Multifunctional Nanomaterials: Role and Perspectives in Combination Therapies Against Cancer Wang Zheng,Junjie Li,Jinbing Xie,2022-06-30 *Smart Stimuli-responsive Biomaterials for Programmed Drug Delivery, 2nd edition* Seyed Morteza Naghib,Ali Maleki,Yasser Zare , Kyong Rhee,2024-08-29 Most drugs are toxic to cells that often kill healthy cells and establish several side effects Conventional chemotherapy cargoes are not tumor specific and commonly their nature leads to significant toxic effects on healthy tissues Therefore several drug delivery systems DDSs were developed to amend the therapeutic properties of drugs and made them safer and more effective Local drug delivery which decreases systemic drug exposure is an important approach for maximal efficacy high levels of patient compliance and fewer

side effects Smart drug delivery systems SDDSs have gained much attention and paved the way for more effective treatment of patients SDDSs with stimuli responsive characteristics are determined as the process that the payloads are not released before reaching the target site This triggered release occurs due to the variations in the nano microcarrier chemistry and structure in response to endogenous and or exogenous stimulus establishing the release of the cargoes to the exact place Responsive and smart materials biomaterials are responsive sensitive to signals originating from physiological systems or to abnormalities originating from pathological defects that can interact with or be triggered by the biological environments and are interesting in drug delivery platforms devices for developing next generation accurate medicines In exogenous triggered delivery drug gene release is controlled by external stimulus which can be controlled exactly Different exogenous triggers have been reported such as light magnetic field temperature electrical field and ultrasound The endogenous triggers such as pH redox enzyme concentration and bio molecules are related to the disease s pathological characteristics Disease pathological characteristics are key parameters as physiological triggers for designing programmed delivery devices that may be used for the non invasive and effective treatment of a wide range of pathological conditions such as cancer infections diabetes cardiovascular diseases autoimmune disorders stroke and chronic wounds and degenerative diseases Endogenously triggered drug release is the same as exogenously triggered drug release which can lead to enhanced release of therapeutic molecules at the target place in its therapeutic concentration reducing local toxicity and side effects reducing the need for repeat administrations and increasing patient compliance Here we focused on smart endogenous and exogenous stimuli responsive biomaterials for programmed drug delivery The conventional drug delivery systems are not without any limitations and challenges One of the most important challenges is related to their degradability or insufficient biocompatibility of most materials which are used in smart delivery system Another challenge is related to the using of 2D in vitro models or in vivo animal studies to evaluate the performance of these systems and there is a poor relation between such results and human clinical trials Thus these incompatibilities can lead to the failing of the numerous smart systems in clinical studies In this special issue we focus on smart multi responsive drug delivery systems that can address some challenges and drawbacks Research paper commutation letter mini review and review are acceptable for publications in this special issue Main topics 1 Smart exogenous triggered delivery systems 2 Smart endogenous triggered delivery systems 3 Multi responsive targeted vehicles 4 Stimuli responsive niosomes and liposomes 5 Multifunctional biomaterials for cancer treatment 6 Smart 3D and 4D scaffolds for localized delivery systems

Williams, Michael Rathbone, 2021-06-24 Advanced Drug Delivery Systems in the Management of Cancer discusses recent developments in nanomedicine and nano based drug delivery systems used in the treatment of cancers affecting the blood lungs brain and kidneys The research presented in this book includes international collaborations in the area of novel drug delivery for the treatment of cancer Cancer therapy remains one of the greatest challenges in modern medicine as successful treatment requires the elimination of malignant cells that are closely related to normal cells within the body Advanced drug delivery systems are carriers for a wide range of pharmacotherapies used in many applications including cancer treatment The use of such carrier systems in cancer treatment is growing rapidly as they help overcome the limitations associated with conventional drug delivery systems Some of the conventional limitations that

these advanced drug delivery systems help overcome include nonspecific targeting systemic toxicity poor oral bioavailability reduced efficacy and low therapeutic index This book begins with a brief introduction to cancer biology This is followed by an overview of the current landscape in pharmacotherapy for the cancer management The need for advanced drug delivery systems in oncology and cancer treatment is established and the systems that can be used for several specific cancers are discussed Several chapters of the book are devoted to discussing the latest technologies and advances in nanotechnology These include practical solutions on how to design a more effective nanocarrier for the drugs used in cancer therapeutics Each chapter is written with the goal of informing readers about the latest advancements in drug delivery system technologies while reinforcing understanding through various detailed tables figures and illustrations Advanced Drug Delivery Systems in the Management of Cancer is a valuable resource for anyone working in the fields of cancer biology and drug delivery whether in academia research or industry The book will be especially useful for researchers in drug formulation and drug delivery as well as for biological and translational researchers working in the field of cancer Presents an overview of the recent perspectives and challenges within the management and diagnosis of cancer Provides insights into how advanced drug delivery systems can effectively be used in the management of a wide range of cancers Includes up to date information on diagnostic methods and treatment strategies using controlled drug delivery systems **Biological**
