Jonassen, Barbara L. Grabowski, 2012-12-06 Written for teachers trainers and instructional designers anyone who is responsible for designing or preparing instruction this book begins with one basic premise individual differences mediate learning at all levels and in all situations That is some learners find it easier or more difficult to learn some skills or to learn from certain forms of instruction because they vary in terms of aptitude cognitive styles personality or learning styles This volume describes most of the major differences in a readable and accessible way and demonstrates how to design various forms of instruction and predict the ease with which learners will acquire different skills Most books that discuss any learner differences focus on those that characterize special education populations whereas this book focuses on normal learners

Designed as a handbook this volume is structured to provide easy and consistent access to information and answers and prescriptions and hypotheses When definitive answers are not possible because there is no research documentation the authors suggest theories designed to stimulate future research

Research with the Locus of Control Construct

Herbert M. Lefcourt, 2013-09-03 Research with the Locus of Control Construct Volume 1 Assessment Methods was created to serve two purposes The first is to fill the researcher's need for information about the application of appropriate locus of control scales to their particular purposes or samples It presents a variety of locus of control scales and describes the relevant research and applications The second purpose for this book involves the general field of personality psychology Often personality constructs emerge occupy center stage for the better part of a decade and then almost silently disappear from view By contrast the locus of control construct has occupied a central position in personality research for a decade The contributions to this volume represent some of the innovations that extend the utility of the locus of control construct to different areas of concern It illustrates a simple principle that a construct continues to be viable only as long as it continues to inspire innovations if it remains static the construct will eventually disappear This book is intended to provide information regarding new developments and to encourage new questions and applications that may allow the locus of control construct to outlive the brief life span that is common among personality constructs It is assumed that the reader is already familiar with the basic literature on locus of control research

Matters in Primary and Middle Schools Tony Charlton, Kenneth David, 2002-09-11 This wide ranging book offers a fresh survey of the pastoral needs of primary age pupils and pupils in early adolescence for both trainee and practising teachers This book is divided into four main sections Principles considers the future needs of children learning processes the planning and implementation of a pastoral programme and the co ordination of personal and social education Aspects of Pastoral Care develops six specific pastoral approaches welfare and liaison health and medical services life crises and counselling managing behaviour bullying and starting secondary school Viewpoints has three personal statements television viewing core values for teachers and parents and the professionalism of teachers In An Agenda for Discussion the editors comment on the various chapters of the book and add extra material on pastoral care and personal and social education The Cognitive Foundations of Personality Traits Shulamith Kreidler, Hans Kreidler, 2013-06-29 Hardly anything in psychology is as irking as

the trait concept Psychologists and laypersons alike use primarily adjective trait names to characterize and even conceptualize the individuals they encounter There are more than a hundred well defined personality traits and a great many questionnaires for their assessment some of which are designed to assess the same or very similar traits Little is known about their ontogenetic development and even less about their underlying dynamics Psychoanalytic theory was invoked for explaining the psychodynamics underlying a few personality traits without however presenting sufficient empirical evidence for the validity of these interpretations In a reductionistic vein behaviorally inclined psychologists have propounded the thesis that all traits are acquired behaviors Yet this view neither reduces the number of personality tests nor explains the resistance of traits to modification by means of reward and punishment Dissatisfied with these and some other less well known approaches to personality traits we decided to explore whether applying our psychosemantic theory of cognition to the trait concept would do better The way we had to follow was anything but easy
