Regulating Competition In Oil:

Regulating Competition Susanna Fellman, Martin Shanahan, 2015-12-22 Cartels trusts and agreements to reduce competition between firms have existed for centuries but became particularly prevalent toward the end of the 19th century. In the mid 20th century governments began to use so called cartel registers to monitor and regulate their behaviour. This book provides case studies from more than a dozen countries to examine the emergence, application and eventual decline of this form of regulation. Beginning with a comparison of the attitudes to regulation that led to monitoring rather than prohibiting cartels, this book examines the international studies on cartels undertaken by the League of Nations before World War II. This is followed by a series of studies on the context of the registers including the international context of the European Union and the importance of lobby groups in shaping regulatory outcomes using Finland as an example. Section two provides a broad international comparison of several countries' registers with individual studies on Norway, Australia, Japan, Germany, Sweden and the Netherlands. After examining the impact of registration on business behaviour in the insurance industry, this book concludes with an overview of the lessons to be learnt from 20th century efforts to regulate competition. With a foreword by Harm Schroter, this book outlines the rise and fall of a system that allowed nations to tailor their approach to regulating competition to their individual circumstances whilst also responding to the pressures of globalisation that emerged after the Second World War. This book is suitable for those who are interested in and study economic history, international economics and business history. Chapter 10 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license.

Louis D. Brandeis and the Making of Regulated Competition, 1900-1932 Gerald Berk, 2009-06-22 This book provides an innovative interpretation of industrialization and statebuilding in the U.S. by tracing the development of regulated competition. Conceptualized by Brandeis and implemented by trade associations and the Federal Trade Commission, regulated competition checked economic power by channeling competition from predation into improvement in products and production processes.

Competition and the Regulation of Utilities Michael A. Crew, 2012-12-06 companies to diversify may outweigh the costs of doing so and that some traditional regulatory concerns may be excessively restrictive. The papers by Hillman, Harris and Jang and Norsworthy, while all relating to individual industries, have lessons for other regulated industries. Hillman's paper, 'Oil Pipeline Rates: A Case for Yardstick Regulation', deals with the important topic of yardstick regulation for oil pipelines. While his application is highly specific, the potential application of yardstick regulation goes beyond oil pipelines. He reviews the evolution in the law regulating oil pipelines. While showing that some progress has been made in introducing economic efficiency considerations into regulation, he provides a careful critique of the operation of existing regulation and suggests an alternative based upon a

yardstick approach His approach seeks to use competitive market prices as the yardstick with administration of price discrimination limited to dealing with possible favoritism to subsidiaries and affiliates Telecommunications Services as a Strategic Industry Implications for United States Public Policy by Harris and Productivity Growth and Technical Change in the United States Telecommunications Equipment Manufacturing Industries by Jang and Norsworthy provide important insights for telecommunications Governments, Competition and Utility Regulation Colin Robinson, Institute of Economic Affairs (Great Britain), London Business School, 2005-01-01 The book is written by a group of academic researchers and practitioners and as such provides insightful analyses from both theoretical as well as practical perspectives It will be of value to policymakers industry stakeholders and regulators who are interested in utility regulation and policies to foster a competitive market environment International Energy Law and Taxation Review Governments Competition and Utility Regulation continues the series of annual books published in association with the Institute of Economic Affairs and the London Business School which critically reviews the state of utility regulation and competition policy The book contains incisive chapters on competition policy and trade antitrust and consumer welfare merger control and efficiency emissions trading Ofcom and convergence energy regulation and competition regulating the London Underground the future of water regulation and European merger control Chapters on each topic are followed by comments from regulators competition authority chairmen and other experts in the relevant fields The book provides analysis of and commentaries on the most significant developments in regulation and competition policy drawing on experiences in Britain the United States and the European Union as well as in international trade negotiations It will be of value to practitioners policymakers and academics who are concerned with regulation deregulation and policies to promote competition *Competition in the Oil Pipeline Industry* Charles J. Nixon's Economy Allen J. Matusow, 1998 Historian Allen J Matusow now presents the first comprehensive history of Nixon s political economy He depicts a president who disliked the subject but was forced to pay attention or lose his dream of effecting a historic realignment of the political parties in America The study derives its authority from extensive archival research in Nixon s presidential papers including notes by Haldeman and Ehrlichman of crucial conversations in the Oval Office Matusow shows the poverty of contemporary economic theory Nixon s willingness to sacrifice the world economy for his domestic political purposes and his desperate

attempts to find something anything that might work Lurching from one set of policies to another Matusow argues Nixon achieved only illusory successes that ultimately brought on a decade of economic disaster

