Rest In Space:

Biological and Medical Research in Space David Moore, Peter Bie, Heinz Oser, 2012-12-06 Life Science studies in space were initially driven by the need to explore how man could survive spaceflight conditions the effects of being launched under high accelerations exposed to weightlessness and radiation for different periods of time and returned to Earth in safety In order to substantiate the detailed knowledge of potentially adverse effects many model experiments were launched using organisms which ranged from bacteria plants invertebrates rodents and primates through to man Although no immediate life threatening effects were found these experiments can be considered today as the precursors to life science research in space Many unexplained effects on these life forms were attributed to the condition of weightlessness Most of them were poorly recorded poorly published or left simply with anecdotal information Only with the advent of Skylab and later Spacelab did the idea emerge and indeed the infrastructure permit weightlessness to be considered as an extended tool for research into some fundamental mechanisms or processes associated with the effect of gravity on organisms at all levels The initial hypothesis to extrapolate from hypergravity through $1 \times g$ to near $0 \times g$ effects could no longer be retained since many of the experiment results were seen to contradict the models or theories in the current textbooks of biology and physiology The past decade has been dedicated primarily to exploratory research

Space and Time Hermann Minkowski, 2013-08-27 This is the first publication in German or English of Hermann Minkowski's three papers on relativity together The Relativity Principle lecture given at the meeting of the Göttingen Mathematical Society on November 5 1907 This is the first English translation The Fundamental Equations for Electromagnetic Processes in Moving Bodies lecture given at the meeting of the Göttingen Scientific Society on December 21 1907 New translation Space and Time lecture given at the 80th Meeting of Natural Scientists in Cologne on September 21 1908 New translation Space Physiology Jay C. Buckey, 2006 The success of any space flight mission depends not only on advanced technology but also on the health and well being of crew members This book written by an astronaut physician is the first practical guide to maintaining crew members health in space It combines research results with practical advice on such problems as bone loss kidney stones muscle wasting motion sickness loss of balance orthostatic intolerance weight loss and excessive radiation exposure Additional topics include pre flight preparation relevant gender differences long duration medical planning post flight rehabilitation and the physiology of extra vehicular activity Designed as a handbook for space crews this text is also an invaluable tool for all the engineers medical personnel and scientists who plan and execute space missions

Space Nutrition Scott M. Smith, Janis Davis-Street, Lisa Neasbitt, Sara R. Zwart, 2012-06-25 NASA's Nutritional Biochemistry Laboratory has a long and rich history of supporting education and outreach efforts To this end we have developed this book aimed at upper elementary intermediate students which highlights many aspects of space nutrition The book provides a brief history of human space flight and details the role of nutrition throughout from foods first eaten in space to the future of space exploration

Breakthroughs in Space Life

Science Research Günter Ruyters, Markus Braun, Katrin Maria Stang, 2021-06-10 This last volume of the SpringerBriefs in Space Life Sciences series is setup in 5 main parts The 1st part shortly summarizes the history of life science research in space from the late 40s until today with focus on Europe and Germany followed by a part on describing flight opportunities including the Space Shuttle Spacelab system and the International Space Station ISS in the 3rd part it focuses on extraordinary success stories of this constantly challenging research program and highlights some important key findings in space life science research The book introduces in the 4th part innovative developments in non invasive biomedical diagnostics and training methods for astronauts that emerge from this program and are of benefit for people on Earth especially in the aging society Last but not least in its 5th part it closes with an outlook on the future of space life sciences in the upcoming era of space exploration The book is intended for students and research scientists in the life sciences and biomedicine as well as for interested lay persons who wish to get an overview of space life science research its early days current status and future directions

Bioastronautics and the Exploration of Space Theodore C. Bedwell, Hubertus Strughold, 1965 The symposium is focused on manned space flight and is primarily concerned with the life and the performance capability of the astronauts The program of the conference is not confined to the life sciences alone but examines the space environment man machine complex and includes a discussion of technology astrophysics and astronomy earth based and space bound
