Evaluation of Guidelines for Exposures to Technologically Enhanced Naturally Occurring Radioactive Materials National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Evaluation of EPA Guidelines for Exposure to Naturally Occurring Radioactive Materials, 1999-01-25 Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed Many human activities such as mining and milling of ores extraction of petroleum products use of groundwater for domestic purposes and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment Such alterations of the natural environment can increase sometimes substantially radiation exposures of the public Exposures of the public to naturally occurring radioactive materials NORM that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials TENORM by the US Environmental Protection Agency EPA and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials

Radiation Effects on Mammals Olga A. Smirnova, 2016-10-14 Dr Smirnova s updated text is devoted to the theoretical studies of radiation effects on mammals It summarizes 35 years of results the author obtained from analyzing dose rate equivalents for the Galactic Cosmic Rays GCR and for Solar Particles Events SPE This edition also includes two new chapters on skin epidermal epithelium and risk assessment for myeloid leukemia as well as extended revisions addressing the radiation effects on the blood forming system Mathematical models are used to explain the effects of both acute and chronic irradiation on the dynamics of vital body systems like the hematopoietic system the development of autoimmune diseases and the mortality dynamics in homogeneous and nonhomogeneous mammalian populations The proposed methodology of these studies the models themselves and the obtained results are of a great theoretical significance and can find wide practical use

Imaging Practice and Radiation Protection in Pediatric Radiology Michael Seidenbusch, Veronika Rösenberger, Karl Schneider, 2019-12-05 This book offers the reader sound advice on how to perform optimal conventional pediatric radiographs and how to obtain quick and easy organ dose estimates in order to improve the optimization process in pediatric imaging Clear guidelines are provided for minimization of the radiation exposure of children through optimization of the radiation exposure conditions and conversion coefficients are presented for calculation of the organ doses achieved in organs and tissues during conventional pediatric radiography taking into consideration both optimal and suboptimal radiation field settings Previously published conversion coefficients have failed to represent the variation in radiation field settings in daily clinical routine which has made it difficult for the pediatric radiologist to estimate the impact of the field settings on

absorbed doses in organs and tissues The aim of this book co written by a pediatric radiologist a physician and physicist and a medical radiation technologist is to address this issue by providing for the first time a thorough overview of clinical radiation field settings and their implications for radiation protection An accompanying volume is devoted to fluoroscopy

Trace Elements in Terrestrial Environments Domy C. Adriano, 2013-03-19 Knowledge is not to be sought for the pleasures of the mind or for contention or for superiority to others or for profit or fame or power or any of these inferior things but for the benefit and use of life Sir Francis Bacon Based on citations in the literature it is evident the first edition entitled *Trace Elements in the Terrestrial Environment* 1986 met its primary objective which was to provide students and professionals with a comprehensive book in many important aspects of trace elements in the environment Indeed the extent of its use has exceeded my expectations As a result of its usefulness and encouragement by colleagues in the field I was compelled to write this edition following a similar format but including new chapters on biogeochemistry bioavailability environmental pollution and regulation ecological and human health effects and risk and risk management and expanding the coverage to include freshwater systems and groundwater where appropriate In addition to plants which was the main biota of emphasis in the earlier edition fish and wildlife and invertebrates both terrestrial and aquatic are discussed as necessary The ecological and human health effects of major environmental contaminants such as As Cd Cr Pb and Hg are also highlighted along with relevant information on potential risks to the ecology and human health

Diagnostic Nuclear Medicine David I. Hamilton, 2013-11-11 In the development of many medical technologies the beginning is characterised by an emphasis on the basic scientific principles of the technology and the optimisation of the functional aspects of the technology As a technology matures there is a tendency for the underlying principles to be forgotten as the clinical applications begin to develop and the focus moves to an understanding of the clinical application This maturity brings with it new challenges for those involved in the use of the technology An acceptance of the methodology may lead to a scaling back of the basic training of staff into the fundamentals of the techniques and lead to a lack of questioning as to those issues which lead to the optimisation in clinical applications This lack of basic training may ultimately lead to a stifling of research and development of the technology as a whole as trained staff becomes a scarce commodity Nuclear medicine is no exception to this development cycle As a medical specialty the discipline has matured The basic imaging technology has become more reliable in everyday use requiring less input from scientific staff Clinical procedures have become protocols which are often followed without due understanding of the basic principles underlying the imaging procedure This is clearly demonstrated when new radiopharmaceuticals are introduced into the market place
