Gordon Burke, Jill Swanson Reddig, 1976      Strengthening Cooperation over Transboundary Groundwater Resources Gabriel  
Eckstein, Alice Aureli, 2021-12-19 Groundwater is humanity's most vital supply of freshwater Freshwater resources contained  
in aquifer systems globally are two orders of magnitude greater than those found in all rivers lakes and other surface  
freshwaters combined Moreover approximately one half of the world's population today is dependent on groundwater for its  
basic needs While these truisms are widely acknowledged an additional reality is now recognized many of these subsurface  
freshwater reservoirs are actually transboundary formations shared amongst two or more nations In fact around 600  
transboundary aquifers have been identified worldwide They underlie the territory of nearly every non island nation and are  
found in both humid and arid environments Surprisingly though only a handful of transboundary aquifers worldwide are  
subject to any type of formal or informal international agreement Transboundary groundwater resources are now receiving  
growing attention among the international community Questions are being raised about how they should be managed  
allocated and protected what rights aquifer riparians can enjoy and what responsibilities these aquifer states might owe to  
neighbouring aquifer riparians This book considers all these various aspects of the management and regulation of  
transboundary groundwater resources It also presents case studies and explores recent efforts to engage the international  
community on best practices and global standards for governing transboundary aquifers As communities and nations  
continue to expand their reliance on these critical sources of freshwater they will have to address such issues and develop  
governance regimes for these shared subsurface resources The chapters in this book were originally published as a special
