Readings On Color Vol 2 The Science Of Color:

Readings on Color, Volume 2 Alex Byrne, David R. Hilbert, 1997-05-15 Color is an endlessly fascinating subject to philosophers, scientists, and laypersons as well as an instructive microcosm of cognitive science. In these two anthologies, Alex Byrne and David Hilbert present a survey of the important recent philosophical and scientific writings on color. The introduction to volume 1 provides a philosophical background and links the philosophical issues to the empirical work covered in volume 2. The bibliography in volume 1 is an extensive resource for those doing philosophical work on color. The scientific selections in volume 2 present work in color science that is relevant to philosophical thinking about color; the material is comprehensive and sophisticated enough to be useful to the scientific reader. The introduction to volume 2 is an overview of color science; the volume also contains suggestions for further reading. Bradford Books Imprint

Color Ontology and Color Science Jonathan Cohen, Mohan Matthen, 2010-05-21 Leading philosophers and scientists consider what conclusions about color can be drawn when the latest analytic tools are applied to the most sophisticated color science. Philosophers and scientists have long speculated about the nature of color. Atomists such as Democritus thought color to be conventional, not real. Galileo and other key figures of the Scientific Revolution thought that it was an erroneous projection of our own sensations onto external objects. More recently, philosophers have enriched the debate about color by aligning the most advanced color science with the most sophisticated methods of analytical philosophy. In this volume, leading scientists and philosophers examine new problems with new analytic tools, considering such topics as the psychophysical measurement of color and its implications, the nature of color experience in both normal color perceivers and the color blind, and questions that arise from what we now know about the neural processing of color information, color consciousness, and color language. Taken together, these papers point toward a complete

restructuring of current orthodoxy concerning color experience and how it relates to objective reality Kuehni Jameson Mausfeld and Niederee discuss how the traditional framework of a three dimensional color space and basic color terms is far too simple to capture the complexities of color experience Clark and MacLeod discuss the difficulties of a materialist account of color experience Churchland Cohen Matthen and Westphal offer competing accounts of color ontology Finally Broackes and Byrne and Hilbert discuss the phenomenology of color blindness Contributors Justin Broackes Alex Byrne Paul M Churchland Austen Clark Jonathan Cohen David R Hilbert Kimberly A Jameson Rolf Kuehni Don I A MacLeod Mohan Matthen Rainer Mausfeld Richard Nieder e Jonathan Westphal The Routledge Handbook of Philosophy of Colour Derek H.
