Guidotti, 2015-02-27 Health and sustainability have become ubiquitous topics in all realms of popular discourse What these discussions often overlook is the fact that the two concepts are interrelated and that their surrounding policies and practices can often inform and reinforce each other As sustainability measures are already in place across many levels of government there is now an opportunity to extend these principles to improve health care and health care policy Health and Sustainability An Introduction details how the values of sustainability can be applied to the design of health systems and the delivery of primary care By providing a practical framework for understanding complicated sustainability

problems related to health the book offers an authoritative resource for understanding health and environmental rights parallels between human toxicology and ecotoxicology how health promotion strategy can be a template for sustainability health science and how it can be used to support decisions in health and sustainability how scientific knowledge is achieved understood accepted and used in health and environmental advocacy and how this relates to sustainability Students and practitioners in health will benefit from this introduction to sustainability and those in sustainability and environmental studies will benefit from this application to human health Health and Sustainability offers a roadmap for successfully integrating these approaches for healthier people and environment      Energy and Culture Brendan Dooley, 2017-05-15 How will humanity continue to meet its energy needs without destroying the conditions necessary to sustain human life on earth The search for an answer to this question depends as much on the past as on the present and as much on the physical sciences as on the social sciences This book offers a truly trans disciplinary and trans cultural look at the problem of energy production and consumption in modern times Discussing issues of history politics science risk lifestyle and representation contributors demonstrate that experiences through time can provide insights into the kinds of solutions that have succeeded as well as reasons why other solutions have failed They also show what different countries and cultures might learn from each other emphasizing how discoveries in one discipline have inspired new approaches in another discipline Among many other important conclusions the book suggests that energy transitions do not occur simply because of the exhaustion of old energy sources and any solutions to the incipient energy crisis of the 21st century will depend on people s perceptions of science environment and risk informed and shaped in turn by the media      Nanotechnology and Global Sustainability Donald Maclurcan, Natalia Radywyl, 2018-09-03 The rise of collaborative consumption peer to peer systems and not for profit social enterprise heralds the emergence of a new era of human collectivity Increasingly this consolidation stems from an understanding that big banner issues such as climate change are not the root causes of our present global predicament There is a growing and collective view that issues such as this are actually symptoms of a much more vicious seemingly insurmountable condition our addiction to economic consumption and population growth in a world of finite resources Nanotechnology and Global Sustainability uses nanotechnology the product of applied scientific knowledge to control and utilize matter at atomic and molecular scales as a lens through which to explore the interrelationship between innovation politics economy and sustainability This groundbreaking book addresses how stakeholders can actively reshape agendas to create positive and sustainable futures through this latest controversial cross sectoral technology It moves beyond issues of efficiency productivity and utility exploring the insights of 22 contributors from around the world whose work spans the disciplines of science and the humanities Their combined knowledge reinforced with various case studies introduces an exciting prospect how we can innovate without economic growth This new volume in the Perspectives in Nanotechnology series is edited by Dr Donald Maclurcan and Dr Natalia Radywyl Dr Maclurcan is a social innovator and Honorary Research
