Priority Nominalism Guido Imaguire, 2018-08-06 This monograph details a new solution to an old problem of metaphysics It presents an improved version of Ostrich Nominalism to solve the Problem of Universals This innovative approach allows one to resolve the different formulations of the Problem which represents an important metaphysical achievement In order to accomplish this ambitious task the author appeals to the notion and logic of ontological grounding Instead of defending Quine's original principle of ontological commitment he proposes the principle of grounded ontological commitment This represents an entirely new application of grounding Some metaphysicians regard Ostrich Nominalism as a rejection of the problem rather than a proper solution to it To counter this the author presents solutions for each of the formulations These include the problem of predication the problem of abstract reference and the One Over Many as well as the Many Over One and the Similar but Different variants This book will appeal to anyone interested in contemporary metaphysics It will also serve as an ideal resource to scholars working on the history of philosophy Many will recognize in the solution insights resembling those of traditional philosophers especially of the Middle Ages

lectures presented at the 5th Metaphysics of Science Workshop held from June 2 to 3 2005 in Ghent Belgium The aim of this volume is twofold First it fields a selection of ongoing discussions on a central topic in contemporary analytical metaphysics Authors were asked to encapsulate their lecture topic into a pr cis highlighting the contesting views accentuating the pro and contra of the main arguments and shedding light on the origin the evolution and the eventual offspring of a respective discussion Second this volume addresses the methodological question by examining what can be learned if we compare these discussions from a methodological perspective What are the red herrings and shortcomings Is an integrated methodology possible Does each discussion finally await a pluralism of plausible positions or will an overall convincing account be expected And finally can analytical metaphysics methodologically assert and investigate their basic assumptions if not from a common sense stance

Intuition Elijah Chudnoff,2013-12-05 We know about our immediate environment about the people animals and things around us by having sensory perceptions According to a tradition that traces back to Plato we know about abstract reality about mathematics morality and metaphysics by having intuitions which can be thought of as intellectual perceptions The rough idea behind the analogy is this while sensory perceptions are experiences that purport to and sometimes do reveal how matters stand in concrete reality by making us aware of that reality through the senses intuitions are experiences that purport to and sometimes do reveal how matters stand in abstract reality by making us aware of that reality through the intellect In this book Elijah Chudnoff elaborates and defends such a view of intuition He focuses on the experience of having an intuition on the justification for beliefs that derives from intuition and on the contact with abstract reality via intuition In the course of developing a systematic account of the phenomenology epistemology and metaphysics of intuition on which it counts as a form of intellectual perception Chudnoff also takes up related issues such as the a priori perceptual justification and knowledge concepts and understanding inference mental action and skeptical challenges to intuition

The Subject of Experience Galen Strawson, 2017-01-19 The Subject of Experience is about the self the person It takes the form of a series of essays which draw on literature and psychology as well as philosophy Galen Strawson discusses the phenomenology of experience of having or being a self What is the character of self experience and the fundamental metaphysics of the self Does the self exist If so what is its nature How long do selves last he develops an approach to the metaphysical questions out of the results of the phenomenological investigation He argues that it is legitimate to say that there is such a thing as the self as distinct from the human being At the same time he raises doubts about how long selves can be supposed to last insofar as they are distinct from human beings He also raises a doubt about whether a self or indeed a human being can really be said to lose anything in dying He criticizes the popular notion of the narrative self and considers the differences between Endurers or Diachronic people who feel that they are the same person when they consider their past and future and Transients or Episodic people who do not feel this He considers the first person pronoun I and a number of puzzles raised by the phenomena of self reference and self knowledge He examines Locke's Hume's and Kant's accounts of the mind and personal identity and argues that Locke and Hume have been badly misunderstood

[Explaining the Mental](#) Michael Beaney, Carlo Penco, 2009-03-26 The aim of this collection of papers is to present different philosophical perspectives on the mental exploring questions about how to define explain and understand the various kinds of mental acts and processes and exhibiting in particular the contrast between naturalistic and non naturalistic approaches There is a long tradition in philosophy of clarifying concepts such as those of thinking knowing and believing The task of clarifying these concepts has become ever more important with the major developments that have taken place over the last century in the human and cognitive sciences most notably psychology sociology linguistics neurophysiology AI and cognitive science itself In all these sciences there is a need to delineate the domain of the mental and to elucidate the key concepts and underlying assumptions This need is widely recognized but approaches and answers vary significantly Some stress the representational features involved in most of our mental processes others the inferential dimension some stress the necessity of using empirical data others the need to refine ideas before pursuing and drawing on empirical research The papers collected in this volume are

