The Non-passerine Pleistocene Avifauna of the Talara Tar Seeps, Northwestern Peru Kenneth E. Campbell, 1979

Non-passerine Pleistocene Avifauna of the Talara Tar Seeps, Northwestern Peru , **Speciation and Biogeography of Birds** Ian Newton, 2003-02-25 This book should be of value to anyone interested in bird evolution and taxonomy biogeography distributional history dispersal and migration patterns It provides an up to date synthesis of current knowledge on species formation and the factors influencing current distribution patterns It draws heavily on new information on Earth history including past glacial and other climatic changes on new developments in molecular biology and palaeontology and on recent studies of bird distribution and migration patterns to produce a coherent account of the factors that have influenced bird species diversity and distribution patterns worldwide Received the Best Bird Book of the Year award for 2004 from British Birds magazine Winner of the British Birds British Trust for Ornithology Bird Book of the Year 2004 The first book to deal comprehensively with bird speciation and biogeography Up to date synthesis of new information Clearly written No previous book covers the same ground Many maps and diagrams Makes difficult and widely scattered information accessible and easily understood A sound base for future research Takes full account of recent developments in molecular biology Nightjars, Potoos, Frogmouths, Oilbird, and Owlet-nightjars of the World Nigel Cleere, 2021-08-10 This is the ultimate identification guide to the nightjars potoos frogmouths Oilbird and owlet nightjars of the world Covering all 135 known species of these elusive and cryptically plumaged birds this illustrated guide features more than 580 superb color photographs depicting every species and many subspecies including numerous images never before published Photos of museum specimens are provided for birds for which no images in the wild exist including species not seen since their original discovery Detailed species accounts describe key identification features confusion species vocalizations distribution habitat and altitudinal range breeding season and sites egg type and clutch size downy chick status and Red List category This easy to use photographic guide also includes a color distribution map for every species as well as sections on plumage taxonomy and more The ultimate identification guide to these elusive birds Covers all 135 known species Features more than 580 color photos Provides detailed species accounts and a color distribution map for every species Includes sections on plumage taxonomy and more **Systematics and Taxonomy of Australian Birds** Les Christidis, Walter Boles, 2008 Lists all those species of birds that have been recorded from the Australian mainland Tasmania island territories and surrounding waters Based on the authors original book The Taxonomy and Species of Birds of Australia and its Territories it includes any new species for which records have been accepted by the Records Appraisal Committee of Birds Australia It also includes all extant and recently extinct post 1800 native species as well as new species accepted vagrants and introduced species that have become established and continue to survive in the wild **Pleistocene Birds of the Palearctic** Tommy Tyrberg, 1998 **From Foraging to Farming in the Andes** Tom D. Dillehay, 2011-02-14 Archeologists have always considered the

beginnings of Andean civilization from c 13 000 to 6 000 years ago to be important in terms of the appearance of domesticated plants and animals social differentiation and a sedentary lifestyle but there is more to this period than just these developments During this period the spread of crop production and other technologies kinship based labor projects mound building and population aggregation formed ever changing conditions across the Andes From Foraging to Farming in the Andes proposes a new and more complex model for understanding the transition from hunting and gathering to cultivation It argues that such developments evolved regionally were fluid and uneven and were subject to reversal This book develops these arguments from a large body of archaeological evidence collected over 30 years in two valleys in northern Peru and then places the valleys in the context of recent scholarship studying similar developments around the world *The Great American Biotic Interchange* Francis G. Stehli, S. David Webb, 2013-03-09 Two rather different elements combine to explain the origin of this volume one scientific and one personal The broader of the two is the scientific basis the time for such a volume had arrived Geology had made remarkable progress toward an understanding of the physical history of the Caribbean Basin for the last 100 million years or so On the biological side many new discoveries had elucidated the distributional history of terrestrial organisms in and between the two Americas Geological and biological data had been combined to yield the timing of important events with unprecedented resolution Clearly when each of two broad disciplines is making notable advances and when each provides new insights for the other the rewards of cross disciplinary contacts increase exponentially The present volume represents an attempt to bring together a group of geologists paleontologists and biologists capable of exploiting this opportunity through presentation of an interdisciplinary synthesis of evidence and hypothesis concerning interamerican connections during the Cretaceous and Cenozoic Advances in plate tectonics form the basis for a modern synthesis and in the broadest terms dictate the framework within which the past and present distributions of organisms must be interpreted Any scientific discipline must seek tests of its conclusions from data outside of its own confines **Quaternary Extinctions** Paul S. Martin, Richard G. Klein, 2002-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone concerned about the ongoing extinction of plants and animals Science Uncommonly readable and varied for watchers of paleontology and the rise of humankind Scientific American Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is

