Risk Management Strategy For Pcb Contaminated Sediments:

A Risk-Management Strategy for PCB-Contaminated Sediments National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Remediation of PCB-Contaminated Sediments, 2001-05-07 This book provides a risk based framework for developing and implementing strategies to manage PCB contaminated sediments at sites around the country The framework has seven stages beginning with problem definition continuing through assessment of risks and management options and ending with an evaluation of the success of the management strategy At the center of the framework is continuous and active involvement of all affected parties particularly communities in the development implementation and evaluation of the management strategy A Risk Management Strategy for PCB Contaminated Sediments emphasizes the need to consider all risks at a contaminated site not just human health and ecological effects but also the social cultural and economic impacts Given the controversy that has arisen at many PCB contaminated sites this book provides a consistent yet flexible approach for dealing with the many issues associated with assessing and managing the risks at Superfund and other contaminated sites *A Risk-management Strategy for PCB-contaminated Sediments*, 2001 Strategies to Address Contaminated Sediments United States. Congress. House. Committee on Transportation and Infrastructure. Subcommittee on Water Resources and Environment, 2001 *Sediment Risk Management and Communication* Susanne Heise, 2007-03-12 In dynamic river systems effective and sustainable risk management of sediments contaminants and their sources must be carried out on a river basin scale A diversity of interests and risk perceptions whether environmental economical or personal as well as the broad variety of uses and functions of river systems can lead to conflicts and disagreements about how and where river systems should be managed This requires a transparent methodology to assess environmental risks in the river basin followed by a prioritisation of those sites where measures would yield the highest positive effect for the river basin and where financial resources could be allocated most efficiently However risk perceptions may only partially be influenced by scientific assessments of risk and often also depend on a variety of factors such as personal experience and confidence in institutions Risk managers must develop methods to balance technical and socioeconomic issues with the aim to reduce risks posed by sediments to environmental and economic resources to a level that is perceived as tolerable by society *Sediment Risk Management and Communication Vol 3* in the SEDNET mini series is based on discussions that were held in the working group on Risk Management and Communication which was one of 4 working groups within the European Demand Driven Sediment Research Network SedNet It aims to analyse the current situation in Europe with regard to sediment risk management issues to draw conclusions from this analysis and to offer recommendations for sustainable risk management from basin to site specific scale This volume also available as part of a 4 volume set ISBN 0444519599 Discount price for set purchase A broad overview on sediment quality and impact assessment of pollutants Suitable for both newcomers to the field of sediment treatment and specialists alike

Sediment Dredging at Superfund Megasites National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Sediment Dredging at Superfund Megasites, 2007-10-30 Some of the nation's estuaries, lakes, and other water bodies contain contaminated sediments that can adversely affect fish and wildlife and may then find their way into people's diets. Dredging is one of the few options available for attempting to clean up contaminated sediments, but it can uncover and re-suspend buried contaminants, creating additional exposures for wildlife and people. At the request of Congress, EPA asked the National Research Council (NRC) to evaluate dredging as a cleanup technique. The book finds that, based on a review of available evidence, dredging's ability to decrease environmental and health risks is still an open question. Analysis of pre-dredging and post-dredging at about 20 sites found a wide range of outcomes in terms of surface sediment concentrations of contaminants: some sites showed increases, some no change, and some decreases in concentrations. Evaluating the potential long-term benefits of dredging will require that the U.S. Environmental Protection Agency step up monitoring activities before, during, and after individual cleanups to determine whether it is working there and what combinations of techniques are most effective.

Processes, Assessment and Remediation of Contaminated Sediments Danny D. Reible, 2013-07-20 The purpose of this book is to help engineers and scientists better understand contaminated sediment sites and identify and design remedial approaches that are more efficient and effective. Contaminated sediment management is a difficult and costly exercise that is rarely addressed with easily identified and implemented remedies. It is hoped that this book can help identify and implement management approaches that provide an optimal, if not entirely satisfactory, solution to sediment contaminant problems.

