Communication, Commerce and Power Edward A. Comor,2016-01-06 In this history of US based direct broadcast satellite developments the United States and other nation states are shown to be the ultimate arbiters of their ongoing histories In making this now unfashionable argument Edward A Comor directly challenges recent academic work that tends to privilege global processes over national and argues that the contemporary world order is being shaped primarily by transnational rather than nation state based forces In testing this orientation with empirical research on US foreign communication policy since 1960 Communication Commerce and Power compels academics and policy makers to rethink commonplace assumptions about the characteristics and potentials of the contemporary and future international political economy

Seib,2010 **High Above** Chris Forrester,2011-08-27 Frequently it is suggested that the golden age of television was during the period 1950 1960 It is true that television almost ruined Hollywood s fortunes during this period But if this was the authentic golden age then it was an age of black and white somewhat limited creativity poor reception lack of competition except in the United States and by and large public service broadcasting However if we take 1950 as a generic starting point for modern television broadcasting then we talk about a kind of prehistoric stage of the medium in which it remained for the best part of three decades The younger days of broadcasting were the 1980s the time when commercial television started on a large scale and in this youth was getting younger in terms of programming Luxembourg based SES Astra appeared on the scene at exactly this time Astra was instrumental in the dramatic developments in television that we have witnessed since then This is the story we want to tell in this book Without satellite technology and the success of satellite reception without the resulting mass market penetration of television sets and general economic prosperity we would not have the necessary base ingredients to make the great leap forward into digital into HDTV 3D television and the prospects of Ultra High Definition now in sight **The Use of Airspace and Outer Space for all Mankind in the 21st Century** Chia-Jui Cheng,2023-07-24 The very nature of international air transportation and outer space activities means that they have an international perspective This is more evident today than at any time in the past due to the intensification of trans boundary trade the

internationalization of the division of work and the acceleration of technological progress The Asian Institute of Air and Space Law the Graduate School of Law Soochow University Taipei the International Institute of Air and Space Law Leiden University and the Institute of Air and Space Law McGill University have instituted international conferences in order to provide a world platform for eminent specialists and scholars The Tokyo Conference upon which this excellent collection of papers is based was concerned with a wide range of legal and practical questions arising from regulatory developments in international air transportation and in the exploration exploitation and use of outer space and celestial bodies The main topics of deliberation were megacarriers in the 21st century the need to revise the Bermuda Capacity Formula and the Chicago Convention liability and responsibility in international aviation safety security and environment airline industry competition legal and political aspects of space transportation and manned space flights the protection of the space environment and dispute settlement in air and space law They are discussed in this volume with unparalleled authority A