the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967 American Anthropologist

Once a River Amadeo M. Rea, 2021-11-09 Like many rivers of the arid Southwest the Gila is for much of its length a dry bed except after seasonal rains Yet a mere century ago it hosted a thriving biological community and two centuries ago American Indians fished from its banks It is no mystery how the desert swallowed up the Gila Beaver trapping overgrazing and woodcutting first ruined natural watersheds then damming confined the last drops of its surface flow Historical sources and archaeological data inform us of the Gila's past but its bird life further testifies to the changes Amadeo Rea traces the decline of bird life on the Middle Gila in a book that addresses the broader issue of habitat deterioration Bird lovers will find it a storehouse of data on avian migration patterns and on ornithological classification based on skeletal structure Anthropologists can draw on its Piman ethnoclassification of birds which links the Gila River tribe with various other Uto Aztecan peoples of Mexico's west coast But for all concerned with protecting our environment Once a River offers evidence of change that might be apprehended elsewhere It is a case history of a loss that perhaps need never have occurred

Avian Biology Donald Farner, 2012-12-02 Avian Biology Volume VIII assesses selected aspects of avian biology It is generally the conceptual descendant of Marshall's earlier treatise Biology and Comparative Physiology of Birds but is more than simply a revision of it This volume consists of two relatively lengthy diverse chapters that focus on adaptive significance of coloniality in birds and fossil records of birds In particular this volume looks into group phenomena related to central place systems that is systems in which one or more individuals move to and from a centrally located place in the course of daily activities It also addresses selective factors that have been suggested to explain why individuals should form colonies rather than disperse within the available foraging space This book will be useful as a reference material for advanced students and instructors in this field of interest

Wildlife Review, 1979 Avian Paleontology at the Close of the 20th Century Society of Avian Paleontology and Evolution. Symposium, 1999 The 32 papers collected herein reflect the great diversity and interest that the study of fossil birds has generated in recent years The first seven papers Mourer Chauvir et al Worthy and Jouventin Seguí and Alcover Steadman and Hilgarter Millener Worthy Pavia relate to late Quaternary birds from islands where human intervention in the last few thousand years has caused many heretofore unrecorded extinctions Three papers on Quaternary avifaunas of continental Europe deal with distributional changes and cultural use of birds by humans in Siberia Potapova and Panteleyev the utility of patterns of seabird distribution in determining former marine climatic conditions Tyrberg and temporal changes in morphology of ptarmigans Lagopus through the late Pleistocene Stewart Three papers deal with late Cenozoic raptors Campbell et al Tambussi and Noriega Emslie and Czaplewski New genera from Paleogene deposits are described by Boles and Ivison Karhu and Peters Five papers deal with ancient waterfowl Alvarenga describes the first fossil screamer Anhimidae from the Oligocene of Brazil Olson

