Schar, 2011 Functionally diverse team members bring unique sets of cognitive styles to team interaction it is less clear how these differences affect the exchange of critical mutually required team information This cognitive diversity in new product design NPD teams increases the likelihood that individual team members will perceive the team's task differently leading to cognitive representational gaps between teammates interpretations of both the task and potential solution This research shows that cognitively diverse NPD teams develop

representational gaps based on individual cognitive preferences between convergent and divergent information types and these cognitive preferences influence both task definition and solution A second experiment shows that team leadership that bridges cognitive preferences called pivot thinking can overcome this limiting behavior Understanding these general mechanisms deepens understanding of group information processing and conflict in cognitively diverse NPD teams Implications for design education are discussed *Assimilating New Leaders* Diane Downey, 2001 **Cognitive Psychology and Its Implications** John R. Young, Graham Katz, Katz Graham, 2019-05-20 The aim of the European Cognitive Science Conference is the presentation of empirical theoretical and analytic work from all areas of interest in cognitive science such as artificial intelligence education linguistics neuroscience philosophy psychology and anthropology The focus is on interdisciplinary work that is either of interest for more than one of the research areas mentioned or integrates research methods from different fields With contributions by cognitive scientists from 20 different countries the papers in this volume reflect the origins of this conference as well as its international scope *Deep Learning* Stellan Ohlsson, 2011-01-31 Although the ability to retain process and project prior experience onto future situations is indispensable the human mind also possesses the ability to override experience and adapt to changing circumstances Cognitive scientist Stellan Ohlsson analyzes three types of deep non monotonic cognitive change creative insight adaptation of cognitive skills by learning from errors and conversion from one belief to another incompatible belief For each topic Ohlsson summarizes past research re formulates the relevant research questions and proposes information processing mechanisms that answer those questions The three theories are based on the principles of redistribution of activation specialization of practical knowledge and re subsumption of declarative information Ohlsson develops the implications of those mechanisms by scaling their effects with respect to time complexity and social interaction The book ends with a unified theory of non monotonic cognitive change that captures the abstract properties that the three types of change share *The Psychology of Expertise* Robert R. Hoffman, 2014-02-25 This volume investigates our ability to capture and then apply expertise In recent years expertise has come to be regarded as an increasingly valuable and surprisingly elusive resource Experts who were the sole active dispensers of certain kinds of knowledge in the days before AI have themselves become the objects of empirical inquiry in which their knowledge is elicited and studied by knowledge engineers experimental psychologists applied psychologists or other experts involved in the development of expert systems This book achieves a marriage between experimentalists applied scientists and theoreticians who deal with expertise It envisions the benefits to society of an advanced technology for capturing and disseminating the knowledge and skills of the best corporate managers the most seasoned pilots and the most renowned medical diagnosticians

This book should be of interest to psychologists as well as to knowledge engineers who are out in the trenches developing expert systems and anyone pondering the nature of expertise and the question of how it can be elicited and studied scientifically. The book's scope and the pivotal concepts that it elucidates and appraises as well as the extensive categorized bibliographies it includes make this volume a landmark in the field of expert systems and AI as well as the field of applied experimental psychology.

Group Creativity Paul B. Paulus, Bernard Arjan Nijstad, 2003. Group Creativity summarizes the developments in the research on the processes involved in group or team creativity and innovation. The volume draws from a broad range of perspectives such as cognition, groups, creativity, information systems, and organizational psychology.
