Digital Soil Mapping with Limited Data Alfred

E. Hartemink, Alex B. McBratney, Maria de Lourdes Mendonça-Santos, 2008-07-11 Significant technological advances have been few and far between in the past approximately one hundred years of soil survey activities. Perhaps one of the most innovative techniques in the history of soil survey was the introduction of aerial photographs as base maps for field mapping which replaced the conventional base map laboriously prepared by planimeter and alidade. Such a relatively simple idea by today's standards revolutionized soil surveys by vastly increasing the accuracy and efficiency. Yet even this innovative approach did not gain universal acceptance immediately and was hampered by a lack of aerial coverage of the world, funds to cover the costs and in some cases a reluctance by some soil mappers and cartographers to change. Digital Soil Mapping (DSM) which is already being used and tested by groups of dedicated and innovative pedologists is perhaps the next great advancement in delivering soil survey information. However like many new technologies it too has yet to gain universal acceptance and is hampered by ignorance on the part of some pedologists and other scientists. DSM is a spatial soil information system created by numerical models that count for the spatial and temporal variations of soil properties based on soil formation and related environmental variables (Lagacherie and McBratney 2007).

OECD Regional Development Studies Urban-Rural Linkages in Poland OECD, 2022-06-27 The OECD report Urban Rural Linkages in Poland analyses the potential of urban and rural territories for development and improved well-being. Urban and rural areas have different yet often complementary assets and their better integration is important for socio-economic and environmental performance.

Considerations of Territorial Planning, Space, and Economic Activity in the Global Economy Arias Gomez, Helmuth Yesid, Antořová, Gabriela, 2023-01-23 Economic activity is embedded in specific surroundings and ultimately these conditions determine productivity and efficiency. However the use of space in the formal models has been troublesome but in practical activity the territory is a crucial determinant when the agents make economic decisions. The interaction between economic activity, territory and space has become a definitive bedrock in theories throughout the history of thought such as location theory, urban economics and new economic geography. Considerations of Territorial Planning: Space and Economic Activity in the Global Economy analyzes the interaction between territory, economic activity and human development, sharing interesting histories and deploying an extensive set of methodologies, places and points of view. Covering key topics such as territorial planning, urban economics and natural resources, this premier reference source is ideal for economists, policymakers, government officials, industry professionals, researchers, academicians, practitioners, scholars, instructors and students.
