Researching Cultural Difference:

Cross-Cultural Research Methods in Psychology David Matsumoto, Fons J. R. van de Vijver, 2010-10-11 Cross cultural research is now an undeniable part of mainstream psychology and has had a major impact on conceptual models of human behavior Although it is true that the basic principles of social psychological methodology and data analysis are applicable to cross cultural research there are a number of issues that are distinct to it including managing incongruities of language and quantifying cultural response sets in the use of scales Cross Cultural Research Methods in Psychology provides state of the art knowledge about the methodological problems that need to be addressed if a researcher is to conduct valid and reliable cross cultural research It also offers practical advice and examples of solutions to those problems and is a must read for any student of culture

Researching 'Race' and Ethnicity Yasmin Gunaratnam, 2003-08-07 Gunaratnam's framework is rich in its examination and synthesis of approaches to the study of race

the reward for the reader who does pick up the book is that the author deftly articulates the complicated view of research on race first from the quantitative perspective and then skilfully moves the reader to issues of race in qualitative research

Studies in Ethnicity and Nationalism This is a welcome book for those engaged in policy and empirical work with an active research agenda there is a level of theoretical sophistication in the text which is often missing from texts concerned with methods in this area

Race Relations Abstracts The particular value of this book to readers lies in the discussion of race ethnicity and research issues within a political and social context The author states her intention to explore some of the theoretical and practical dilemmas of researching race and ethnicity This is without question achieved I recommend it as essential reading for those concerned with increasing their awareness of issues relating to race ethnicity and research

Nurse Researcher This is a thought provoking and challenging book which demonstrated the fractured and fluid nature of difference and power in the research process Importantly it offers a guide to the ways in which research can be effectively and productively used in challenging the status quo

Diversity in Health and Social Care Researching Race and Ethnicity provides an innovative discussion of the methodological epistemological and ethical challenges of doing qualitative research that is informed by questions of race ethnicity and social difference By identifying and challenging categorical thinking and many longstanding assumptions about the meanings of race and ethnicity the author gets to the heart of many of the everyday dilemmas and difficulties that researchers confront in the field but are rarely theorised or openly discussed

Yasmin Gunaratnam's insistence that race and ethnicity are a significant part of all qualitative research and are not the specialist concerns of those whose work is explicitly focussed upon race provokes a radical rethinking of current methodological debates How do racial and ethnic categories inform our approaches to research How does the racialised identity of the researcher and the research participants affect the research interaction and the knowledge that we produce What are the assumptions that are made about racialised subjectivity and inter subjectivity How can we make sense of accounts in which race and ethnicity are silent or are non manifest How can we work ethically across difference In examining these and other questions the wide ranging discussions in the book are animated by examples drawn from the author's ethnographic research with white and minoritized research participants Through these examples readers will be able to engage with some of the complexities of research relationships power relations and ethical concerns about engagement disconnection and complicity in research The attention that the book gives to the excluded experiences of minoritized researchers will be of particular value to many readers

Researching Race and Ethnicity is essential reading for students and academics in the social sciences

Business, and National Culture Sunil Venaik, Paul Brewer, David Midgley, 2023-06-27 Why do different groups of people behave in different ways when dealing with the common challenges of human life? The answer often lies in their cultural attitudes, values, and consequent behaviours. The study of human culture has been deemed a key contribution to understanding human life for many centuries. Explanations and descriptions of cultural characteristics abound, but in the field of business, none have been more influential and warmly embraced than those developed by Geert Hofstede and the GLOBE group. These models of national culture, which characterise Japanese, Americans, French, and many other nationalities in terms of common characteristics such as collectivism, masculinity, and power distance, are most widely cited and applied in business research, teaching, and recommendations for practice. But this seminal work needs a careful reality check. The authors of this book point out a range of problems associated with the Hofstede and GLOBE national culture measures, which bring into question their accuracy and usefulness in meeting the expectations of management culture researchers and students. This book explains in detail why the measures developed by Hofstede and GLOBE are of dubious validity and why they should be viewed with caution by those looking for answers to the complex questions of culture.

The editors have also written an excellent introduction which brings together the key themes of the handbook. The list of contributors is stellar: Steven Durlauf, Throsten Beck, Bob Allen, and includes a diverse mix of Western and non-Western male and female scholars.
