active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems
