*The Reeducation of Race* Sonali Thakkar, 2023-11-28 World War II produced a fundamental shift in modern racial discourse In the postwar period racism was situated for the first time at the center of international political life and race's status as conceptual common sense and a justification for colonial rule was challenged with new intensity In response to this crisis of race the UN and UNESCO initiated a project of racial reeducation This global antiracist campaign was framed by the persecution of Europe's Jews and anchored by UNESCO's epochal 1950 Statement on Race which redefined the race concept and canonized the midcentury liberal antiracist consensus that continues to shape our present In this book Sonali Thakkar tells the story of how UNESCO's race project directly influenced anticolonial thought and made Jewish difference and the Holocaust enduring preoccupations for anticolonial and postcolonial writers Drawing on UNESCO's rich archival resources and shifting between the scientific social scientific literary and cultural Thakkar offers new readings of a varied collection of texts from the postcolonial Jewish and Black diasporic traditions Anticolonial thought and postcolonial literature critically recast liberal scientific antiracism Thakkar argues and the concepts central to this new moral economy were the medium for postcolonialism's engagement with Jewishness By recovering these connections she shows how the midcentury crisis of racial meaning shaped the kinds of solidarities between racialized subjects that are thinkable today

Human Races Prof. Stanley M. Garn, 2017-06-28 First published in 1961 this book provides a contemporary definition of race the distinction between geographical local and micro races as well as consideration of the major evolutionary mechanisms of race formation in man Author Professor Stanley M Garn was and remains a pivotal figure in the history of biological interpretations of race He considered racial classification based on physical traits to be imprecise and believed physical traits to be independent of each other making classification by the assumption that a population shares certain traits incorrect He also argued that racial classifications based on physical type seemingly elevated some physical traits to a racial status but glossed over others and concluded that racial classifications based on physical type can always be compartmentalized into smaller populations which share more physical traits in common Thus here in his book Human Races he used three gradations of racial classification which were increasingly more specific in scope geographical local and micro Human Races is an attempt to describe what race is and the mechanisms of racial differentiation in man It will I hope help to dispel the antiquated notions of three original races of the persistence of racial types and of the role of undirected chance in bringing about racial differences In their stead I trust will emerge the contemporary picture of man s genetic response to local selective factors the constantly changing nature of the natural populations we call races Author s Preface

*Pure Society* André Pichot, 2020-05-05 Amid the eulogies and celebrations commemorating the bicentenary of Charles Darwin s birth the darker side of evolutionary theory should not be forgotten In The Pure Society Andr Pichot one of France s foremost specialists in the history of science excavates the underside of the Darwinian legacy where the notions of race and heredity became powerful tools of malign political agendas and instruments

of social oppression Pichot examines the relationship between science politics and ideology through an analysis of specific cases from Nazism and the concentration camps to the various eugenicist research programmes launched or financed by eminent scientific organizations Racist eugenic ideas were once prevalent among the scientific community despite a patent lack of supporting evidence As today s scientists and writers applaud the advance of science the egregious mistakes made along the way are too often forgotten Now with the mapping of the human genome and rapid advances in gene therapies Pichot warns that biologists are increasingly emboldened to venture into the realms of public policy and politics If moral philosophers abandon these fields it is all too possible that the lights of a misguided science will resurrect the dream of a pure society