Aristotle and Tragic Temporality Sean D. Kirkland,2025 Aristotle and Tragic Temporality treats a theme that has drawn scholarly attention for millennia Aristotle on time and our experience of it It does so however in a wholly unprecedented way grounding its interpretation in his Poetics and Ethics rather than the natural philosophy of the Physics Sean D Kirkland first takes up Aristotle s discussion of our tragic temporal situatedness our having to act think and live always between a determining past we can never fully master and a projected future we can never fully anticipate It is this condition that comes powerfully to light for Aristotle on stage in the performance of a tragic drama The familiar Aristotelian virtue ethics then becomes something radically new in the transforming light of the Poetics temporality an outline of how humans can inhabit that irremediably tragic condition never overcoming or suspending it and arrive nonetheless at something like happiness and excellence **A Companion to David Lewis** Barry Loewer,Jonathan Schaffer,2015-05-04 In A Companion to David Lewis Barry Loewer and Jonathan Schaffer bring together top philosophers to explain discuss and critically extend Lewis s seminal work in original ways Students and scholars will discover the underlying themes and complex interconnections woven through the diverse range of his work in metaphysics philosophy of language logic epistemology philosophy of science philosophy of mind ethics and aesthetics The first and only comprehensive study of the work of David Lewis one of the most systematic and influential philosophers of the latter half of the 20th century Contributions shed light on the underlying themes and complex interconnections woven through Lewis s work across his enormous range of influence including metaphysics language logic epistemology science mind ethics and aesthetics Outstanding Lewis scholars and leading philosophers working in the fields Lewis influenced explain discuss and critically extend Lewis s work in original ways An essential resource for students and researchers across analytic philosophy that covers the major themes of Lewis s work **Time and Ethics** H. L. Dyke,2013-03-09 There is a pressing need for an

investigation into how time and ethics impact on each other This book leads the way in addressing that need The essays in this collection raise and investigate some of the key issues that arise at the intersection between these two areas of philosophy It is for undergraduates postgraduates and professional philosophers

The Routledge Handbook of Metaphysical Grounding Michael Raven, 2020-05-04 Some of philosophy's biggest questions both historically and today are in virtue of questions In virtue of what is an action right or wrong In virtue of what am I the same person my mother bore In virtue of what is an artwork beautiful Philosophers attempt to answer many of these types of in virtue of questions but philosophers are also increasingly focusing on what an in virtue of question is in the first place Many assume at least as a working hypothesis that in virtue of questions involve a distinctively metaphysical kind of determinative explanation called ground This Handbook surveys the state of the art on ground as well as its connections and applications to other topics The central issues of ground are discussed in 37 chapters all written exclusively for this volume by a wide range of leading experts The chapters are organized into the following sections I History II Explanation and Determination III Logic and Structure IV Connections V Applications Introductions at the start of each section provide an overview of the section's contents and a list of Related Topics at the end of each chapter points readers to other germane areas throughout the volume The resulting volume is accessible enough for advanced students and informative enough for researchers It is essential reading for anyone hoping to get clearer on what the biggest questions of philosophy are really asking

Laws and Explanations; Theories and Modal Possibilities Arnold Koslow, 2020-01-01 The book has two parts In the first after a review of some seminal classical accounts of laws and explanations a new account is proposed for distinguishing between laws and accidental generalizations LAG Among the new consequences of this proposal it is proved that any explanation of a contingent generalization shows that the generalization is not accidental The second part involves physical theories their modality and their explanatory power In particular it is shown that 1 Each theory has a theoretical implication structure associated with it such that there are new physical modal operators on these structures and also special modal entities that are in these structures A special subset of the physical modals the nomic modals are associated with the laws of theories 2 The familiar idea that theories always explain laws by deduction of them has to be seriously modified in light of the fact that there are a host of physical theories including for example Newtonian Classical mechanics Hamiltonian and Lagrangian theory and probability theory that we believe are schematic they do not have any truth value Nevertheless we think that there is a kind of non deductive explanation and generality that they achieve by subsumption under a schema

Virtue Epistemology Naturalized Abrol Fairweather, 2014-05-27 This book presents four bridges connecting work in virtue epistemology and work in philosophy of science broadly construed that may serve as catalysts for the further development of naturalized virtue epistemology These bridges are empirically informed theories of epistemic virtue virtue theoretic solutions to under determination epistemic virtues in the history of science and the value of understanding Virtue epistemology has

opened many new areas of inquiry in contemporary epistemology including epistemic agency the role of motivations and emotions in epistemology the nature of abilities skills and competences wisdom and curiosity Value driven epistemic inquiry has become quite complex and there is a need for a responsible and rigorous process of constructing naturalized theories of epistemic virtue This volume makes the involvement of the sciences more explicit and looks at the empirical aspect of virtue epistemology Concerns about virtue epistemology are considered in the essays contained here including the question can any virtue epistemology meet both the normativity constraint and the empirical constraint The volume suggests that these worries should not be seen as impediments but rather as useful constraints and desiderata to guide the construction of naturalized theories of epistemic virtue

Mind Ascribed Bruno Mölder, 2010 This book provides a thoroughly worked out and systematic presentation of an interpretivist position in the philosophy of mind of the view that having mental properties is a matter of interpretation Bruno Molder elaborates and defends a particular version of interpretivism the ascription theory which explicates the possession of mental states with contents in terms of their canonical ascribability and shows how it can withstand various philosophical challenges Apart from a defence of the ascription theory from the objections commonly directed against interpretivism the book provides a critical analysis of major alternative accounts of mental state possession as well as the interpretivist ideas originating from Donald Davidson and Daniel Dennett The viability of the approach is demonstrated by showing how one can treat mental causation as well as the faculties closely connected with consciousness perception and the awareness of one's own mental states in the interpretivist framework Series A

Towards Non-being Graham Priest, 2016 Graham Priest presents an account of the semantics of intentional language which proceeds in terms of objects that may be either existent or non-existent at worlds that may be either possible or impossible This updated second edition includes ten new chapters which develop the ideas of the first edition explore new areas and reply to critics
