America COMPETES United States. Congress. Senate. Committee on Commerce, Science, and Transportation, 2015

High-Skilled Migration Mathias Czaika, 2018-02-08 Political and scientific debates on migration policies have mostly focused on governments efforts to control or reduce low skilled asylum and irregular migration or to encourage the return migration of these categories Less research and constructive discourse has been conducted on the role and effectiveness of policies to attract or retain high skilled workers An improved understanding of the drivers and dynamics of high skilled migration is essential for effective policy making as most highly developed and emerging economies experience growing shortages of high skilled labour supply in certain occupations and sectors and skilled immigration is often viewed as one way of addressing these Simplistic assumptions that high skilled migrants are primarily in pursuit of higher wages raise the expectation that policies which open channels for high skilled immigration are generally successful Although many countries have introduced policies aimed at attracting and facilitating the recruitment of high skilled workers not all recruitment efforts have had the desired effects and anecdotal evidence on the effectiveness of these programmes is rather mixed The reason is that the rather narrow focus on migration policy coincides with a lack of systematic and rigorous consideration of other economic social and political drivers of migration which may be equally or sometimes even more important than migration policies per se A better understanding of migration policies their making consequences and limitations requires a systematic knowledge of the broader economic social and political structures and their interaction in both origin and destination countries This book enhances this vibrant field of social scientific enquiry by providing a systematic multidisciplinary and global analysis of policies driving international high skilled migration processes in their interaction with other migration drivers at the individual city national and international level

Handbook of Research on Entrepreneurship Policy David B. Audretsch, Isabel Grilo, A. Roy

Thurik, 2007 This book is a well written and handy source for readers. Additionally, it provides an overview of current issues relevant to the development of entrepreneurial policy, which is based on interesting case studies across a number of nations. Dessy Irawati International Journal of Entrepreneurial Behaviour and Research. What is new in the world is the need to understand business dynamics: the entry, exit, and growth of firms in the economy. This dynamic firm structure, as opposed to the static firm structure that dominated past thinking, has spurred an outpouring of research. The heart of the issue is that while many have identified the importance of business dynamics, entry and exit, we have only recently taken a closer look at the ecological system in which some companies must die for others to thrive. Entrepreneurs are the predators of this system. Public policy in an entrepreneurial economy must limit the forces that prevent firm exit and foster the forces that promote firm entry. This book makes an important contribution to the debate. Zoltan J. Acs, George Mason University, US, and Max Planck Institute of Economics, Germany. This unique Handbook provides a solid foundation for essential study in the nascent field of entrepreneurship policy research. This foundation is initially developed via the exploration of two significant propositions underpinning the nature of entrepreneurship policy research. The first is that entrepreneurship has emerged as a bona fide focus of public policy, particularly with respect to economic growth and employment creation. The second is that neither scholars nor policy makers are presently equipped to understand the public policy role for entrepreneurship. The contributors, experienced scholars, specialist researchers, and dynamic policy makers, thus grapple with novel questions of considerable policy relevance that few have previously posed. The Handbook therefore provides some of the first crucial systematic analyses of important issues and key questions to be raised in order to move entrepreneurship policy forward. Also presented: Written by academics and practitioners, drawing examples from both North America and Europe, this stimulating new Handbook is a prerequisite for students, scholars, and practitioners in the incipient world of entrepreneurship policy.

Courting Science Damon V. Coletta, 2016-05-25 In *Courting Science* Damon Coletta offers a novel explanation for the decline of American leadership in world affairs Whether the American Century ends sooner rather than later may depend on America s capacity for self reflection and ultimately self restraint when it comes to science technology and engineering Democracy s affinity for advanced technology has to be balanced against scientific research and progress as a global enterprise In an era of rising challengers to America s lead in the international order and an increasingly globalized civil society a Scientific State has a better chance of extending its

