The Faultline of Consciousness David Maines, 2017-09-08 In this compendium of related and cross referential essays David R Maines draws from pragmatist symbolic interactionist assumptions to formulate a consistent new view of the entire field of sociology Suitable for courses in social theory qualitative methods social psychology and narrative inquiry this volume will change the way the general public looks at interpretive sociology This book is organized as an expression of the centrality of interactionism to general sociology Each chapter is designed to articulate this view of the field Symbolic interactionism the way Maines has come to understand and use it is essentially the concerted application of pragmatist principles of philosophy to social inquiry There are four basic elements to this characterization First people transform themselves people are self aware beings who reflexively form their conduct and thus are capable of adjusting their lines of action and creating new ones Second people transform their social worlds human action takes place in contexts of situations and social worlds People can modify the social matrices in which they act and thus people are agents of change Third people engage in social dialogue communication is generic and is at the heart of both stability and change A fourth element is that people respond to and deal with their transformations Humans construct situations and societies they establish social structures and cultures These are the consequences of human action and once formed they reflexively function to direct and channel conduct Maines argues that when people do things together they can create enduring group formations such as divisions of labor rules for inheritance wage labor relations or ideologies These are instances of group characteristics that influence human conduct and indeed are not reducible to the traits of individuals making up the group or society

Behavioural Responses to a Changing World Bob B. M. Wong, Ulrika Candolin, 2025-04-23 For many animals behavioural adjustments represent the first response to human modified conditions By improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change Behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before Clearly behaviour matters But how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a Changing World Challenges and Applications a companion volume to the

first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world

Industrialization as an Agent of Social Change Herbert Blumer, 2018-01-16 Herbert Blumer wrote continuously and voluminously and consequently left a vast array of unpublished work at the time of his death in 1987 This posthumously published volume testifies further to his perceptive analysis of large scale social organizations and elegant application of symbolic interactionist principles Blumer's focus on the processual nature of social life and on the significance of the

communicative interpretation of social contexts is manifest in his theory of industrialization and social change His theory entails three major points industrialization must be seen in processual terms and the industrialization process is different for different historical periods the consequences of industrialization are a function of the interpretive nature of human action and resembles a neutral framework within which groups interpret the meaning of industrial relations and the industrial sector must be viewed in terms of power relations industrial societies contain inherently conflicting interests The editors introductory essay outlines Blumer s metatheoretical stance symbolic interactionism and its emphasis on the adjustive character of social life It places Blumer s theory in the context of contemporary macro theory including world systems theory resource dependence theory and modernization theory Policy Responses to the Interwar Economic Crisis Adnan

Türegün,2022-04-01 This book is about national economic policy responses to the Great Depression of the interwar period Taking off from a generally liberal starting point in the 1920s states diverged greatly in their responses Some were daring while others remained conservative The two groups further differed among themselves in both degree and kind The book gives a certain shape to this messy reality by identifying broad policy patterns paradigms and offers an explanation of it which emphasizes the ideational disposition of policy actors while recognizing the context that limits what they can do More specifically it argues that the ideas held by rulers and the strategies they consequently developed regarding three major groups of interest business labour and most critically agrarians largely determined economic policy variation across nations
