Brodie,2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI

*Readings in Distributed Artificial Intelligence* Alan H. Bond,Les Gasser,2014-06-05 Most artificial intelligence research investigates intelligent behavior for a single agent solving problems heuristically understanding natural language and so on Distributed Artificial Intelligence DAI is concerned with coordinated intelligent behavior intelligent agents coordinating their knowledge skills and plans to act or solve problems working toward a single goal or toward separate individual goals that interact DAI provides intellectual insights about organization interaction and problem solving among intelligent agents This comprehensive collection of articles shows the breadth and depth of DAI research The selected information is relevant to emerging DAI technologies as well as to practical problems in artificial intelligence distributed computing systems and human computer interaction Readings in Distributed Artificial Intelligence proposes a framework for understanding the problems and possibilities of DAI It divides the study into three realms the natural systems approach emulating strategies and representations people use to coordinate their activities the engineering science perspective building automated coordinated problem solvers for specific applications and a third hybrid approach that is useful in analyzing and developing mixed collections of machines and human agents working together The editors introduce the volume with an important survey of the motivations research and results of work in DAI This historical and conceptual overview combines with chapter introductions to guide the reader through this fascinating field A unique and extensive bibliography is also provided

**Readings from AI Magazine** Robert Engelmore,1988 **Readings in Machine Learning** Jude W. Shavlik,Thomas Glen Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth

in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors *Readings in Computer Vision* Martin A. Fischler,Oscar Firschein,1987-06 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume *Selected Readings on Database Technologies and Applications* Halpin, Terry,2008-08-31 This book offers research articles focused on key issues concerning the development design and analysis of databases Provided by publisher **An Introduction to Artificial Intelligence** Kenneth H. Brachman,Hector J. Levesque,2023-10-17 How we can create artificial intelligence with broad robust common sense rather than narrow specialized expertise It s sometime in the not so distant future and you send your fully autonomous self driving car to the store to pick up your grocery order The car is endowed with as much capability as an artificial intelligence agent can have programmed to drive better than you do But when the car encounters a traffic

light stuck on red it just sits there indefinitely Its obstacle avoidance lane following and route calculation capacities are all irrelevant it fails to act because it lacks the common sense of a human driver who would quickly figure out what s happening and find a workaround In Machines like Us Ron Brachman and Hector Levesque both leading experts in AI consider what it would take to create machines with common sense rather than just the specialized expertise of today s AI systems Using the stuck traffic light and other relatable examples Brachman and Levesque offer an accessible account of how common sense might be built into a machine They analyze common sense in humans explain how AI over the years has focused mainly on expertise and suggest ways to endow an AI system with both common sense and effective reasoning Finally they consider the critical issue of how we can trust an autonomous machine to make decisions identifying two fundamental requirements for trustworthy autonomous AI systems having reasons for doing what they do and being able to accept advice Both in the end are dependent on having common sense **Artificial Intelligence in Engineering Design** Christopher Tong,Duvvuru Sriram,2012-12-02 Artificial Intelligence in Engineering Design is a three volume edited collection of key papers from the field of artificial intelligence and design aimed at providing a description of the field and focusing on how ideas and methods from artifical intelligence can help engineers in the design of physical artifacts and processes The book surveys a wide variety of applications in the areas of civil mechanical chemical VLSI electrical and computer engineering The contributors are from leading academic computer aided design centers as well as from industry **Machine Learning Techniques for VLSI Chip Design** Abhishek Kumar,Suman Lata Tripathi,K.
