Restoration Ecology And Sustainable Development:

Restoration Ecology and Sustainable Development Krystyna M. Urbanska, Nigel R. Webb, Peter J. Edwards, 1997-12-11

The problem of ecosystem damage is international a recent estimate suggests that 43% of the earth's terrestrial surface has a reduced capacity to supply benefits to humanity because of recent direct impacts of land use The discipline of restoration ecology aims to provide a scientifically sound basis for the reconstruction of degraded or destroyed ecosystems and to produce self supporting systems which are to some degree resilient to subsequent damage This book looks at the main issues with a broad perspective using case studies where appropriate and considering the economic and social context in which restoration is carried out It is essential to reverse current trends by developing and using our knowledge of how to restore ecosystems The book is therefore important for scientists professionals in ecological restoration landscape architects and environmental engineers and more generally for those involved in sustainable development

Ecological Restoration in International Environmental Law Anastasia Telesetsky, An Cliquet, Afshin Akhtar-Khavari, 2016-12-01 Human activities are depleting ecosystems at an unprecedented rate In spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed States and citizens need a new vision of how humans can reconnect with the natural environment With its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration While international environmental law IEL has developed significantly as a discipline over the past four decades this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it Arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law European Union law and national law perspective The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration

Restoring Natural Capital James Aronson, Suzanne J. Milton, James N. Blignaut, 2012-09-26

How can environmental degradation be stopped How can it be reversed And how can the damage already done be repaired The authors of this volume argue that a two pronged approach is needed reducing demand for ecosystem goods and services and better management of them coupled with an increase in supply through environmental restoration Restoring Natural Capital brings together economists and ecologists theoreticians practitioners policy makers and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and

socioecological systems It examines the business and practice of restoring natural capital and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it considers conceptual and theoretical issues from both an economic and ecological perspective examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets refining approaches to finding and implementing restoration projects and using restoration of natural capital as an economic opportunity Throughout contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people and when successfully executed represents a practical realistic and essential tool for achieving lasting sustainable development

Ecological Restoration Law Afshin Akhtar-Khavari, Benjamin J. Richardson, 2019-01-25 Ecological restoration is as essential as sustainable development for the health of the biosphere Restoration however has been a low priority of most countries environmental laws which tend to focus narrowly on rehabilitation of small discrete sites rather than the more ambitious recovery of entire ecosystems and landscapes Through critical theoretical perspectives and topical case studies this book's diverse contributors explore a more ambitious agenda for ecological restoration law Not only do they investigate current laws and other governance mechanisms they also consider the philosophical and methodological bases for the law to take ecological restoration more seriously Through exploration of themes relating to time space geography semiotics social justice and scientific knowledge this book offers innovative and critical insights into ecological restoration law

Restoration of Ecosystems - Bridging Nature and Humans Stefan Zerbe, 2023-02-13 In this interdisciplinary textbook which bridges the gap between the natural and social sciences both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented The diversity of land use types with a focus on Central Europe is highlighted and case studies of practical restoration projects are presented The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up to date but also critical overview of the state of knowledge This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes In further chapters marine ecosystems and their restoration as well as development potentials and the limits of restoration are discussed in more detail The ecological fundamentals are expanded through an interdisciplinary perspective taking into account environmental ethics sociology anthropology and economics In addition to an up to date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration the textbook provides a valuable basis for studies science and practice The students also receive assistance in searching for literature and critical fact analysis and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology

Restoration of Boreal and Temperate Forests John A.

Stanturf, 2004-12-28 While the commitment to protect and restore forest ecosystems has become a policy goal in many countries since the Rio Conference there is still no general consensus on what constitutes restoration This authoritative reference presents the best practices for fostering increased sustainability enhancing biodiversity and repairing ecosystem function

Ecosystem Restoration: Towards Sustainability and Resilient Development Anil Kumar Gupta, Manish Kumar Goyal, S. P. Singh, 2023-10-30 This edited book offers coverage towards SDG 15 in particular but it provides for all the SDGs in general The book is an inclusive comprehension on ecosystem restoration and sustainability including agricultural and ecosystem resilience the role of biodiversity climate change and water resources hydrological modelling extreme events disaster risk and management sustainable policy making on disaster management The world is facing diverse and severe challenges Millions of people are suffering from the catastrophic effects of extreme disasters climate emergencies water and food insecurity and the repercussions of COVID 19 pandemic Ecosystems are essential players in people's capacity to meet these challenges Hence managing them and protecting their resources in sustainable ways is crucial The book *Ecosystem Restoration Towards Sustainable and Resilient Development* provides comprehensive information on fundamentals approaches and latest developments in the field of ecosystem restoration resilience and sustainability This book is of interest to teachers researchers climate change scientists and valuable source of reference to the professionals and students in the relevant disciplines Besides the book serves as additional reading for graduate students of water ecology restoration forestry soil science and environmental sciences National and international ecological policy makers scientists and planners will also find this to be a useful read

