A new chapter is devoted to the growing importance of renewable energy sources, related subsidy schemes, and their impact on energy markets. Carbon emissions certificates, post-Fukushima market shifts, and improvements in renewable energy generation are all included. Further, due to the unprecedented growth in shale gas production in recent years, a significant amount of material on gas markets has been added in this edition. Managing Energy Risk is now a complete guide to both gas and electricity markets, and gas-specific models like gas storage and swing contracts are given their due. The unique practical approach to energy trading includes a comprehensive explanation of the interactions and relations between all energy commodities. Thoroughly revised to reflect recent changes, it covers the impacts of the financial crisis and market fluctuations in the wake of Fukushima. Emphasizes both electricity and gas, with all new gas valuation models and a thorough description of the gas market. Written by a team of authors with theoretical and practical expertise, blending mathematical finance and technical optimization. Covers developments in the European Union Emissions Trading Scheme as well as coal, oil, natural gas, and renewables. The latest developments in gas and power markets have demonstrated the growing importance of energy risk management for utility companies and energy-intensive industry.
