Comparative Law and Regulation Francesca Bignami, David Zaring, 2016-09-30 Governance by regulation rules propounded and enforced by bureaucracies is taking a growing share of the sum total of governance Once thought to be an American phenomenon it is now a central form of state action in every part of the world including Europe Latin America and Asia and it is at the core of much international lawmaking In Comparative Law and Regulation original contributions by leading scholars in the field focus both on the legal dimension of regulation and on how this dimension operates in those places that have turned to regulation to meet their obligations

**Risk Regulation in the Internal Market** Maria Weimer, 2019-03-13 This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by techno scientific complexity uncertainty and societal contestation It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental public health economic and social concerns in risk regulation Weimer analyses the drawbacks of the EU approach to agricultural biotechnology showing that its reductionism i e the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability has undermined both the legitimacy and effectiveness of EU regulation in this area Resistance to this approach however has also triggered legal innovations prompting us to re think EU internal market law including the way in which it manages the tensions between unity and diversity and between social and economic concerns This text offers fresh and original insights into how far the EU can go in harmonizing regulatory

approaches to risk At the same time it proposes new ways of re thinking EU risk regulation to make it more responsive to different perspectives on risk and technology A unique feature of this book is that it contributes to various strains of scholarship including risk regulation internal market law public administration and studies of governance and regulation as well as connecting these themes to broader debates about the legitimacy of European integration and new ways of differentiated integration As a result it assists in re imagining the EU internal market and its regulation as a site of diversity

**Risk Management and Governance** Terje Aven,Ortwin Renn,2010-09-27 Risk is a popular topic in many sciences in natural medical statistical engineering social economic and legal disciplines Yet no single discipline can grasp the full meaning of risk Investigating risk requires a multidisciplinary approach The authors coming from two very different disciplinary traditions meet this challenge by building bridges between the engineering the statistical and the social science perspectives The book provides a comprehensive accessible and concise guide to risk assessment management and governance A basic pillar for the book is the risk governance framework proposed by the International Risk Governance Council IRGC This framework offers a comprehensive means of integrating risk identification assessment management and communication The authors develop and explain new insights and add substance to the various elements of the framework The theoretical analysis is illustrated by several examples from different areas of applications

**An Inconvenient Deliberation** Miriam Haritz,2011-05-27 There is increasing evidence to suggest that adaptation to the inevitable is as relevant to climate change policymaking as mitigation efforts Both mitigation and adaptation as well as the unavoidable damage occurring both now and that is predicted to occur all involve costs at the expense of diverse climate change victims The allocation of responsibilities implicit in terms of the burden sharing mechanisms that currently exist in public and private governance demands recourse under liability law especially as it has become clear that most companies will only start reducing emissions if verifiable costs of the economic consequences of climate change including the likelihood of liability outweigh the costs of taking precautionary measures This vitally important book asks Can the precautionary principle make uncertainty judicable in the context of liability for the consequences of climate change and if so to what extent Drawing on the full range of pertinent existing literature and case law the author examines the precautionary principle both in terms of its content and application and in the context of liability law She analyses the indirect means offered by existing legislation being used by environmental groups and affected individuals before the courts to challenge both companies and regulators as responsible agents of climate change damage In the process of responding to its fundamental question the analysis explores such further questions as the following What is the role of the precautionary principle in resolving uncertainty in scientific risk assessment when faced with inconclusive evidence and how does it affect decision making particularly in the regulatory choices concerning climate change To this end what is the concrete content of the precautionary principle How does liability law generally handle scientific uncertainty What different types of liability exist and how are they equipped to

handle a climate change liability claim What type of liability is best suited for precautionary measures or a lack thereof Can the application of the precautionary principle make a difference to the outcomes of climate change liability claims In order to draw conclusions concerning the legal uncertainties posed by climate change the author draws examples from national legislations representative of the various legal systems as well as from existing treaties General rules and obligations relevant to climate change liability are examined and a selection of actual legal cases from around the world concerning climate change be it actual liability claims or litigation indirectly relevant to a claim is also presented As an overview of the different legal challenges created by climate change liability this book is without peer The practical meaning and impact of these findings for lawyers whether corporate or activist for regulators and policymakers and for decision makers in governmental bodies and private companies is immeasurable

Finkel, Christopher Carrigan, 2014-01-06 As millions of Americans struggle to find work in the wake of the Great Recession politicians from both parties look to regulation in search of an economic cure Some claim that burdensome regulations undermine private sector competitiveness and job growth while others argue that tough new regulations actually create jobs at the same time that they provide other benefits Does Regulation Kill Jobs reveals the complex reality of regulation that supports neither partisan view Leading legal scholars economists political scientists and policy analysts show that individual regulations can at times induce employment shifts across firms sectors and regions but regulation overall is neither a prime job killer nor a key job creator The challenge for policymakers is to look carefully at individual regulatory proposals to discern any job shifting they may cause and then to make regulatory decisions sensitive to anticipated employment effects Drawing on their analyses contributors recommend methods for obtaining better estimates of job impacts when evaluating regulatory costs and benefits They also assess possible ways of reforming regulatory institutions and processes to take better account of employment effects in policy decision making Does Regulation Kills Jobs tackles what has become a heated partisan issue with exactly the kind of careful analysis policymakers need in order to make better policy decisions providing insights that will benefit both politicians and citizens who seek economic growth as well as the protection of public health and safety financial security environmental sustainability and other civic goals Contributors Matthew D Adler Joseph E Aldy Christopher Carrigan Cary Coglianese E Donald Elliott Rolf F re Ann Ferris Adam M Finkel Wayne B Gray Shawna Grosskopf Michael A Livermore Brian F Mannix Jonathan S Masur Al McGartland Richard Morgenstern Carl A Pasurka Jr William A Pizer Eric A Posner Lisa A Robinson Jason A Schwartz Ronald J Shadbegian Stuart Shapiro      **Resolution of International Water Disputes** Permanent Court of