provides the first fossil records of the Anseranatidae with the description of a new species from the early Eocene of England which is referred to *Anatalavis* from the Paleocene Cretaceous of New Jersey Ericson provides the means to distinguish Eocene fossils of the duck like *Presbyornis* from the flamingo like *Juncitarsus* and gives new records of the latter Benson shows that the Paleocene *Presbyornis isoni* once ranged from Maryland to North Dakota and he gives records of other Paleocene birds from North Dakota Hope names a new larger species of *Graculavus* extending the range of the genus from New Jersey to the Cretaceous of Wyoming The early history and evolution of birds receives great attention Dzerzhinsky expands upon the significance of cranial morphology in paleognathous birds Kurochkin relates the early Cretaceous genus *Ambiortus* to the Chinese *Otogornis* which are supposed to be on a line with modern birds as opposed to the *Enantiornithes* Bochenki uses paleogeography to suggest that the *Enantiornithes* must antedate *Archaeopteryx* Zhou and Martin show that the manus of *Archaeopteryx* is more bird like than previously realized Martin and Stewart use bird teeth to argue against dinosaurian origins for Aves whereas Elzanowski diverges on various aspects of dinosaurian cranial morphology and that of early birds that may have evolutionary significance Witmer Chiappe and Goslow present summaries of three sessions of a roundtable discussion on avian origins early evolution of birds and the origins of flight which was held on June 7 the last day of the meeting and which covered much controversial territory *Wildlife Abstracts*, 1976 **Wildlife Abstracts** U.S. Fish and Wildlife Service, 1983 **South American and Antarctic Continental Cenozoic Birds** Claudia P. Tambussi, Federico Degrange, 2012-12-25 Modern birds *Neornithes* are represented by two big lineages the *Palaeognathae* *Tinamiformes* *Ratitae* and the *Neognathae* *Galloanserae* *Neoaves* *Metaves* *Coronoaves* Both clades sum approximately 10 000 species of which 60% are *Passeriformes* the most diverse clade of terrestrial vertebrates A comparison between the past and the present reveals a complex and hallmarked evolutionary and biogeographic history which would have begun over 65 million years ago For South America SA this includes 1 the presence of taxa with uncertain affinities and the absence of *Passeriformes* during the Paleogene 2 a progressive and accelerated increase of the species starting at the Neogene Miocene 3 important extinct lineages e g *Phorusrhacidae* *Teratornithidae* that migrate to North America after the rising of the Panam isthmus 4 groups with major diversification in the Neogene that survives nowadays represented by scarce species endemic of SA *Cariamidae* or that inhabits mainly in the southern hemisphere *Anhingidae* 5 very diverse living groups with scarce e g *Passeriformes* or none e g *Apodiformes* fossil record in SA which stem groups are registered in Europe Apparently the changes in diversity of the south American *Neornithes* have been the result of successive radiation biogeographic connections with North America and in a minor scale some extinctions The opening of the Drake s passage and the occurrence of the circumpolar Antarctic flow are not sufficient causes to explain the highly disparity between the weddellians penguins *Sphenisciformes* of Antarctica and those of the patagonian Atlantic Ocean *Papers in Avian Paleontology, Honoring Pierce Brodkorb* Society of Avian Paleontology and Evolution. Symposium, 1992 **The Relationships of *Megaoryzomys curioi*, an Extinct Cricetine**

Rodent (Muroidea, Muridae) from the Galápagos Islands, Ecuador David W. Steadman, Clayton Edward Ray, 1982

Megaoryzomys curioi is a thomomyine not an oryzomyine as previously believed This rodent was originally described from three bony fragments found in a cave on Isla Santa Cruz Gal pagos as a new species of the Antillean oryzomyine genus Megalomys The genus Megaoryzomys was named recently for this species based on new material from Isla Santa Cruz Our study of additional material indicates that Megaoryzomys curioi is not closely related to Oryzomys but is most similar to large species of Thomasomys a genus confined to mainland South America The Gal pagos have been colonized by cricetine rodents at least three times once by a thomomyine and twice by oryzomyines Of these colonists Megaoryzomys curioi is the most divergent from mainland relatives and thus is probably derived from the earliest immigrant Although the time of extinction of Megaoryzomys curioi has not been determined and it has never been recorded from life it probably survived into historic time
