**Canadian Books in Print 2002** Marian Butler, 2002-02 The Rise and Fall of the Southern Alps Glen Coates, 2002 The Southern Alps Ka Tiritiri o te Moana are New Zealand s largest structural feature Running north and south for most of the length of the South Island they cross the Roaring Forties and divide the island into two distinct regions east and west each with its own unique climate landscape and lifeforms In this new book geologist Glen Coates joins with the artist and author Geoffrey Cox to tell how the Alps were

formed from ancient marine sediments how they were uplifted to become mountains and how they are being eroded down to produce the spectacular landscape seen today in the South Island Even in just the past few million years vast blocks of land have been shunted incredible distances and today frequent earthquakes remind us that this is a restless part of the earth where mountain building is still in full swing Rivers and glaciers past and present carve out a multitude of valleys and ranges and wide plains have spread out at the mountains feet All this is told in vivid non technical language and copiously illustrated with colour photographs and artwork The result is a book suitable for use in schools and by all who take an interest in their landscape and heritage      *Audio Video Review Digest* ,1989      *Plates* Roy A. Gallant,2003 Discusses plate tectonics the theory that the surface of the earth is always moving and the connection of this phenomenon to earthquakes and volcanoes