Exploration Laws, Regulation Handbook Volume 1 Strategic Information and Basic Laws IBP, Inc., *The Interplay between European and National Competition Law after Regulation 1/2003* Lúcio Tomé Feteira, 2015-12-08 If we can speak of the European Community's economic constitution we can assert that competition rules together with free movement rules form its core. Notably, implementation of the competition rules enshrined in Articles 81 and 82 EC changed radically with the enactment of Regulation 1/2003 which in effect dispensed with mandatory prior notifications and allowed national authorities to apply Article 101(3) TFEU directly. Given that national legislations perceive certain types of unilateral conduct even if adopted by a non-dominant undertaking as a potential source of anticompetitive effects, an important question concerns the leeway enjoyed by national authorities under the exception to the convergence rule in Article 3(2) of Regulation 1/2003 and the consequent effect on both legal practice and policy issues. In this lucidly argued book focusing on national competition provisions in Germany, France, Italy and the United Kingdom that deal with such conduct, the author provides a detailed examination of how such considerations as the following are affected by Regulation 1/2003: prohibition of abuse of economic dependence or superior bargaining power, the particular susceptibility of long-term contracts, prohibition of resale at a loss or below cost, prohibition of boycott, unlawful pressures, threats and other coercive tactics adopted by undertakings, and the role of unfair competition law. The analysis follows a functional method of comparative legal analysis, reviewing the most relevant norms in the selected jurisdictions, particularly in what concerns their goals and function in the context of their respective legal systems. Special attention is paid to two specific sectors, the motor vehicle and the retailing industries, which have most often triggered relevant legislation and case law in the jurisdictions covered. Legal scholarship in the field is also drawn upon. In its clarification of the meaning of Regulation 1/2003, this book allows practitioners to fully grasp its scope. The author's thorough masterful analysis of the statutory framework of Article 3 of the regulation also reveals the variety of reasons why different Member States have different competition policies on the scope of the exception to the rule of convergence and in this way provides lawyers, policymakers and academics with welcome insights on how major EU jurisdictions apply European competition law.

Governing Law and Dispute Resolution in the Oil and Gas Industry Pereira, Eduardo G., Timonen, Tuuli, Aleynikova, Elina, 2022-08-23 The oil and gas industry's wide international exposure and constantly changing landscape leave it particularly vulnerable to disputes. As this practical book demonstrates, the risks associated with disputes can be mitigated by parties utilising governing law and dispute resolution clauses in contractual agreements within the sector. Examining a global range of jurisdictions, the book offers clear guidance on the most appropriate choice of law and choice of dispute resolution forum for oil and gas contracts, analysing the key issues and defining the legal contours involved.

Leading Issues in Competition, Regulation, and Development Paul Cook, 2004-01-01 The promotion of liberalized

and deregulated markets by bilateral and multilateral aid donors and by global institutions such as the WTO has led to significant attention being paid to competition and regulatory reforms in developing economies The process of reform involves the transfer and diffusion of market models derived from practice and theory in developed countries However in developing countries regulation needs to do more than simply promote competitiveness and consumer interests it also needs to ensure that the market nurtures development By rigorously examining the numerous impacts of regulation this book will help to fill a significant gap in the literature on economic and social development The book now available in paperback draws together contributions from leading experts across a range of disciplines including economics law politics and governance public management and business management The authors begin with an extensive overview of the issues of regulation and competition in developing countries and carefully illustrate the important themes and concepts involved Using a variety of country and sector case studies they move on to focus on the problems of applicability and adaptation that are experienced in the process of transferring best practice policy models from developed to developing countries The book presents a clear agenda for further empirical research and is notable for its rigorous exploration of the links between theory and practice Although there is substantial interest in competition and regulation as yet there has been relatively little investigation of these issues in developing economies This book redresses the balance and will be a valuable resource for researchers academics teachers and students interested in development economics and development studies It will also be of great relevance for practitioners and policymakers working in the fields of competition policy and regulatory reform
