, funding and clinical decisions, and assist with consumer decision-making.

What decisions are HTAs used for?

Market authorisation

Market authorisation is the approval (and listing on the Australian Register of Therapeutic Goods – ARTG) that health technology companies need to sell and supply goods, such as medicines and medical devices, in Australia.

Government subsidy

HTA is used to inform decisions about what health technologies should be subsidised or reimbursed under Australia's health subsidy and funding schemes. HTA is also used to determine under what circumstances a health technology should be subsidised and at what cost to the tax payer.

Who undertakes HTAs?

In Australia, several advisory and regulatory bodies use or undertake HTAs when they prepare advice to government.

Market authorisation

The Therapeutic Goods Administration (TGA; part of the Department of Health and Aged Care) is responsible for market authorisations. It evaluates, assesses and monitors all therapeutic goods.

HTA for Australian Government subsidy.

Two principal health technology advisory committees assess health technologies for Australian Government subsidy:

- Medical Services Advisory Committee (MSAC)
- Pharmaceutical Benefits Advisory Committee (PBAC)

What is the difference between HTA for market authorisation and HTA for government subsidy?

HTA for market authorisation helps decision makers consider whether a health technology should be allowed to be sold or supplied in Australia.

It provides information that helps decision makers understand whether health technologies:

- are safe
- perform as intended
- meet appropriate standards for use in Australia.

HTA for government subsidy helps decision makers consider whether a health technology should be subsidised. It provides information that helps decision makers understand how effective and safe a health technology would be compared