Managing Critical Infrastructure Risks Igor Linkov, Richard J. Wenning, Gregory A. Kiker, 2007-09-17 This book offers a state-of-the-science approach to current environmental security threats and infrastructure vulnerabilities. It emphasizes beliefs that the convergence of seemingly disparate viewpoints and often uncertain and limited information is possible only by using one or more available risk assessment methodologies and decision-making tools such as risk assessment and multi-criteria decision analysis (MCDA).

Acute Exposure Guideline Levels for Selected Airborne Chemicals National Research Council, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Acute Exposure Guideline Levels, 2010-04-18 This book is the eighth volume in the series *Acute Exposure Guideline Levels for Selected Airborne Chemicals* and reviews AEGLs for acrolein, carbon monoxide, 1,2-dichloroethene, ethylenimine, fluorine, hydrazine, peracetic acid, propylenimine, and sulfur dioxide for scientific accuracy, completeness, and consistency with the NRC guideline reports.

Phthalates and Cumulative Risk Assessment National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on the Health Risks of Phthalates, 2009-01-19 People are exposed to a variety of chemicals throughout their daily lives. To protect public health, regulators use risk assessments to examine the

effects of chemical exposures This book provides guidance for assessing the risk of phthalates chemicals found in many consumer products that have been shown to affect the development of the male reproductive system of laboratory animals Because people are exposed to multiple phthalates and other chemicals that affect male reproductive development a cumulative risk assessment should be conducted that evaluates the combined effects of exposure to all these chemicals The book suggests an approach for cumulative risk assessment that can serve as a model for evaluating the health risks of other types of chemicals

Estimating Mortality Risk Reduction and Economic Benefits from Controlling Ozone Air Pollution National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Estimating Mortality Risk Reduction Benefits from Decreasing Tropospheric Ozone Exposure, 2008-08-21 In light of recent evidence on the relationship of ozone to mortality and questions about its implications for benefit analysis the Environmental Protection Agency asked the National Research Council to establish a committee of experts to evaluate independently the contributions of recent epidemiologic studies to understanding the size of the ozone mortality effect in the context of benefit analysis The committee was also asked to assess methods for estimating how much a reduction in short term exposure to ozone would reduce premature deaths to assess methods for estimating associated increases in life expectancy and to assess methods for estimating the monetary value of the reduced risk of premature death and increased life expectancy in the context of health benefits analysis

Estimating Mortality Risk Reduction and Economic Benefits from Controlling Ozone Air Pollution details the committee's findings and posits several recommendations to address these issues

Applications of Toxicogenomic Technologies to Predictive Toxicology and Risk Assessment National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Applications of Toxicogenomic Technologies to Predictive Toxicology, 2007-12-19 The new field of toxicogenomics presents a potentially powerful set of tools to better understand the health effects of exposures to toxicants in the environment At the request of the National Institute of Environmental Health Sciences the National Research Council assembled a committee to identify the benefits of toxicogenomics the challenges to achieving them and potential approaches to overcoming such challenges The report concludes that realizing the potential of toxicogenomics to improve public health decisions will require a concerted effort to generate data make use of existing data and study data in new ways an effort requiring funding interagency coordination and data management strategies

Review of EPA's Integrated Risk Information System (IRIS) Process National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review the IRIS Process, 2014-06-25 The Integrated Risk Information System IRIS is a program within the US Environmental Protection Agency EPA that is responsible for developing toxicologic assessments of environmental contaminants An IRIS assessment contains hazard identifications and dose response assessments of various chemicals related to cancer and noncancer outcomes Although the program was created to increase consistency among toxicologic assessments within the

