Transcriptional Regulation in the Eukaryotic Cell Cycle John D. McKinney, Nathaniel Heintz, 1991 Physiology of the Gastrointestinal Tract, Two Volume Set Hamid M. Said, 2012-07-04 Physiology of the Gastrointestinal Tract Fifth Edition winner of a 2013 Highly Commended BMA Medical Book Award for Internal Medicine covers the study of the mechanical physical and biochemical functions of the GI Tract while linking the clinical disease or disorder bridging the gap between clinical and laboratory medicine The gastrointestinal system is responsible for the breakdown and absorption of various foods and liquids needed to sustain life Other diseases and disorders treated by clinicians in this area include food allergies constipation chronic liver disease and cirrhosis gallstones gastritis GERD hemorrhoids IBS lactose intolerance pancreatic appendicitis celiac disease Crohn s disease peptic ulcer stomach ulcer viral hepatitis colorectal cancer and liver transplants The new edition is a highly referenced and useful resource for gastroenterologists physiologists internists professional researchers and instructors teaching courses for clinical and research students 2013 Highly Commended BMA Medical Book Award for Internal Medicine Discusses the multiple processes governing gastrointestinal function Each section edited by preeminent scientist in the field Updated four color illustrations

Regulation of G1 Phase Progression Johannes Boonstra, 2003-09-30 In this contribution several specialists describe the current knowledge on the molecular networks that regulate cell cycle progression with an emphasis on the G1 phase of the cell cycle The first part of Regulation of G1 Phase Progression is concerned with the individual molecules that form the network including cyclins cyclin dependent kinases inhibitors of these kinases and retinoblastoma and p53 The second section describes the signaling cascades by which external factors influence the cell cycle network including mitogens the extracellular matrix nutrients and oxygen radicals The last section describes the effects of specific external conditions on cell cycle progression and are presented such as serum starvation and subsequent re addition and stress conditions heat osmolarity The final two chapters describe the relation between cell cycle progression with cell differentiation and with apoptosis

Cell Cycle Control Tim Humphrey, Gavin Brooks, 2008-02-04 The fundamental question of how cells grow and divide has perplexed biologists since the development of the cell theory in the mid 19th century when it was recognized by Virchow and others that all cells come from cells In recent years considerable effort has been applied to the identification of the basic molecules and mechanisms that regulate the cell cycle in a number of different organisms Such studies have led to the elucidation of the central paradigms that underpin eukaryotic cell cycle control for which Lee Hartwell Tim Hunt and Paul Nurse were jointly awarded the Nobel Prize for Medicine and Physiology in 2001 in recognition of their seminal contributions to this field The importance of understanding the fundamental mechanisms that modulate cell

division has been reiterated by relatively recent discoveries of links between cell cycle control and DNA repair growth cellular metabolism development and cell death This new phase of integrated cell cycle research provides further challenges and opportunities to the biological and medical worlds in applying these basic concepts to understanding the etiology of cancer and other proliferative diseases

Post-Transcriptional Processing and the Endocrine System S. L. Chew, Federica Guaraldi, 1999-07 Not much research has been done on the regulation of post transcriptional events much more is known about transcription This book illustrates how hormones may influence post transcriptional nuclear events and that some post transcriptional modification is a requirement for the expression and function of most higher eukaryotic genes Topics such as the regulation of pre mRNA splicing by hormonal signals and tissue specific mechanisms pre mRNA processing during spermatogenesis to the link between the cell cycle and splicing the role of phosphorylation and dephosphorylation in the function of the basal splicing machinery RNA editing the neuroendocrine regulation of polyadenylation all contribute to make up this volume If you are an endocrinologist searching for interesting and important answers unearthed by RNA experiments this book provides them

Handbook of Growth Factors (1994) Enrique Pimentel, 2017-11-22 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail

The Cell Cycle David Owen Morgan, 2007 The Cell Cycle Principles of Control provides an engaging insight into the process of cell division bringing to the student a much needed synthesis of a subject entering a period of unprecedented growth as an understanding of the molecular mechanisms underlying cell division are revealed

Insect Timing D.L. Denlinger, J. Giebultowicz, D.S. Saunders, 2001-06-19 Now that many of the clock genes have been identified it is possible to track daily patterns of clock related mRNAs and proteins to link the entraining light cycles with molecular oscillations within the cell Insect experiments have led the way in demonstrating that the concept of a master clock can no longer be used to explain the temporal organization within an animal Insects have a multitude of cellular clocks that can function independently and retain their function under organ culture conditions and they thus offer a premier system for studying how the hierarchical organization of clocks results in the overall temporal organization of the animal Photoperiodism and its most obvious manifestation diapause does not yet have the molecular underpinning that has been established for circadian rhythms but recent studies are beginning to identify genes that appear to be involved in the regulation of diapause

Models of Cellular Regulation Baltazar Aguda, Avner Friedman, 2008-07-31 This book illustrates the mechanisms and models linking the realms of molecular interactions and biological processes or functions. It addresses the need of mathematical modelers to learn how to formulate models of cellular processes and to understand how quantitative modeling can help sort through the complexities of molecular regulatory networks.

Calcium in Cell Cycles and Cancer James F. Whitfield, 1995-04-24 The second edition of *Calcium in Cell Cycles and Cancer* presents a unique overview of calcium's roles in the several stages of cell cycles initiated by signals from receptors and other kinds of growth factor receptors. This book integrates the actions of calcium and its partner cyclic AMP with those of the growing family of newly discovered stage-specific cyclin-dependent protein kinases of the cell cycle engine. The book also shows calcium to be a terminal, ultimately apoptogenic differentiator of colon and skin cells as well as a major player in lymphocyte selection, activation, and proliferation. This edition relates and explains the dramatic changes in calcium's involvement in the cell cycle and the triggering of terminal differentiation programs that happen during carcinogenesis and are important keys to understanding cancer.
