Dam Safety Management / Gestion de la Sécurité des Barrages Cigb Icold, 2021-06-11 Dam Safety Management is a major concern during the entire lifetime cycle of a dam scheme This is particularly true for the operational phase of the scheme that represents by far the longest period in its lifetime cycle Bulletin 154 presented a general approach and concepts to be applied to dam operation The current Bulletin 175 extends the developed concepts to all phases preceding the operational phase Many risks associated with the operation of existing dams have their origins in other phases preceding the actual operation Although there are numerous ICOLD Bulletins addressing technical aspects of planning design construction and commissioning of dams there is not a single Bulletin which covers the subject in a comprehensive manner The current document is a first attempt to capture all relevant dam safety aspects in all preoperational phases by systematically characterizing the actors involved their roles the activities and complex interactions present in different phases of the dam lifecycle An Overarching Safety Management System is specifically developed that can be applied to all actors involved La gestion de la sécurité des barrages est une préoccupation majeure pendant tout le cycle de vie d'un projet de barrage Cela est particulièrement vrai pour la phase opérationnelle du système qui représente de loin la plus longue de son cycle de vie Le Bulletin 154 présente une approche générale et des concepts appliquer l'exploitation des barrages Le Bulletin 175 actualise les concepts développés toutes les phases précédant la phase d'exploitation De nombreux risques associés à l'exploitation des barrages existants ont leur origine dans d'autres

phases précédant l'exploitation proprement dite Bien qu'il existe de nombreux bulletins ICOLD traitant des aspects techniques de la planification de la conception de la construction et de la mise en service des barrages il n'existe pas un seul bulletin qui couvre le sujet de manière exhaustive Le document actuel est une première tentative de capturer tous les aspects pertinents de la sécurité des barrages dans toutes les phases appropriées en caractérisant systématiquement les acteurs impliqués leurs rôles les activités et les interactions complexes présentes dans les différentes phases du cycle de vie du barrage Un système global de gestion de la sécurité est spécifiquement développé et peut être appliqué tous les acteurs impliqués

Modelling Under Risk and Uncertainty Etienne de Rocquigny, 2012-04-30 Modelling has permeated virtually all areas of industrial environmental economic bio medical or civil engineering yet the use of models for decision making raises a number of issues to which this book is dedicated How uncertain is my model Is it truly valuable to support decision making What kind of decision can be truly supported and how can I handle residual uncertainty How much refined should the mathematical description be given the true data limitations Could the uncertainty be reduced through more data increased modeling investment or computational budget Should it be reduced now or later How robust is the analysis or the computational methods involved Should could those methods be more robust Does it make sense to handle uncertainty risk lack of knowledge variability or errors altogether How reasonable is the choice of probabilistic modeling for rare events How rare are the events to be considered How far does it make sense to handle extreme events and elaborate confidence figures Can I take advantage of expert phenomenological knowledge to tighten the probabilistic figures Are there connex domains that could provide models or inspiration for my problem Written by a leader at the crossroads of industry academia and engineering and based on decades of multi disciplinary field experience *Modelling Under Risk and Uncertainty* gives a self consistent introduction to the methods involved by any type of modeling development acknowledging the inevitable uncertainty and associated risks It goes beyond the black box view that some analysts modelers risk experts or statisticians develop on the underlying phenomenology of the environmental or industrial processes without valuing enough their physical properties and inner modelling potential nor challenging the practical plausibility of mathematical hypotheses conversely it is also to attract environmental or engineering modellers to better handle model confidence issues through finer statistical and risk analysis material taking advantage of advanced scientific computing to face new regulations departing

from deterministic design or support robust decision making Modelling Under Risk and Uncertainty Addresses a concern of growing interest for large industries environmentalists or analysts robust modeling for decision making in complex systems Gives new insights into the peculiar mathematical and computational challenges generated by recent industrial safety or environmental control analysis for rare events Implements decision theory choices differentiating or aggregating the dimensions of risk aleatory and epistemic uncertainty through a consistent multi disciplinary set of statistical estimation physical modelling robust computation and risk analysis Provides an original review of the advanced inverse probabilistic approaches for model identification calibration or data assimilation key to digest fast growing multi physical data acquisition Illustrated with one favourite pedagogical example crossing natural risk engineering and economics developed throughout the book to facilitate the reading and understanding Supports Master PhD level course as well as advanced tutorials for professional training Analysts and researchers in numerical modeling applied statistics scientific computing reliability advanced engineering natural risk or environmental science will benefit from this book

Role of Dams and Reservoirs in a Successful Energy Transition Robert Boes,Patrice Droz,Raphaël Leroy,2023-08-31 Today new and unexpected challenges arise for Europe s large array of existing dams and fresh perspectives on the development of new projects for supporting Europe s energy transition have emerged In this context the 12th ICOLD European Club Symposium has been held in September 2023 in Interlaken Switzerland The overarching Symposium theme was on the Role of dams and reservoirs in a successful energy transition The articles collected in this report book consisting of a 250 page abstract book and a 1010 page full paper USB cover the various themes developed during the symposium Dams and reservoirs for hydropower Dams and reservoirs for climate change adaptation Impact mitigation of dams and reservoirs How to deal with ageing dams In conjunction with the Symposium the 75th anniversary of the Swiss Committee on Dams offered an excellent opportunity to not only draw from the retrospective of Switzerland s extensive history of dam development but to also reveal perspectives on the new role of dams for a reliable and affordable energy transition These aspects are illustrated by several articles covering the various activities challenges and concerns of the dam community

Extreme Hydrological Events: New Concepts for Security O.F. Vasiliev,P.H.A.J.M.van Gelder,E.J. Plate,M.V. Bolgov,2007-06-17 This proceedings contains the papers which were presented at the NATO Advanced Research Workshop ARW on Extreme Hydrological Events New Concepts for Security which was held in Novosibirsk Russia from July 11 15 2005 The workshop fell within the NATO priority research topic on Environmental Security Disaster Forecast

and Prevention At the present time the necessity of considerable deepening of our understanding about the nature of extreme and catastrophic natural and man induced events in particular hydrologic ones becomes very topical as well as the development of advanced methods for their prediction including estimating probability of their occurrence and a risk related to them Another aspect of this hydrological problem is reducing of vulnerability of social economic and engineering systems to the extreme hydrologic events EHE and decreasing of a degree of their effect on such systems Dealing with these problems needs further refining existing tools for prediction and forecasting of EHE It can be done essentially through revealing mechanisms of their generation and with use of new approaches and methodologies in related branches of hydrology This ARW is targeted to contribute to the critical analysis and assessment of current knowledge on a number of the key issues of hydrology such as extreme hydrological phenomena problems of floods low flows and droughts In view of significant economic losses and actually wide geographical occurrence investigation of these hydrological phenomena is of great scientific and practical importance