agency federal state and international agencies and other organizations have come to rely on IRIS assessments for setting regulatory standards establishing exposure guidelines and estimating risks to exposed populations Over the last decade the National Research Council NRC has been asked to review some of the more complex and challenging IRIS assessments including those of formaldehyde dioxin and tetrachloroethylene In 2011 an NRC committee released its review of the IRIS formaldehyde assessment Like other NRC committees that had reviewed IRIS assessments the formaldehyde committee identified deficiencies in the specific assessment and more broadly in some of EPA s general approaches and specific methods Although the committee focused on evaluating the IRIS formaldehyde assessment it provided suggestions for improving the IRIS process and a roadmap for its revision in case EPA decided to move forward with changes to the process Congress directed EPA to implement the report s recommendations and then asked the National Research Council to review the changes that EPA was making or proposing to make in response to the recommendations Review of EPA s Integrated Risk Information System IRIS Process provides an overview of some general issues associated with IRIS assessments This report then addresses evidence identification and evaluation for IRIS assessments and discusses evidence integration for hazard evaluation and methods for calculating reference values and unit risks The report makes recommendations and considerations for future directions Overall Review of EPA s Integrated Risk Information System Process finds that substantial improvements in the IRIS process have been made and it is clear that EPA has embraced and is acting on the recommendations in the NRC formaldehyde report The recommendations of this report should be seen as building on the progress that EPA has already made

Baptized in PCBs Ellen Griffith Spears,2014-04-07 In the mid 1990s residents of Anniston Alabama began a legal fight against the agrochemical company Monsanto over the dumping of PCBs in the city s historically African American and white working class west side Simultaneously Anniston environmentalists sought to safely eliminate chemical weaponry that had been secretly stockpiled near the city during the Cold War In this probing work Ellen Griffith Spears offers a compelling narrative of Anniston s battles for environmental justice exposing how systemic racial and class inequalities reinforced during the Jim Crow era played out in these intense contemporary social movements Spears focuses attention on key figures who shaped Anniston from Monsanto s founders to white and African American activists to the ordinary Anniston residents whose lives and health were deeply affected by the town s military industrial history and the legacy of racism Situating the personal struggles and triumphs of Anniston residents within a larger national story of regulatory regimes and legal strategies that have affected toxic towns across America Spears unflinchingly explores the causes and implications of environmental inequalities showing how civil rights movement activism undergirded Anniston s campaigns for redemption and justice

Igniting the Power of Community Paul A. Gaist,2009-12-04 Igniting the Power of Community The Role of CBOs and NGOs in Global Public Health introduces readers to the pursuit and potential of community based organizations and nongovernmental organizations to transform global public health At a time of

unprecedented challenges economic crises social inequalities environmental stressors emerging health threats these organizations are initiating and driving change often being the first to call attention to the issues and increasingly forging significant and sustainable solutions Through concrete examples success stories and cautionary tales from experienced practitioners Igniting the Power of Community demonstrates why understanding the roles of the diverse organizations of this sector is vital to anyone concerned with improving health and public health today This forward thinking book explains how citizen sector organizations work their immediate and long term impact on public health and the key players and business dynamics involved With an emphasis on innovative approaches it provides an insiders view into practical considerations regarding organizational structure financing and operations A sampling of the coverage The new era of social entrepreneurship and philanthropy Sustainability in international public health NGOs Front line perspectives from both well established and grassroots CBOs Faith based organizations and public health NGOs and the military evolving relationships in conflict and disaster zones Understanding the environmental health movement and its impact Project YEAH a youth AIDS organizations story Whether you are involved in clinical care health research public health programs or policy development and implementation this book provides key insights and skills and will serve as an invaluable resource in working most effectively with and within these dynamic organizations body

The Illusion of Certainty Erik Rifkin,Edward Bouwer,2007-09-14 This book provides an understanding and appreciation of the risk assessment process and the ability to objectively interpret health risk values Included is an explanation of the uncertainty inherent in the assessment of risks as well as an explanation of how the communication and characterization of risks can dramatically alter the perception of those risks Case studies illustrate the strengths and limitations of characterizing certain risks Using the accepted risk assessment paradigm proposed by the National Research Council these case studies illustrate which risk values have merit and why other assessments fail to meet basic criteria