dominance In order to draw closer to this ideal though the United States will have to reconsider its grand strategy It must have a strategy that scrutinizes how tightly it constrains how narrowly it directs and how far it trusts American scientists If given the opportunity scientists have the potential to lead a second American Century through domestic science and technology policy international diplomacy and transnational networks for global governance The Empowered University Freeman A. Hrabowski III, 2019-11-12 A practical and hopeful examination of how colleges and universities can create the best possible experience for students and faculty There are few higher education leaders today that command more national respect and admiration than Freeman A Hrabowski III the outspoken president of the University of Maryland Baltimore County Named one of America s Best Leaders by US News World Report and one of Time s 100 Most Influential People in the World Hrabowski has led a community transformation of UMBC from a young regional institution to one of the nation s most innovative research universities In The Empowered University Hrabowski and coauthors Philip J Rous and Peter H Henderson probe the way senior leaders administrators staff faculty and students facilitate academic success by cultivating an empowering institutional culture and broad leadership for innovation They examine how shared leadership enables an empowered campus to tackle tough issues by taking a hard look in the mirror noting strengths and weaknesses while assessing opportunities and challenges The authors dig deeply into these tough issues in higher education ranging from course redesign to group based and experiential learning entrepreneurship and civic engagement academic inclusion and faculty diversity The authors champion a holistic approach to student success focusing on teaching and learning while offering an array of financial social and academic supports for students of all backgrounds Throughout the book the authors emphasize the important role of analytics in decision making They also explore how community members and senior leaders can work together to create an inclusive campus through a more welcoming and supportive racial climate improved Title IX processes and career support for faculty of all backgrounds Ultimately The Empowered University is as much a case study of the authors work as it is an examination of institutional change inclusive excellence and campus community partnerships Arguing that higher education can play a unique role in addressing the fundamental divisions in our society and economy by supporting individuals in reaching their full potential the authors have developed a provocative guide for higher education leaders who want to promote healthy and productive campus communities **Education Roads Less Traveled** Mitch Pearlstein, 2019-02-15 Every year large numbers of American young people who are not terribly interested in attending a four year college reluctantly enroll anyway effectively pressured by combinations of parents peers teachers guidance counselors and the normative air they breathe More than occasionally they wind up confirming that collegiate life is not for them and sooner or later drop out From there again more than occasionally they find themselves unemployed or underemployed in big time student debt and quite possibly feeling like a failure Cratered paths like these routinely stunt entries to middle class jobs and careers These are often needless delays and losses because other education and career routes are primed to better

serve millions of young men and women especially those who enjoy working with their hands Taking advantage of these routes also simultaneously enriches our economy Digging deeply into issues like these is the book's main aim Helping teenagers think through what they want to do with their lives occupationally is its main educational mission Recognizing the economic and other dangers posed by severe skill gaps made worse by the retirement of skilled baby boomers adds urgency to the mix

The Politics of Innovation Mark Zachary Taylor, 2016-05-04 Why are some countries better than others at science and technology S T Written in an approachable style The Politics of Innovation provides readers from all backgrounds and levels of expertise a comprehensive introduction to the debates over national S T competitiveness It synthesizes over fifty years of theory and research on national innovation rates bringing together the current political and economic wisdom and latest findings about how nations become S T leaders Many experts mistakenly believe that domestic institutions and policies determine national innovation rates However after decades of research there is still no agreement on precisely how this happens exactly which institutions matter and little aggregate evidence has been produced to support any particular explanation Yet despite these problems a core faith in a relationship between domestic institutions and national innovation rates remains widely held and little challenged The Politics of Innovation confronts head on this contradiction between theory evidence and the popularity of the institutions innovation hypothesis It presents extensive evidence to show that domestic institutions and policies do not determine innovation rates Instead it argues that social networks are as important as institutions in determining national innovation rates The Politics of Innovation also introduces a new theory of creative insecurity which explains how institutions policies and networks are all subservient to politics It argues that ultimately each country's balance of domestic rivalries vs external threats and the ensuing political fights are what drive S T competitiveness In making its case The Politics of Innovation draws upon statistical analysis and comparative case studies of the United States Japan South Korea China Taiwan Thailand the Philippines Argentina Brazil Mexico Canada Turkey Israel Russia and a dozen countries across Western Europe