Soil Ecology and Ecosystem Services Diana H. Wall, Richard D. Bardgett, Valerie Behan-Pelletier, Jeffrey E. Herrick, T. Hefin Jones, Johan Six, Donald R. Strong, Wim H. van der Putten, Karl Ritz, 2012-06-14 This multi contributor international volume synthesizes contributions from the world's leading soil scientists and ecologists describing cutting edge research that provides a basis for the maintenance of soil health and sustainability The book covers these advances from a unique perspective of examining the ecosystem services produced by soil biota across different scales from biotic interactions at micro-scales to communities functioning at regional and global scales The book leads the user towards an understanding of how the sustainability of soils biodiversity and ecosystem services can be maintained and how humans other animals and ecosystems are dependent on living soils and ecosystem services This is a valuable reference book for academic libraries and professional ecologists worldwide as a statement of progress in the broad field of soil ecology It will also be of interest to both upper level undergraduate and graduate students taking courses in soil ecology as well as academic researchers and professionals in the field requiring an authoritative balanced and up to date overview of this fast expanding topic

Contemporary Ecology Research in China Wenhua Li, 2015-10-26 The Chinese government is increasingly focusing on ecological construction and has subscribed to a national Ecological Civilization Construction Ecological research and protection practice develop so fast and achieve a lot at the national agenda This book is a synthesis

of five most exciting and dominant themes in contemporary ecological research in China biodiversity ecosystem management degraded ecosystem restoration global change and sustainable development This book spans all the Earth's major ecosystems such as forests oceans grasslands wetlands lakes rivers farmland and cities This book provides a platform for scientific research across a variety of disciplines It will be invaluable to experts policymakers and local officers and will also be a highly useful resource for undergraduate and postgraduate students This book will allow researchers students and policymakers outside China to learn about the significant achievements and applications of ecological research within China

Handbook of Ecological and Ecosystem Engineering Majeti Narasimha Vara Prasad, 2021-05-25 Learn from this integrated approach to the management and restoration of ecosystems edited by an international leader in the field The Handbook of Ecological and Ecosystem Engineering delivers a comprehensive overview of the latest research and practical developments in the rapidly evolving fields of ecological and ecosystem engineering Beginning with an introduction to the theory and practice of ecological engineering and ecosystem services the book addresses a wide variety of issues central to the restoration and remediation of ecological environments The book contains fulsome analyses of the restoration rehabilitation conservation sustainability reconstruction remediation and reclamation of ecosystems using ecological engineering techniques Case studies are used to highlight practical applications of the theory discussed within The material in the Handbook of Ecological and Ecosystem Engineering is particularly relevant at a time when the human population is dramatically rising and the exploitation of natural resources is putting increasing pressure on planetary ecosystems The book demonstrates how modern scientific ecology can contribute to the greening of the environment through the inclusion of concrete examples of successful applied management The book also includes A thorough discussion of ecological engineering and ecosystem services theory and practice An exploration of ecological and ecosystem engineering economic and environmental revitalization An examination of the role of soil meso and macrofauna indicators for restoration assessment success in a rehabilitated mine site A treatment of the mitigation of urban environmental issues by applying ecological and ecosystem engineering A discussion of soil fertility restoration theory and practice Perfect for academic researchers industry scientists and environmental engineers working in the fields of ecological engineering environmental science and biotechnology the Handbook of Ecological and Ecosystem Engineering also belongs on the bookshelves of environmental regulators and consultants policy makers and employees of non governmental organizations working on sustainable development

Reclamation of Mine-impacted Land for Ecosystem Recovery Nimisha Tripathi, Raj S. Singh, Colin D. Hills, 2016-02-04 Mining activities significantly impact the environment they generate huge quantities of spoil promote deforestation and the loss of agricultural production as well as releasing contaminants that result in the loss of valuable soil resources These negative impacts are now being recognized and this book shows how corrective action can be taken The introduction of sustainable mining requires mitigation strategies that start during the mine planning stage and extend to

after mineral extraction has ceased and post closure activities are being executed Reclamation of Mine impacted Land for Ecosystem Recovery covers methods of rejuvenation of mine wasteland including different practices of physical chemical and ecological engineering methods benefits of rejuvenation stabilization of land surfaces pollution control aesthetic improvement general amenity plant productivity and carbon sequestration as well as restoring biodiversity and ecosystem function best management practices and feasible solutions to the impacts of mining which will reduce the pollution load by reducing the discharge rate and the pollutant concentration reduce erosion and sedimentation problems and result in improved abandoned mine lands and ecosystem development The authors explain how mining impacts on soil properties and how soil carbon reserves soil fertility can be restored when mining has ceased Restoration involves a coordinated approach that recognizes the importance of key soil properties to enable re vegetation to take place rapidly and ecosystems to be established in a low cost and sustainable way This book s unique combination of the methods for reclamation technologies with policies and best practice worldwide will provide the background and the guidance needed by scientists researchers and engineers engaged in land reclamation as well as by industry managers
