Archaeomineralogy George R. Rapp, 2013-03-09 1 1 Prologue What is archaeomineralogy The term has been used at least once before Mitchell 1985 but this volume is the first publication to lay down the scientific basis and systematics for this subdiscipline Students sometimes call an introductory archaeology course stones and bones Archaeomineralogy covers the stones component of this phrase Of course archaeology consists of a great deal more than just stones and bones Contemporary archaeology is based on stratigraphy geomorphology chronometry behavioral inferences and a host of additional disciplines in addition to those devoted to stones and bones To hazard a definition archaeomineralogy is the study of the minerals and rocks used by ancient societies over space and time as implements ornaments building materials and raw materials for ceramics and other processed products Archaeomineralogy also attempts to date source or otherwise characterize an artifact or feature or to interpret past depositional alteration of archaeological contexts Unlike geoarchaeology archaeomineralogy is not and is not likely to become a recognized subdiscipline Practitioners of archaeomineralogy are mostly geoarchaeologists who specialize in geology and have a strong background in mineralogy or petrology the study of the origin of rocks Molecular and Structural Archaeology: Cosmetic and Therapeutic Chemicals Georges Tsoucaris, Janusz Lipkowski, 2012-12-06 Recent progress in the analysis and structural characterisation of materials has an increasing impact on studies of archaeological specimens A need to embody such research into a new interdisciplinary field has appeared In

this ARW we intended to bring together archaeologists and historians with physicists chemists crystallographers and pharmacists around the theme of structural information on complex archaeological materials Within this vast area the ARW has mainly focused on cosmetic therapeutic chemicals The objectives of this NATO ARW were twofold Delineating the contour of molecular and structural archaeology as an emerging interdisciplinary field based on structural analysis at the molecular level Examining novel methodologies to reconstruct the scenario of synthesis and transformation in the long term of compounds used in antiquity for health and beauty The strong interdisciplinarity of this meeting has been greatly favoured by the NATO ARW organisation allowing the mixing of different fields and disciplines with convergent general goals This Workshop has shown that the molecular and structural sensibility is a powerful tool towards the setting and often the solution of difficult archaeological and historical problems Ten different nationalities Europe Egypt USA were represented in the ARW and this mixing has contributed to the large range of subjects and archaeological contexts Thus a mutual interaction between Archaeology and Physical Sciences is expected The most obvious part is associated with extended use of any possible technique and method to get as much information about the archaeological samples as possible Europe Before Rome T. Douglas Price, 2013-02-28 Europe before Rome uses the extraordinary archaeology of prehistoric Europe to explore questions about the origins and evolution of human society **Bronze Age Goldwork** Joan J. Taylor, 1980
