Serge Denisoff, 1995 This accessible guide to the maze of modern sociological theory features a collection of 39 essays written by prominent American and European theorists representing the last fifty years of sociological work **Illness and Power** Brant Wenegrat, 1996-09 Since ancient times physicians have believed that women are especially vulnerable to certain mental illnesses Contemporary research confirms that women are indeed more susceptible than men to anxiety depression multiple personality and eating disorders and several forms of what used to be called hysteria Why are these disorders more prevalent in women Brant Wenegrat convincingly asserts that women's excess risk stems from a lack of social power He reviews women's social power from an evolutionary and cross cultural perspective and places mental disorders in the context of evolution and societal organization In this comprehensive look at mental disorders commonly associated with women Brant Wenegrat convincingly asserts that women's excess risk stems from a lack of social power Biopolitics and Gender Meredith W Watts Jr, 2012-12-06 Here is an important book for social scientists interested in the influence of gender on certain types of behavior Several perspectives are presented on the general topic of biopolitics and gender including the points of view of brain science endocrinology ethology psychophysiology and such conventional interests as political attitudes socialization participation social structure and political hierarchy The

varied and provocative ideas explored in this volume will broaden discussions of gender beyond an exclusive focus on sex links to oppression and discrimination **Communication Yearbook 4** Dan Nimmo,1980-01-01 **Readings for A History of Anthropological Theory** Paul A. Erickson,Liam Donat Murphy,2010-01-01 This comprehensive anthology presents 40 readings that are critical to an understanding of anthropological theory and the development of anthropology as an academic discipline The readings have broad anthropological appeal emphasizing social and cultural anthropology The third edition has been completely revised throughout and organized to work more closely alongside the companion overview text A History of Anthropological Theory It includes six new readings as well as two original essays written by contemporary anthropologists on Why Theory Matters These new essays help ground the more abstract readings in the collection The glossary has been significantly expanded and the discussion questions have been revised The result is a volume that offers not only a strong foundation in the history of the discipline but also a good overview of developments in twentieth and twenty first century anthropological theory including feminist anthropology postmodernity medical anthropology globalization postcolonialism and public anthropology Essential Readings in Evolutionary Biology Francisco J. Ayala,John C. Avise,2014-03-15 Traces scholarly thought from the nineteenth century birth of evolutionary biology to the mapping of the human genome through forty eight essays arranged in chronological order each preceded by a one page essay that explains the significance of the chosen work **Biology as Society, Society as Biology: Metaphors** Sabine Maasen,E. Mendelsohn,P. Weingart,2013-12-01 not lie in the conceptual distinctions but in the perceived functions of metaphors and whether in the concrete case they are judged positive or negative The ongoing debates reflect these concerns quite clearly namely that metaphors are judged on the basis of supposed dangers they pose and opportunities they offer These are the criteria of evaluation that are obviously dependent on the context in which the transfer of meaning occurs Our fundamental concern is indeed the transfer itself its prospects and its limits Looking at possible functions of metaphors is one approach to understanding and elucidating sentiments about them The papers in this volume illustrate by quite different examples three basic functions of metaphors illustrative heuristic and constitutive These functions represent different degrees of transfer of meaning Metaphors are illustrative when they are used primarily as a literary device to increase the power of conviction of an argument for example Although the difference between the illustrative and the heuristic function of metaphors is not great it does exist metaphors are used for heuristic purposes whenever differences of meaning are employed to open new perspectives and to gain new insights In the case of constitutive metaphors they function to actually replace previous meanings by new ones Sabine Maasen in her paper introduces the distinction between transfer and transformation

Good and Evil Edward Farley, What does it mean to be human in a world filled with tragedy With creativity and insight Edward Farley one of today s most respected theologians here addresses this universal and haunting question of evil Farley anchors his discussion firmly in interhuman I thou dynamics as a key to unfolding the personal and social spheres of human

