only a snapshot of a moment in time Different populations of the same species can be in different stages in the process of species formation or dissolution In some cases hybridization and introgression can create enormous challenges in interpreting data on genetic distinctions between groups Hybridization is far more common in the evolutionary history of many species than previously recognized As a result the precise taxonomic status of an organism may be highly debated This is the current case with the Mexican gray wolf *Canis lupus baileyi* and the red wolf *Canis rufus* and this report assesses the taxonomic status for each
