Wong,Thomas Shanley,2012-12-06 Acute lung injury ALI impacts patient care in every ICU in the world Our collective understanding of this condition has grown immensely over the past decade but morbidity and mortality remain unacceptably high To enhance the understanding of clinicians and researchers this book addresses the pathophysiology of acute lung injury from a molecular and cellular standpoint includes animal models of acute lung injury and points to potential therapeutic advances based on scientific findings It is a concise compendium of the multiple pathways mechanisms and molecules involved in the pathophysiology of acute lung injury and is intended to help caregivers understand the process and thus care for patients more effectively Molecular Insights Into Development In Humans: Studies In Normal Development And Birth Defects Moyra Smith,2014-11-20 The aim and scope of this book is to review current information on human development and processes of differentiation that have benefited from breakthrough analyses in stem cell biology elucidation

of genome and gene architecture and aspects of regulation of gene expression analysis of signaling systems and transcription factor actions Insights into actions of specific genes and their roles in development have been gathered through studies in patients with specific birth defects including congenital malformations metabolic defects and functional impairments The book is organized into three sections the first dealing with aspects of genomics gene structure and regulation analysis of signaling and function of specific organelles The second section deals with molecular aspects of development of specific organs and structures such as bone face brain heart liver pancreas kidney The last section deals with specific malformations and tumors that provide insight into regulation of growth Environmental factors that impact growth and development are also covered Drugs and the Lung C. Diseases Shima Abdollahi, Syam Mohan, Yashwant V. Pathak, 2023-04-19 There has been a global rise in the incidence of chronic illnesses which may be partially attributed to the lengthening of the average human lifespan Functional foods and nutraceuticals have a potential role to play in the development and maintenance of health They can assist the body in its battle against inflammation and chronic illnesses Molecular Mechanisms of Action of Functional Foods and Nutraceuticals for Chronic Diseases addresses the effects and mechanism of functional foods in relation to chronic diseases such as obesity cardiovascular diseases diabetes cancer etc This volume like the first volume Applications of Functional Foods and Nutraceuticals for Chronic Diseases inspires new thought processes and a paradigm shift in research and development Key Features Discusses the molecular mechanism of action the range of toxicities exerted by these food components for functional foods for addressing chronic conditions Enhances scientists and industrial personnel knowledge of functional foods and in the management of chronic diseases Presents research on the role of functional foods nutraceuticals in preventing and treating chronic diseases through epigenetic modulation Explores various subjects such as epigenetics immunological metabolic technological and neurodegenerative aspects affected by functional foods in chronic diseases The world's leading wellness centers for chronic diseases are using functional foods and nutraceuticals in their practice and discovering their useful applications and this second of two volume set is another great reference for practitioners scientists and clinicians in the management of chronic diseases Contributors hail from different geographical locations around the world and have many years of research and scholarly experience in functional foods nutraceuticals and biology *Characteristic clinical immune*

phenotypes and molecular mechanisms associated with inflammatory diseases, 2nd edition Chengjin Gao, Shuming Pan, Kun Xiong, 2024-11-06 The systemic inflammatory response is evident in inflammatory diseases and the immune system secretes many cytokines involved resulting in a robust immune response For example the pathogenesis of sepsis includes abnormal immune cell activation in the early stages as well as sepsis related immunosuppression During the immunosuppressive phase CD4 T cells CD8 T cells Th17 cells and d T cells are reduced while regulatory T cells increase At the same time T lymphocytes and neutrophils as immune effector cells interact with each other and play a key role in regulating the immune response to immune inflammatory diseases The increased release of neutrophil extracellular trap networks NETs by neutrophils leads to a significant upregulation of NETs DNA MPO which further aggravates the septic inflammatory response and organ functional impairment Therefore it is important to deeply investigate the characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases and targeting therapies against them may provide new ideas for the precise treatment of diseases The goal of this Research Topic is to provide a forum to advance research on the contribution of the fundamental mechanisms of immune system development and function with special emphasis on the description and mechanism of clinical immunological phenotypes in different immune disorders and the definition of their molecular basis The Research Topic had the bullet points including but not limited to the following 1 Description of the immune phenotypes of various common acute and chronic diseases 2 The regulatory mechanisms of different factors on the development and function of the host immune system 3 Inflammatory immunological mechanisms organ function and interorgan interactions