existence It is says Farley the corruption of elemental passions and the resulting contagion of the personal and social spheres that provide a total view of human evil and its redemptive possibilities **Selected Readings in Sociobiology** James H. Hunt,1980 **Meat Planet** Benjamin Aldes Wurgaft,2020-10-13 In 2013 a Dutch scientist unveiled the world's first laboratory created hamburger Since then the idea of producing meat not from live animals but from carefully cultured tissues has spread like wildfire through the media Meanwhile cultured meat researchers race against population growth and climate change in an effort to make sustainable protein Meat Planet explores the quest to generate meat in the lab a substance sometimes called cultured meat and asks what it means to imagine that this is the future of food Neither an advocate nor a critic of cultured meat Benjamin Aldes Wurgaft spent five years researching the phenomenon In Meat Planet he reveals how debates about lab grown meat reach beyond debates about food examining the links between appetite growth and capitalism Could satiating the growing appetite for meat actually lead to our undoing Are we simply using one technology to undo the damage caused by another Like all problems in our food system the meat problem is not merely a problem of production It is intrinsically social and political and it demands that we examine questions of justice and desirable modes of living in a shared and finite world Benjamin Wurgaft tells a story that could utterly transform the way we think of animals the way we relate to farmland the way we use water and the way we think about population and our fragile ecosystem's capacity to sustain life He argues that even if cultured meat does not succeed it functions much like science fiction as a crucial mirror that we can hold up to our contemporary fleshy dysfunctions Behavior Genetics John L. Fuller,Edward C. Simmel,2021-09-30 Originally published in 1983 this volume is a collection of papers by research workers active at the time It includes reviews of special areas within the field and discussions of interactions with other behavioral sciences such as psychology ethology and sociobiology Applications to medicine psychiatry and education are also considered Contributors were encouraged to integrate history present knowledge and projections for the future Although the book is not divided into sections there is some grouping of related chapters **In Search of Human Nature** Carl N. Degler,1992-11-05 Winner of the Pulitzer Prize in History in 1972 and a past president of both the Organization of American Historians and the American Historical Association Carl Degler is one of America's most eminent living historians He is also one of the most versatile In a forty year career he has written brilliantly on race Neither Black Nor White which won the Pulitzer Prize women's studies At Odds which Betty Friedan called a stunning book Southern history The Other South the New Deal and many other subjects Now in The Search for Human Nature Degler turns to perhaps his largest subject yet a sweeping history of the impact of Darwinism and biological research on our understanding of human nature providing a fascinating overview of the social sciences in the last one hundred years The idea of a biological root to human nature was almost universally accepted at the turn of the century Degler points out then all but vanished from social thought only to reappear in the last four decades Degler traces the early history of this idea from Darwin's argument that our moral and emotional life evolved from animals just as our

human shape did to William James's emphasis on instinct in human behavior then seen as a fundamental insight of psychology. We also see the many applications of biology from racism, sexism, and Social Darwinism to the rise of intelligence testing, the eugenics movement, and the practice of involuntary sterilization of criminals, a public policy pioneered in America which had sterilization laws 25 years before Nazi Germany; one such law was upheld by Oliver Wendell Holmes's Supreme Court. Degler then examines the work of those who denied any role for biology who thought culture shaped human nature, a group ranging from Franz Boas, Ruth Benedict, and Margaret Mead to John B. Watson and B. F. Skinner. Equally important, he examines the forces behind this fundamental shift in a scientific paradigm, arguing that ideological reasons, especially the struggle against racism and sexism in America, led to this change in scientific thinking. Finally, Degler considers the revival of Darwinism without the Social Darwinism; racism and sexism led first by ethologists such as Karl von Frisch, Nikolaas Tinbergen, Konrad Lorenz, and Jane Goodall, who revealed clear parallels between animal and human behavior, and followed in varying degrees by such figures as Melvin Konner, Alice Rossi, Jerome Kagan, and Edward O. Wilson, as well as others in anthropology, political science, sociology, and economics. What kind of animal is *Homo sapiens* and how did we come to be this way? In this wide-ranging history, Carl Degler traces our attempts over the last century to answer these questions. In doing so, he has produced a volume that will fascinate anyone curious about the nature of human beings.

Risky Transactions Frank K. Salter, 2002. Trust is a central feature of relationships within the Mafia, oppressed minorities, kin groups everywhere, among dissidents, nationalist freedom fighters, ethnic tourists, ethnic middlemen, exchange networks of Kalahari Bushmen, and families subjected to Stalinist social control. Each of these types of trust is examined by a leading scholar and compared with the expectations of neo-Darwinian theory, in particular the theories of kin selection and ethnic nepotism. The result is a fascinating, theoretically focused yet empirically eclectic contribution to the overlapping fields of human ethnology, evolutionary psychology, and bio-politics. The common thread uniting these diverse phenomena is a trusting relationship predicated on altruism. Chapters examine the strengths and limits of human trust under various stressors and temptations to defect. By exploring the relationship between kin and ethnic altruism and showing its sensitivity to culture, *Risky Transactions* recasts the evolutionary approach to ethnicity as a blend of primordial and instrumental factors.

Human Nature and

Biocultural Evolution Joseph Lopreato, 2024-12-02 First published in 1984 Human Nature and Biocultural Evolution aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author's approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that Homo sapiens is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation
