Developing Capacity for Community Governance of Natural Resources Theory & Practice Brian Child & Deborah Wojcik, 2014-05 Community based natural resource management CBNRM is a compelling concept that combines community custodianship of natural resources with sustainable development and poverty reduction However there is a large gap between the conceptual promise and actual performance of CBNRM CBNRM is complex and challenging and one of the major challenges is what we call micro governance how to replace the ubiquitous problem of elite capture within communities with genuine participation and equitable benefit sharing This book is for people want to understand and implement CBNRM governance more effectively including graduate students scholars and practitioners It is targeted most specifically at the scholar practitioner who wants to draw upon micro governance theory to know why and how to work with communities to implement sound local institutions the perspectives and resources presented have been developed and tested over many years working with CBNRM communities in southern Africa the book offers convincing evidence for preferring

participatory democracy over representational forms of governance and discusses how to manage the scale paradox that economies and ecologies are better managed at larger scales but that larger representational institutions invariably forfeit critical public goods like participation and equitable benefit sharing the book's purpose is to provide the reader with the practical tools to operationalize good governance at the village level in ways that are theoretically sound It provides the reader with theoretical insights and practical lessons about micro governance in the context of CBNRM tools for designing and implementing conceptually rigorous community constitutions that enable communities to govern themselves fairly and effectively and resources for developing the management and monitoring systems necessary to protect these conditions

Handbook of Family Violence Alan S. Bellack, Michel Hersen, R.L. Morrison, Vincent B. Van Hasselt, 1987-11-30 In the last decade there has been heightened clinical and investigative activity in the area of family violence This of course is partly attributable to recent surveys showing a high incidence of family violence in the United States For example there are indications that nearly 30% of married women in this country are victims of physical abuse by spouses at some point in their marriage Further FBI statistics show that approximately 13% of all homicides are husband wife killings Moreover it has been projected that such figures are likely to increase over the next several years Consistent with these trends funding of family violence research by both federal and private agencies has increased Indeed federal agencies such as the National Institute of Mental Health and the National Institute of Law Enforcement and Criminal Justice have provided considerable support for work in this area In addition family violence particularly wife battering child abuse and sexual abuse of children has been the focus of media attention at the national level and has generated intensive interest in both lay and professional publications Moreover there have been several recent governmental hearings and investigations regarding the prevalence of these problems

Self-Regulation in Activity Theory Gregory Z. Bedny, Waldemar Karwowski, Inna Bedny, 2018-10-03 Every complex human machine system includes a computer as a critically important means of work However an operator's interaction with a computerized system cannot be reduced to only performing computer based tasks Today human computer interaction HCI is not limited to trained software users People of all ages use all different kinds of gadget

Workers, Power and Society Jens Arnholtz, Bjarke Refslund, 2024-06-03 The book addresses how power and power resources remain important analytically as well as empirically dimensions for analysing contemporary capitalism It provides a theoretical framework for studying understanding and explaining changes in the world of work and how that leads to changes in contemporary capitalist

societies Changes in the world of work are closely related to increasing inequality growing social unrest and societal polarisation Hence the book seeks to deepen our understanding of how developments in the sphere of work have implication far beyond the direct impact on workers The book focuses on how workers and unions utilise their various power resources to off set the power advantage of employers and capital in the sphere of labour politics which have crucial linkages with both cultural life politics and the market Although workers and unions power and influence have been declining almost universally across the world the argument in the book is that they still hold power resources that can challenge and sometimes alter outcomes in another direction than what employers and capital wants Hence the theory can help understand the possibilities that workers and unions still have and how these resources affect the outcomes of the labour capital struggle A core contribution of the book is that it develops theoretical propositions about power resource theory provides clear definitions of the core concepts as well as apply the power resource theory to a range of new or emerging topic fields like global value chains minimum wages and migrant workers
