**Eponyms and Names in Obstetrics and Gynaecology** Thomas F. Baskett, 2019-01-24 Presents biographical details of 391 eponyms and names in

the field along with the context and relevance of their contributions      Of Human Born Caroline Arni,2024-03-12 A new history of the concept of fetal life in the human sciences At a time when the becoming of a human being in a woman's body has once again become a fraught issue from abortion debates and surrogacy controversies to prenatal diagnoses and assessments of fetal risk *Of Human Born* presents the largely unknown history of how the human sciences came to imagine the unborn in terms of life before birth Caroline Arni shows how these sciences created the concept of fetal life by way of experimenting on animals pregnant women and newborns how they worried about the influence of the expectant mother's living conditions and how they lingered on the question of the beginnings of human subjectivity Such were the concerns of physiologists pediatricians psychologists and psychoanalysts as they advanced the novel discipline of embryology while at the same time grappling with age old questions about the coming into being of a human person *Of Human Born* thus draws attention to the fundamental way in which modern approaches to the unborn have been intertwined with the configuration of the human in the age of scientific empiricism Arni revises the narrative that the modern embryo is quintessentially an embryo disembedded from the pregnant woman's body On the contrary she argues that the concept of fetal life cannot be separated from its dependency on the maternal organism countering the rhetorical discourses that have fueled the recent rollback of abortion rights in the United States      **Research in Perinatal Medicine I** P.