Science and Decisions National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Improving Risk Analysis Approaches Used by the U.S. EPA,2009-03-24 Risk assessment has become a dominant public policy tool for making choices based on limited resources to protect public health and the environment It has been instrumental to the mission of the U S Environmental Protection Agency EPA as well as other federal agencies in evaluating public health concerns informing regulatory and technological decisions prioritizing research needs and funding and in developing approaches for cost benefit analysis However risk assessment is at a crossroads Despite advances in the field risk assessment faces a number of significant challenges including lengthy delays in making complex decisions lack of data leading to significant uncertainty in risk assessments and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment Science and Decisions makes practical scientific and technical recommendations to address these challenges This book is a complement to the widely used 1983 National Academies book Risk Assessment in the Federal Government also known as the Red Book

The earlier book established a framework for the concepts and conduct of risk assessment that has been adopted by numerous expert committees regulatory agencies and public health institutions The new book embeds these concepts within a broader framework for risk based decision making Together these are essential references for those working in the regulatory and public health fields

Evaluating Research Efficiency in the U.S. Environmental Protection Agency National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Evaluating the Efficiency of Research and Development Programs at the U.S. Environmental Protection Agency, 2008-07-17 A new book from the National Research Council recommends changes in how the federal government evaluates the efficiency of research at EPA and other agencies Assessing efficiency should be considered only one part of gauging a program's quality relevance and effectiveness The efficiency of research processes and that of investments should be evaluated using different approaches Investment efficiency should examine whether an agency's R D portfolio including the budget is relevant of high quality matches the agency's strategic plan These evaluations require panels of experts In contrast process efficiency should focus on inputs the people funds and facilities dedicated to research and outputs the services grants publications monitoring and new techniques produced by research as well as their timelines and should be evaluated using quantitative measures The committee recommends that the efficiency of EPA's research programs be evaluated according to the same standards used at other agencies To ensure this OMB should train and oversee its budget examiners so that the PART questionnaire is implemented consistently and equitably across agencies

Acute Exposure Guideline Levels for Selected Airborne Chemicals National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Acute Exposure Guideline Levels, 2016-10-26 Extremely hazardous substances can be released accidentally as a result of chemical spills industrial explosions fires or accidents involving railroad cars and trucks transporting EHSs Workers and residents in communities surrounding industrial facilities where these substances are manufactured used or stored and in communities along the nation's railways and highways are potentially at risk of being exposed to airborne EHSs during accidental releases or intentional releases by terrorists Pursuant to the Superfund Amendments and Reauthorization Act of 1986 the U S Environmental Protection Agency EPA has identified approximately 400 EHSs on the basis of acute lethality data in rodents Acute Exposure Guideline Levels for Selected Airborne Chemicals Volume 20 reviews and updates the technical support document on acute exposure guideline levels AEGLs for selected chloroformates This update focuses on establishing AEGL 3 values for n propyl chloroformate and isopropyl chloroformate but will also consider whether any new data are available that would affect the proposed values for the other 10 chloroformates AEGLs represent threshold exposure limits exposure levels below which adverse health effects are not likely to occur for the general public and are applicable to emergency exposures ranging from 10 minutes min to 8 h

Three levels AEGL 1 AEGL 2 and AEGL 3 are developed for each of five exposure periods 10 min 30 min 1 h 4 h and 8 h and are distinguished by varying degrees of severity of toxic effects This report will inform planning response and prevention in the community the workplace transportation the military and the remediation of Superfund sites *The Global Coastal Ocean* Allan R. Robinson, Kenneth H. Brink, 2005 In multidisciplinary efforts to understand and manage our planet contemporary ocean science plays an essential role Volumes 13 and 14 of *The Sea* focus on two of the most important components in the field of ocean science today the coastal ocean and its interactions with the deep sea and coupled physical biogeochemical and ecosystem dynamics
